OFFICE OF PREVENTION, PESTICIDES AND TOXIC SUBSTANCES

FEB 2 4 2009

Scott Baker Registration Manager Loveland Products, Inc. P.O. Box 1286 Greeley, CO 80632-1286

SUBJECT:

Application for Pesticide Notification – Incorporating Soybeans on Section 3

Label and Submitting an Alternate Confidential Statement of Formula (CSF)

Acephate 90 WSP Insecticide

EPA Reg. No. 34704-862

Applications and Alternate CSF Dated March 2, 2007

Dear Mr. Baker:

The Agency is in receipt of your Applications for Pesticide Notification under Pesticide Registration Notice (PRN) 98-10 for the above product. The Registration Division (RD) has conducted a review of these requests for their applicability under PRN 98-10 and finds that the actions requested fall within the scope of PRN 98-10. The label and the Alternate CSF dated March 2, 2007 submitted with the applications are considered "Acceptable", date-stamped "Notification" and will be placed in our records.

If you have any questions, please call me directly at 703-305-6249 or Terri Stowe of my staff at 703-305-6117.

Sincerely,

Linda Arrington

Notifications & Minor Formulations Team Leader

Document Processing Desk (7504P) U.S. Environmental Protection Agency Room S4900, One Potomac Yard 2777 S. Crystal Drive Arlington, VA 22202

Subject:

Acephate 90 WSP Insecticide, 34704-862

Loveland Products, Inc., is submitting 2 notifications for the subject product, one is for an alternate confidential statement of formula adding a currently approved source to our file. The second is to update our label to include uses for soybeans, we have only incorporated this use from a previously approved supplemental label. Please find the following enclosed.

- 1. Application for Registration for each notification.
- 2. Two (2) copies of the alternate CSF.
- 3. Formulators exemption.
- 4. 2 copies of updated label, 1 copy shows the revised text in blue print.
- 5. 1 copy of the previously approved supplemental label.

This notification is consistent with the provisions of PR Notice 98-10 and EPA regulations at 40 CFR 152.46, and no other changes have been made to the labeling or the confidential statement of formula of this product. I understand that it is a violation of 18 U.S.C. Sec. 1001 to willfully make any false statement to EPA. I further understand that if this notification is not consistent with the terms of PR Notice 98-10 and 40 CFR 152.46, this product may be in violation of FIFRA and I may be subject to enforcement action and penalties under sections 12 and 14 of FIFRA.

Please contact me at (970) 347-1468 or by e-mail: scott.baker@uap.com if there are any questions or comments regarding this submission.

Sincerely,

Scott Baker

# ACEPHATE 90 WSP INSECTICIDE

#### MOTERCATION

#### INSECTICIDE IN A WATER-SOLUBLE BAG

# KEEP OUT OF REACH OF CHILDREN CAUTION

See Below For Additional Precautionary Statements.

EPA REG. NO. 34704-862

EPA EST. NO. 51036-GA-001

NET WEIGHT [5] POUNDS

CONTAINS TWO 2½ LBS. WSP PACKETS

EXP 12Y05

# PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS & DOMESTIC ANIMALS

### CAUTION

Harmful if swallowed. Causes eye irritation. Avoid contact with eyes, skin and clothing. Avoid breathing dust or spray mist. Wash hands thoroughly after handling. Do not allow children or pets to come into contact with treated areas until sprays have dried.

#### Personal Protective Equipment (PPE):

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category A on an EPA chemical-resistance category selection chart.

Mixers, loaders, applicators and other handlers must wear: Long-sleeved shirt and long pants, socks and shoes, chemical-resistant gloves, such as Barrier Laminate or Viton, for all mixers and loaders and for applicators using hand held application equipment. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

See engineering controls for additional requirements.

#### **Engineering Controls**

Water-soluble packets when used correctly qualify as a closed mixing/loading system under the Worker Protection Standard for Agricultural Pesticides [40 CFR 170.240(d)(4)].

Mixers and loaders using water soluble packets must: Wear the personal protective equipment required above for mixers/loaders, and be provided and must have immediately available for use in an emergency, such as a broken package, spill, or equipment breakdown the following PPE: Coveralls, chemical-resitant footwear and a NIOSH-approved dust mist filtering respirator with MSHA/NIOSH approval number prefix TC-21C or a NIOSH-approved respirator with any N, R, P, or HE filter.

Pilots must use an enclosed cockpit in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(6)].

The use of human flaggers is prohibited.

#### **USER SAFETY RECOMMENDATIONS**

Users should:

Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

#### **ENVIRONMENTAL HAZARDS**

This pesticide is toxic to birds.

For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

This product is highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds while bees are actively visiting the treatment area.

FIRST AID

FEB 2.4. 2000 hate is an organophosphate, cholinesterase inhibitor. Call poison control center or doctor immediately for treatment If swallowed: advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice. lf on skin Take off contaminated clothing. or clothing: Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice. If inhaled: · Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

NOTES TO PHYSICIAN: This material contains a cholinesterase inhibitor. Measurement

NOTES TO PHYSICIAN: This material contains a cholinesterase inhibitor. Measurement of blood cholinesterase activity may be useful in monitoring exposure but decisions regarding treatment will usually need to be made before test results are available. If signs of cholinesterase inhibition appear, atropine sulfate is antidotal. 2-PAM (PROTOPAM) is also antidotal and may be used in conjunction with atropine but should not be used alone. FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-800-301-7976.

#### **DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR INSECT CONTROL, CROP INJURY, AND/OR ILLEGAL RESIDUES.

Not for indoor residential use.

Do not apply under conditions involving possible drift to food, forage or other plantings that might be damaged or the crops thereof rendered unfit for sale, use or consumption.

#### **Equipment Restrictions:**

Low Pressure Handwand:

General Use Instructions: Do not apply using low pressure handward equipment.

Read Entire Label. Use Strictly in Accordance With Precautionary Statements And Directions, And With Applicable State And Federal Regulations.

For any requirements specific to your State, consult the agency in your State responsible for pesticide regulation.

#### **AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific inctructions, and exceptions pertaining to the statements on this latel about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treat6d a cas curing the restricted-entry interval (REI) of 24 hours.

PPÈ required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything finat has been treated, such as plants, soil or water, is: Coveralls, chemical-resistant gloves made of any waterproof material and shoes plus socks.

....

#### **NON-AGRICULTURAL USE REQUIREMENTS**

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Do not enter or allow others to enter until sprays have dried.

### STORAGE AND DISPOSAL

PROHIBITIONS: Do not contaminate water, food or feed by storage, disposal or cleaning of equipment. Open dumping is prohibited.

STORAGE: Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Store in a cool, dry place. Protect from excessive heat. Do not contaminate food or foodstuffs. Do not store or transport near feed or food. For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC - 1-800-424-9300.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be dis-

posed of on site or at an approved waste disposal facility.

For Water Soluble Packaging: Do not reuse the outer bag. Dispose of outer bag in a sanitary landfill or by incineration, or if allowed by State and local authorities, by burning. If burned, stay out of smoke.

#### **TANK MIXES**

Notice: Tank mixing or use of this product with any other product which is not specifically and expressly authorized by the label shall be the exclusive risk of user, applicator and/or application advisor.

Read and follow the entire label of each product to be used in the tank mix with this product.

#### **CHEMIGATION**

Apply to Cranberries only by sprinkler irrigation systems. Do not apply by chemigation to any other crop, or this crop using any other type of irrigation system.

#### WATER SOLUBLE PACKAGING

#### Multiple Packaging

This bag contains multiple water-soluble packets of this product. Do not handle the packets with wet gloves or allow the packets to become wet prior to addition to spray tank. Do not break open packets. Refer to the Tables of Equivalents to calculate the number of packets to use. If all packets are not used, close and reseal outer container to protect remaining packets(s).

This bag contains one water-soluble packet of this product. Do not handle the packet with wet gloves or allow the packet to become wet prior to addition to spray tank. Do not break open packets. Refer to the Tables of Equivalents to calculate the number of packets to use. Open outer bag by pulling perforated tear strip and drop the unopened inner packet of this product into spray tank.

#### Preparation of Spray Solution

To prepare spray solution, drop the unopened packet(s) of Acephate 90 WSP into a spray tank containing at least one-half the total quantity of water required. Direct water at the floating packet(s) and continue to add water with the agitator running until the spray volume is reached. Do not add any liquid fertilizers, micronutrients or adjuvants to the spray solution until after the packet and its contents have completely dissolved. Water soluble packet(s) should completely dissolve in approximately five minutes. Dissolution rate may be slowed by cold water, lack of agitation, or water containing high concentrations of boron or sulfur.

#### **TABLE OF EQUIVALENTS**

Rates of _ Acephate 90 WSP Per Acre	Acres Treated by a 2.5 lb. WSP Packet

3.25 oz.	12.3
0.25 lb.	10
0.28 lb.	` 8.9
0.5 lb.	5
0.56 lb.	4.5
0.8 lb.	3.1
1.0 lb.	2.5
1.1 lb	23

#### **GENERAL INFORMATION**

Acephate 90 WSP, a soluble powder, is an insecticide for control of pests on selected agricultural crops and in certain non-crop areas. The active ingredient in this product is acephate, a water-soluble insecticide readily absorbed by plant roots and foliage to give systemic control of feeding insects. Insect pests are generally controlled more effectively by this product through ingesting than by contact. Application of this product to maintain control should be repeated only as directed.

To ensure that Acephate 90 WSP, a soluble powder, is compatible with the variety or cultivar of the listed ornamental crops under your specific conditions, test the product on a limited scale and observe for phytotoxicity over two weeks before making large-scale applications. The large number of existing ornamental varieties and cultivars coupled with the constant introductions of new variants precludes specific testing of each type. It

is impossible to field test this product in every locale where sold or in all of the combinations created by differences including those in soil or media type, pH, moisture or fertility, environmental conditions such as temperature, lighting or degree days and horticultural practice including planting dates, control of other pests, timing of various horticultural practice and the manner of use and application of this product.

#### SPRAY DRIFT MANAGEMENT

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

- 1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
- Nozzies must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees. Where states have more stringent regulations, they shall be observed. The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

#### Importance of Droplet Size

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperty, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions section of this label).

#### **Controlling Droplet Size**

- Volume Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- Pressure Use the lower spray pressures recommended for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of nozzles Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- Nozzle Type Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the larger droplets than other nozzle types.

#### Boom length

For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

#### Application

Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

#### Swath Adjustment

When applications are made with a crosswind, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.)

Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

#### Temperature and Humidity

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

#### Temperature Inversions

Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which cauces small suspended high. Temperature inversions restrict vertical air mixing, which causes shall suspensed droplets to remain in a concentrated cloud. This chord can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altifude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if or a standard inversion can also be indicated by ground fog; however, the specific properation can also be indicated by ground fog; however, the specific properation can also be indicated. is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) Indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas).

User should comply with all applicable directions, restrictions and precautions on the EPA registered label for Danitol 2.4 EC Spray.	21
Do not apply more than 1.0 lb ai/A for aerial application to cotton in California and Arizona or 0.75 lb ai/A for other states.	Armyworm (Excluding Beet Armyworm) Bollworm Cabbage Looper Cotton Aphid Cutworms Fleahopper Grasshopper Pink Bollworm Plantbugs (Lygus, Mirids) Salt Marsh Caterpillar Thrips (Including Western Flower Thrips) Tobacco Budworm Whitefly (Excluding Sweetpotato/Silverleaf Whitefly)	Acephate 90 WSP + LORSBAN® 4E	0.28 to 1.1 lbs. + 1 to 2 pts.	User should comply with all applicable directions, restrictions and precautions on the EPA registered label for LORSBAN 4E.  Cutworms: Use of 0.8 lb/A Acephate 90 WSP By Ground: Ground application is recommended.  Control is most effective when ground application is made in the evenings and sprays are directed toward the base and lower portion of plant.  By Air: Aerial applications are less effective, but find 62 used.  Apply when insects first appear or when damage is first noted and repeat application as necessary to maintain control.	

Resistance Management

Cotton pest control programs, especially those for control of Silverleaf Whitefly populations, should employ a properly designed resistance-management strategies include mixture or rotation of alternative classes of chemistry including organophosphates, carbamates, pyrethroids or insect growth regulators. Consult your state or area agricultural extension service for local resistance management strategies and advice on alternative insecticides.

# 80412

#### **COTTON TANK MIXES WITH PYRETHROIDS**

General Use Precautions:

Do not feed gin trash or treated forage to livestock.

Do not allow livestock to graze on treated areas.

\*\*Minimum 3 days spray interval for up to 0.5 lb ai/A and 7 days for rates greater than 0.5 lb ai/A.

\*\*Do not apply more than 4 lbs. ai/A per season. This includes the use of Payload 15 Granular as an in-furrow at planting treatment, all foliar spray, liquid in-furrow application.

Synthetic Pyrethroids should be used within the guidelines of state and/or regional resistance management programs and recommendations.

Always read and follow all label directions when using any pesticide alone or in tank mix combinations. Observe all restrictions and precautions which appear on all product labels. The most restrictive labeling applies when using a tank mix.

#### Resistance-Management

Cotton pest control programs, especially those for control of Silverleaf Whitefly populations, should employ a properly designed resistance-management strategy. Such resistance-management strategies include mixture or rotation of alternative classes of chemistry including organophosphates, carbamates, pyrethroids or insect growth regulators. Consult your state or area agricultural extension office for local resistance management strategies and advice on alternative insecticides.

#### **CRANBERRY**

Application Method	Pests Controlled	Rates of Acephate 90 WSP Per Acre	Remarks	Days To Harves
Follar By Ground or Sprinkler: Sufficient water to give thorough coverage. By Air: Minimum of 2 gals./A of spray	Cranberry Blossom Worm Cranberry Cutworm Gypsy Moth False Armyworm Fireworms Spanworms Sparganothis	1.1lbs. (17.6 oz.)	Sprinkler Irrigation Application To Cranberries: This product may only be applied through sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, travelers, big gun, solid set, or hand move. Do not apply this product through any other type of irrigation system.  Crop injury, lack of effectiveness, or illegal pesticide residues in the crop may result from non-uniform distribution of treated water.	90
Use Precaution: Note: Limit to one application per po not apply more than 1.1 lbs/A Do not apply from start of bloom u	(1 lb. ai) per season.		If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.	

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the label prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection number.

The pesticide injection pipeline must also contain a functional, normally closed solenoid-operated valve located on the intake side of the injection primp and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure ceres to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

Per Acre

Pests Controlled

Rates of Acephate 90 WSP
Per Acre

Days To Harvest

Solid Set System: Apply specified dosage for the entire length of the irrigation period or for a 30 to 60 minute period at the end of a regular irrigation set or as a 30 to 60 minute injection as a separate application not associated with a regular irrigation. Allow time for all lines to flush the pesticide through all nozzles before turning off irrigation water. To ensure the lines are flushed and free of remaining pesticide, a dye indicator may be injected into the lines to mark the end of the application period. See Note.

Center Pivot Systems: Inject the specified dosage per acre continuously for one complete revolution of the system. See Note.

Note: Constant agitation must be maintained in the chemical supply tank during the entire period of insecticide application. Inject the product with a positive displacement pump into the main line ahead of a right turn to ensure adequate mixing.

Application of more than label-recommended quantities of irrigation water per acre may result in decreased product performance by removing the chemical from the zone of effectiveness.

**HEAD LETTUCE - Crisphead Type Only** 

Application Method	Pests Controlled	Rates of Acephate 90 WSP Per Acre	Remarks	Days To Harves
Follar By Ground: 10 to 60 gals./A of spray broadcast By Air: Minimum of 5 gals./A of spray	Aster Leafhopper Green Peach Aphid Armyworms (excluding Beet Armyworm) Cabbage Looper	0.5 to 1.1 lbs. (8 to 17.6 oz.) 1.1 lbs. (17.6 oz.)	Repeat application as necessary to maintain control.*	Spring, Summer and early Fall crops in all areas, Winter crops in Florida and Texas, late Fall crops in Arizona and Winter crops in Arizona and California.

#### Use Precautions:

\*Do not apply more than 2.2 lbs./A (2 lbs. ai) per season. Minimum 3 days spray interval for up to 0.5 lb ai/A and 7 days for rates greater than 0.5 lb ai/A. Do not feed trimming to livestock or allow animals to graze on treated areas.

AZ & CA, Desert Areas: Do not apply after first head begins to form in crops which germinate from mid-September through November.

#### MINT

#### PEPPERMINT AND SPEARMINT

Application Method	Pests Controlled	Rates of Acephate 90 WSP Per Acre	Remarks	Days To Harves
Foliar By Ground: 20 to 100 gals./A of spray By Air: 5 to 10 gals./A of spray	Alfalfa Looper Aphids Cutworms	1.1 lbs. (17.6 oz.)	Apply when eggs or insects first appear.  Make one repeat application, if necessary, to maintain control.*	14
Foliar By Ground: 40 to 100 gals/A of spray	Strawberry Root Weevil Adult Black Vine Weevil Adult	1.1 lbs. (17.6 oz.)	Strawberry Root and Black Vine Weevil: For control, apply in water in a minimum of 40 gals. spray per ace by ground. Good spray coverage and canopy spray penetration is critical for control. Increase spray volume and pressure with tall or dense mint canopy. Apply after adult emergence is complete but prior to egg laying. Apply at dusk or during the night on a warm still evening. Two applications 10-14 days apart may be necessary to reduce heavy infestations.	14

Use Precautions For All Application Methods:

\*Do not apply more than 2.2 bs/A (2 bs. ai) per season. Minimum 3 days spray interval for up to 0.5 lb ai/A and 7 days for rates greater than 0.5 lb ai/A. Do not graze treated areas.

#### **NON-BEARING CITRUS**

#### CITRUS

General Use Precautions

Do not graze treated areas.

Do not harvest citrus for one year after treatment.

Minimum 3 days spray interval for up to 0.5 lb ai/A and 7 days for rates greater than 0.5 lb ai/A. Table 10. Non-Bearing Citrus - Recommendations for Use

Table 10. Non-Bearing Citrus - Recommendations for Use cont'd.: **Application Method** Pests Controlled Rates of Remarks Acephate 90 WSP Per Acre Spray individual juvenile or non-bearing trees for coverage with total application not to exceed specified rate in lbs. per acre. Length of residual activity will depend upon spray coverage and the amount of moisture following application. Apply 1 gal. of mix to each mound area by sprinkling the mound until it is wet and treat Soil Mound Treatment Ants (Including Imported 0.8 oz./5 gals. **Drench Method** Fire Ants and Harvester a four (4) foot diameter circle around the mound. Repeat application as necessary to maintain control Ants)

#### **NON-CROP AREAS**

Field Borders, Fencerows, Roadsides, Ditchbanks, Borrow Pits

Application Method	Pests Controlled	Rates of Acephate 90 WSP Per Acre	Remarks
Foliar By Ground: 10 to 20 gals./A of spray By Air: 1 to 5 gals./A of spray	Grasshoppers	0.25 lb. (4 oz.)	For early to mid-season application. Use the higher volumes when spraying dense toliage. An approved drift retardant may be added to aid in controlling drift and reducing evaporation of aerial sprays.

#### Use Precaution:

Do not graze or feed vegetation cut from treated areas. Minimum 3 days spray interval for up to 0.5 lb ai/A and 7 days for rates greater than 0.5 lb ai/A

#### **WASTELAND**

Application Method	Pests Controlled	Rates of Acephate 90 WSP Per Acre	Remarks	
Foliar By Ground: 10 to 20 gals./A of spray	Black Grass Bugs Grasshoppers Mormon Crickets	1.6 to 2.2 oz.	Use the higher volumes when spraying dense foliage.  An approved drift retardant may be added to aid in controlling drift and reducing evaporation of aerial sprays.	

#### Use Precaution:

(minimum of 5 gals./A in CA)

Do not make more than one application per season. Do not graze or feed vegetation cut from treated areas.

Do not allow animals to graze on treated areas.

#### DEANLITE

Application Method	Pests Controlled	Rates of Acephate 90 WSP Per Acre	Remarks	Days To Harves
Follar By Ground: 10 to 50 gals/A of spray By Air: 5 to 10 gals/A of spray	Grasshoppers Thrips  Corn Earworm Fall Armyworm Leafhoppers Loopers Velvetbean Caterpillar	0.25 to 0.5 lb. (4 to 8 oz.) 0.4 to 0.8 lb. (6.4 to 12.8 oz.) 0.8 to 1.1 lbs. (12.8 to 17.6 oz.)	Apply when eggs or insects first appear. Repeat application as necessary to maintain control.* This product can be tank mixed with registered at-cracking and early post-emergence peanut herbicides, provided those products do not prohibit tank mixes, provided the most restrictive of label limitations and precautions are observed, and provided no label dosage rates are exceeded. To determine physical compatibility, pour the recommended proportions of each chemical with the same proportion of water as will be present in the chemical supply tank into a suitable container, mix thoroughly and allow to stand for five minutes. If the combination remains mixed, or can be remixed readily, the mixture is considered physically compatible. When mixing wettable powder or dry flowable formulations, add and disperse these first, then add liquid pesticides. Conduct another compatibility test at concentrations which will be present in the irrigation lines. If there is any separation, which cannot be remixed readily, Loveland Products, Inc. recommends that the combinations should be kept agitated and should be applied immediately. Do not allow combinations to set for prolonged periods in the chemical supply tank or irrigation lines.	

#### Use Precautions:

Do not feed treated forage or hay to livestock.

Do not allow animals to graze on treated areas.

\*Do not apply more than 4.0 lbs. a.i. (4.4 lbs. formulated product) per acre per crop cycle. This includes the use of this product on peanuts as a foliar spray in addition to the peanut planter box seed treatment use. Minimum 3 days spray interval for up to 0.5 lb ai/A and 7 days for rates greater than 0.5 lb ai/A.
