RE: Notification of Alternate Brand Name: "Leaf Life Organics Brand Glacial Spray Fluid"

EPA Registration Number: 34704-849 Date of Submission: November 14, 2008

Dear Ms. Baker:

The Agency is in receipt of your Application for Pesticide Notification under Pesticide Registration Notice (PRN) 98-10 dated November 14, 2008, for the product Glacial Spray Fluid. The Registration Division (RD) has conducted a review of this request for its applicability under PRN 98-10 and finds that the actions) requested fall within the scope of PRN 98-10. The label submitted with the application has been stamped "Notification" and will be placed in our records.

If you have any questions, please call me directly at 703-305-6249 or Joyce Edwards of my staff at 703-308-5479.

Sincerely,

Linda Arrington Notifications & Minor Formulations Team Leader Registration Division (7505P)

RE: Glacial Spray Fluid (EPA Reg. No. 34704-849)

Loveland Products, Inc., is submitting this notification under PR Notice 98-10 to add an alternate brand name. The alternate name is Leaf Life Organics Brand Glacial Spray Fluid. Please find the following enclosed.

- 1. Application for Registration.
- 2. 2 copies of the label with the alternate name.

This notification is consistent with the provisions of PR Notice 98-10 and EPA regulations at 40 CFR 152.46, and no other changes have been made to the labeling or the confidential statement of formula of this product. I understand that it is a violation of 18 U.S.C. Sec. 1001 to willfully make any false statement to EPA. I further understand that if this notification is not consistent with the terms of PR Notice 98-10 and 40 CFR 152.46, this product may be in violation of FIFRA and I may be subject to enforcement action and penalties under sections 12 and 14 of FIFRA

If you have any additional questions or concerns, please contact me by telephone 970-347-1468 or scott.baker@uap.com by email.

Sincerely,

Scott Baker

Registration Manager

#### **FIRST AID**

Have the product container label with you when calling a poison control center or doctor or going for treatment.

	Call a poison control center or doctor immediately for treatment advice. Do not give any liquid to a person. Do not give anything to an unconcscious person. Do not induce vomiting unless told to by a poison control center or doctor.
If in eyes:	Hold eye open and rinse slowly and gently with water for 15-20 minutes.     Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.     Call a poison control center or doctor for treatment advice.
If on skin:	<ul> <li>Take off contaminated clothing.</li> <li>Rinse skin immediately with plenty of water for 15-20 minutes.</li> <li>Call a poison control center or doctor for treatment advice.</li> </ul>
If inhaled:	Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.

NOTE TO PHYSICIAN: Petroleum distillate poses aspiration pneurmonia hazard. Only minor irritation should be expected from any type of exposure other than pulmonary aspiration. Ingestion may result in some gastroenteritis and mild diarrhea. Viscosity is such that chemical (hydrocarbon) pneumonia is not a hazard; however, aspiration or lipoid pneumonia of a less severe variety could result from pulmonary aspiration. Since systemic toxicity is not expected, the added risk of aspiration from attempts to induce vomiting or lavage are deemed not warranted.

FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-800-301-7976.

## PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

Harmful if swallowed or absorbed through skin or inhaled. Causes moderate eye imitation. Avoid contact with eyes, skin, or clothing. Avoid breathing spray mist.

#### Personal Protective Equipment:

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category E on the EPA chemical resistance category selection chart.

Applicators and other handlers must wear: long-sleeved shirt and long pants, chemical-resistant gloves, such as barrier laminate, nitrile rubber, neoprene rubber or viton and shoes plus socks.

Follow manufacturer's instructions for cleaning and maintaining PPE. If no

such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

#### Engineering controls statements:

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets with requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

#### **USER SAFETY RECOMMENDATIONS**

Users should:

Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Remove PPE immediately after handling this product. Wash the outside

Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

#### **ENVIRONMENTAL HAZARDS**

This product is toxic to fish. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters. Apply this product only as specified on the label.

#### **DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product through any type of irrigation system. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls, chemical-resistant gloves, such as barrier laminate, nitrile rubber, neoprene rubber or viton and shoes plus socks.

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Keep children and pets out of the treated area until sprays have dried.

#### STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. **PESTICIDE STORAGE**: Keep out of reach of children and animals. Store in original containers only. Store in a cool, dry place and avoid excess heat. Carefully open containers. After partial use, replace lids and close tightly. Do not put concentrate or dilute material into food or drink containers. Do not contaminate other pesticides, fertilizers, water, food, or feed by storage or disposal.

In case of spill, avoid contact, isolate area and keep out animals and

In case of spill, avoid contact, isolate area and keep out animals and unprotected persons. Confine spills. Call collect: CHEMTREC — 1-(800)-424-9300.

1-(800)-424-9300.
To confine spill: If liquid, dike surrounding area or absorb with sand, cat litter or commercial clay. If dry material, cover to prevent dispersal. Place damaged package in a holding container. Identify contents.
PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.
CONTAINER DISPOSAL: Metal: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities. Do not cut or weld metal containers. Plastic:Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

#### MIXING DIRECTIONS

Use only in equipment with sufficient agitation to keep spray thoroughly mixed. Be sure tank is clean. With agitator running, start filling tank with water; add GLACIAL SPRAY FLUID when tank is about ½ full. Pump this mixture through the overflow and back into tank for about two minutes. If this mixture turns white, it indicates good emulsification. Fill the tank with water, adding other desired materials as tank is filling. If wettable powders are used, add and thoroughly mix with water before adding GLACIAL SPRAY FLUID. Addition of an emulsifiable formulation should be done after the GLACIAL SPRAY FLUID and water has been thoroughly mixed. Observe all precautions and limitations on labeling of all products used in mixtures. Keep agitator running at all times. If an injector is used, first add 25 to 50 gals. of water to tank with engine running to provide good pressure. Put injector suction tube into the measured amount of GLACIAL SPRAY FLUID, opening injector valve to allow the GLACIAL SPRAY FLUID to be sucked into the tank, then fill the tank with water

Do not use if this material does not emulsify.

#### APPLICATION INFORMATION

Apply when pests are present and as recommended below. Do not use in undiluted form. Sensitive foliage may be injured.

Evergreens: Glacial Spray Fluid may be used on evergreens, taking into consideration the use precautions noted elsewhere on this label. In order for the spray solution to be effective the target pest and plant should be completely covered. Thorough coverage is essential. Best coverage is achieved with ground equipment using proper spray pressure, gallonage per acre, nozzles, nozzle spacing and tractor speed.

For Vegetables/Plant Virus: Spray at no less than 400 psi using ceramic hollow cone nozzles (ALBUZ® ATR (lilac); HCA (green) color or their equivalent). Adjust the angles of the spray nozzles to achieve complete coverage of the foliage including the lower leaf surfaces. Do not exceed the recommended maximum rates or apply more than recommended.

Preharvest Interval - GLACIAL SPRAY FLUID may be used up to the day of harvest.

To ensure the best coverage, dilute applications (greater than 150 gallons of spray solution per acre) are recommended. Concentrate applications (usually from 20 to 150 gallons of spray solution) may reduce the coverage and thus the effectiveness. Application volumes depend on the crop type, crop size and target pest. Adjust the spray volume to obtain the best coverage without runoff. Extreme care should be taken when using concentrate sprays as the potential for enhanced crop phytotoxicity is increased. A concentrate application can provide satisfactory results as long as the spray unit is properly engineered, calibrated and operated.

AERIAL APPLICATIONS - Dormant and Delayed Dormant Application Only: Apply 3 to 5 gals. in a minimum of 20 gals. of water per acre. Use only as an emergency application when soil conditions or site does not permit regular ground application.

Note: Use efficient equipment of the proper type. Avoid spraying during or immediately prior to hot or freezing weather (over 95°F or under 32°F), hot dry winds, rain or other unsuitable conditions; avoid over spraying or double spraying. Plants should be sprayed only when in vigorous condition and when their moisture cohdition is suitable. Before using, make certain spray tank is free of sulfur residues. Do not apply sulfur within 14 days except in the Northwest (Oregon and Washington) where it may be used in combination on Pears as a Post Harvest (after old fruit is off the tree), Dormant and Delayed Dormant (before the scales slip, or at or prior to bud swell) treatment and on Apples prior to or up to the Delayed Dormant (½ inch green) period. In areas west of the Continental Divide do not apply to Captan treated trees within 90 days after or 60 days before this oil. In areas east of the Continental Divide do not apply to Captan treated trees within 10 to 14 days before and after this oil. If in doubt, spray a portion of one tree previously treated with Sulfur or Captan using 1 quart to 25 gallons water. Burn will show in several days if sufficient time has not elapsed.

This product has not been tested on all species or varieties. Before treating a large area, treat a small area and observe prior to full scale application.

A period of 14 days must elapse before any of the following chemicals are used before or after an application of GLACIAL SPRAY FLUID: chlorothalonil, dicloran, dicofol, permethrin.

Do not use chlorothalonil or dimethoate in a spray program with GLACIAL SPRAY FLUID on grapes, ornamentals and strawberries. Do not use dicofol in a spray program with GLACIAL SPRAY FLUID on ornamentals and strawberries. Do not use propargite with an oil spray or within 30 days before or after an oil spray.

<i>FRUIT AND NUT CR</i> Crop	OPS cont'd.: Pest	Application Rate (gallons of GLACIAL SPRAY FLUID) per 100 gallons of water	Comments
Kiwi	Latania Scale Greedy Scale Oleander Scale San Jose Scale	Use 4 to 6 gallons of oil in a minimum of 100 gallons of water per acre. Use higher rate when scale populations are high.	Do <u>not</u> apply after budbreak. Do <u>not</u> use on weak or stressed vines, or where soil moisture is inadequate.
Mango	Mites Powdery Mildew	Use 1 to 1.5 gallons of oil in 100 gallons of water per acre.	Apply every 2 to 3 weeks as necessary depending on level of pest pressure.
Olive .	Mites Scales	1.5	Prebloom to Postbloom Buckshot.
Papaya	Mites Powdery Mildew Papaya Ringspot Virus	Use 0.75 to 1.5 gallons in 100 gallons of water per acre.	For Powdery Mildew/Mites: Spray every 10 to 14 days depending on the level of pest pressure. For Virus: Initiate spray when seeds are germinated. Spray weekly using 400 psi spray pressure and ceramic hollow cone nozzles.
Peach Nectarine	Aphid (eggs) Mite (eggs) Fruit Tree Leafroller (eggs) San Jose Scale	2-3	Dormant or Delayed Dormant Use higher rates for leafroller and scales.
	Mites Scales	1-2	Summer (foliar or cover) or postharvest.
Pear	Mite (eggs) Pear Psylla Scales Fruit Tree Leafroller	2	Dormant or Delayed Dormant (up to and including petal fall).
	(eggs) Mites Pear Psylla	3 1-2 1,5-2	Summer (foliar or cover) or postharvest.  Do not spray oil sensitive varieties.
Pecan	Aphid (eggs) Mite (eggs) Scales	3	Dormant Do not apply to sensitive varieties or after husk split.
Pineapple	Mealybugs Bud Moth Chinese Rose Beetle	Spray - Use 1 to 2 gallons of oil in 100 gallons of water per acre Dip - Use 1 to 2 gallons of oil in 100 gallons of water, dip for 30 seconds.	Allow fruit to dry for 1 hour before being stored.
Plum Prune	Aphid (eggs) Mite (eggs) Scales	1.5-2	½ inch
	Mites Scales	1-1.5	Summer (foliar to cover) or postharvest.  Do not apply to certain fresh market fruits after bloom starts to form as the oil spray will remove the waxy bloom.  Do not spray oil sensitive varieties.
Strawberries	Leafminers* Mites Powdery Mildew	0.75	Spray at no less than 400 psi using ceramic spray nozzles (ALBUZ® ATR, lilac color or their equivalent).
Valnut	Mite (eggs) Scales	1-2	Delayed Dormant Do not apply to sensitive varieties or after husk split.

<sup>\*</sup>Asterisk denotes crop, pest Not approved in California.

PESTS	APPLICATION RATE & TIMING	COMMENTS
Mites	Apply ½ to 1½ gals, of oil per 100 gals, of water as	
Citrus Red	thorough coverage spray (TC). Alternately, use a low	
-Citrus Rust	volume spray (LV) to apply 1 to 10 gals, of oil per acre.	•
Scale insects	Apply up to 10 gals, of oil per acre on bearing trees up	For Lemons, Limes, Grapefruit and Oranges
-Black	to 10 feet in height. Add 1 gal, of oil per acre for each	(Navels and Valencias).
-Brown Soft	foot of height over 10 feet. Apply as a low volume	
-Citicola	spray (LV) 1 to 10 gals, of oil per acre.	
Purple	1	
-Red		
-Yellow		

Thorough coverage spray (TC): Applications achieving a uniform film wetting of all portions of the tree at 250 to 4500 gallons of spray solution per acre, the total volume is dependent of the size of the trees.

Low-volume spray (LV): Applications with droplet depositions achieved on all interior and exterior parts of the tree using 10 to 100 gallons of spray

Solution per acre.

Do not make an oil spray application within 2 weeks prior to or after an application of sulfur. On Citrus do not make an oil application within 60 days prior to or after an application of sulfur. Do not apply prior to or during period of excessively high summer temperatures. Do not apply oil spray when trees show stress. Consult with your local University of California Coopertive Extension Specialist for proper timing and spray program.

PESTS	APPLICATION RATE-GALS. GLACIAL SPRAY FLUID	COMMENTS
Citrus Rust Mite	5 to 10 gals, per acre. Apply as a dilute spray.	Does not control Citrus Snow Scale.
Spider Mites	5 to 10 gals, per acre. Apply as a dilute spray.	
Scale insects	5 gals. per acre + 6 pints Ethion 4EC.	Summer spray only.
-Black Soft	Apply as a dilute spray.	Observe all applicable precautions on Ethion
-Brown Soft		label.
-Chaff		Do not apply to Navel oranges.
-Glover		T
-Purpie		
-Red		
-Yellow		
Scale Insects	5 to 10 gals, per acre. Apply as a dilute spray.	
-Black Soft		
-Brown Soft		
-Chaff		,
-Glover		
-Purple		
-Red		
-Yellow	1	
Whitefly	5 gals, per acre, Apply as a dilute spray.	
Greasy Spot (Grapefruit)	5 gals. per acre. Apply as a dilute spray.	Tank mix with sufficient copper fungicide to provide 4 lbs. per acre of metallic copper.
Greasy Spot	5 to 10 gals. per acre. Apply as a dilute spray.	If disease pressure is severe, tank mix 4 lbs.
(all other varieties)		(metallic) copper per acre. Do not exceed 5 gals oll if copper used.
Loosening sooty mold	5 to 10 gals, per acre. Apply as a dilute spray.	Use higher rate when disease pressure is heavy

Dilute spray: Apply the GLACIAL SPRAY FLUID application rate in up to 4500 gallons of water per acre, or 30 to 35 gallons per tree, to over 45 gallons per tree for large trees.

Best results can be obtained when the GLACIAL SPRAY FLUID is added to a partially filled spray tank under proper agitation and all foliage is thoroughly covered.

2

Precautions in the use of GLACIAL SPRAY FLUID include: Do not apply GLACIAL SPRAY FLUID when trees are wilting. Do not apply GLACIAL SPRAY FLUID and sulfur within 3 weeks of each other in Florida or Texas. GLACIAL SPRAY FLUID applied after October 1 may increase susceptibility of trees to cold damage and may reduce the fruit crop the following year. GLACIAL SPRAY FLUID applied in the fall may inhibit solids formation in the juice and retard coloring of fruit and should not be applied within 60 days of anticipated harvest. Sensitive foliage may be injured.

Florida growers consult the Florida Citrus Spray and Dust Schedule, or your Agricultural Experiment Station or State Extension Service Specialist for complete details on the spraying program best suited to your locale. Texas growers consult with your Agricultural Experiment Station or State Extension Specialist for complete details on the spraying program suited to your locale.

COFFEE		•
PESTS	APPLICATION RATE-GALS. GLACIAL SPRAY FLUID	COMMENTS
Green Scale	Use 3 to 6 gallons in 100 gallons of water per acre.	Apply when insects appear and treat as necessary
	Use only water as a diluent.	at 30 to 60 day intervals. Do not exceed 18 gallons
•		of oil per acre in a growing season. Do not apply
		within 30 days of harvest when berries are
		handpicked. Oil residues make picking difficult.

Сгор	Pest	Application Rate (ounces per gallon of water)	Comments
Foliage Ornamentals	Aphids		Summer (Foliar or Cover): Do not spray
& Bedding Plants	Adelgids	1-2.5 oz. per gallon	plants during flowering.
Shade Trees** and Shrubs Including Conifers, Deciduous Broadleaf Evergreens &	Aphids Adelgids Eriophyid Mites	Winter Dormant Period: 2.5-4 oz. per gallon	CAUTION: Spray no more than 4 times during the growing season; Use a 2 week minimum application interval. Do not spray when there is obvious moisture
Woody Ornamentals  Ornamental Trees**	Gall Mites Honey Locust Plant Bug		deficit in leaves, or the plant is under stress.  For fall dormant applications, reduce rate to 2 gallons oil per 100 gallons water and limit use only to: American
Shrubs along city Streets, other rights-of-way including	Lace Bug Leaf Beetle (larvae)	Summer (Foliar or Cover):	Red Oak, Japanese Black Pine, Dogwood, Weeping Cherry, Cornelian Cherry, Crabapple, Norway Maple,
onifers, Deciduous and roadleaf Evergreens Leafminer Leafrollers Mealybugs	Leafrollers Mealybugs	1-2.5 oz. per gallon	Purple Plum.  NOTE: May cause discoloration of Blue Spruce. Do not use on conifers or ferns not tolerant to oil sprays. Use
	Psyllids (immature) Red Mites Sawfly (larvae) Scales (immature)		enough spray solution to completely penetrate the leaf canopy and cover both top and bottom of all of the leaves and stems until wet but without significant runoff.
	Spider Mites Webworms Whiteflies		Do not spray during flowering.
Flowering and Foliage Plants including Roses and other	Same as above	Winter Dormant Period:	Do not spray during flowering.
Flowering Shrubs		2.5-4 oz. per gallon	
Christmas Trees **	Scale (soft & hard) (immature)	2-3	Winter
	Spider Mites	0.75-2	Summer -

Use a lower concentration for more sensitive plants.

<sup>\*\*</sup> GLACIAL SPRAY FLUID removes the glaucous (blue) bloom from such evergreens as Colorado Blue Spruce and Koster Spruce. Always use lower dosage or test spray oil sensitive plants such as Cryptomeria, Smoke Tree, Chamaecypris, Juniper, Japanese Holly and Spruce. Tendency toward sensitivity: Red Cedar and Douglas Fir.

GREENHOUSE AND OUTDOOR
Frequency of Application: For the greenhouse pests listed, use once a week initially, then as the pest is controlled, decrease the frequency to every 2-3 weeks as needed.

Application safety during bloom period should be determined for each individual species of plant to be treated by conducting a small test.

Crop	Pest	Application Rate (galions of GLACIAL SPRAY FLUID) per 100 gallons of water	Comments
Ageratum Crown of Thorns Dieffenbachia Ferns Ficus Lisianthus Orchid Palms Petunia	Aphids Fungus Gnats Leafminers Mealybugs Scales (soft & hard) Spider Mites Thrips Whitefly	0.5-1	Due to varietal differences in response to a treatment of GLACIAL SPRAY FLUID at the recommended rate, we recommend conducting a small test on 1 or 2 plants of the specific variety to be treated.
Poinsettia Schefflera Sunflower		·	
Leaf Polish for hardy plants		1	
Aglaonema Aster Aster Azaleas Begonias Browallia Carnation Celosia Chrysanthemum Coleus Cosmos Dusty Miller Easter Lilies Gardenias Gerbera Hellichrysum Hibiscus Foliage Hydrangea Jade Plant Marigold New Guinea Impatiens Nicotonia Philedendron Portulaca Reiger Begonias Snapdragon Zinnias	Aphids Fungus Gnats Leafminers Mealybugs Scales (soft & hard) Spider Mites Thrips Whitefly	1-2	Due to varietal differences in response to a treatment of GLACIAL SPRAY FLUID at the recommended rate, we recommend conducting a small test on 1 or 2 plants of the specific variety to be treated.

Some plants are more sensitive to oil treatments if any of the following conditions are present when application is made: High humidity (74%), an overcast or cloudy day, inadequate air flow, a small greenhouse where the sunlight is magnified causing a fast build-up of temperature and light intensity.
