

SUPPLEMENTAL LABELING

(CONTAINS ADDITIONAL INFORMATION WHICH MAY NOT APPEAR ON PACKAGE LABEL)

TRIFLURALIN HF

EPA REG. NO. 34704-792

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Under Paved Surfaces

Directions for Use and Site Preparation: Apply 3 to 4 gallons of Trifluralin HF per acre or 9 to 12 fl. oz. per 1,000 sq. ft. Trifluralin HF should be used only where the area to be treated has been prepared according to good construction practices. If rhizomes, stolons, tubers or other vegetative plant parts are present in the site, they should be removed by scalping with a grader blade to a depth sufficient to insure their complete removal.

Applications should be made only when final grade is established or after additions of base rock. Do not remove soils following Trifluralin HF application and do not apply this herbicide to areas where asphalt is to be laid directly on top of soil.

Paving should follow Trifluralin HF as soon as possible.

Application Directions (Large Areas): Apply Trifluralin HF in sufficient water to insure thorough wetting of the soil surface or penetration of the spray solution through the base rock layer. A minimum of 150 gallons per acre is recommended. Apply with any sprayer that will apply the spray uniformly. Add the recommended amount of herbicide to clean water in the spray tank during the filling operation. Agitate before spraying.

Small Areas: For treating small areas, a tank type hand sprayer or sprinkling can may be used. Before application determine the amount of water and Trifluralin HF necessary to uniformly cover the area to be treated. Shake or stir the spray solution prior to application.

All applicable directions, restrictions and precautions on the EPA-registered label are to be followed.

This labeling must be in the possession of the user at the time of pesticide application.
