Date: March 15, 2006

Enclosure

RESTRICTED USE PESTICIDE Due to Toxicity to Fish and Aquatic Organisms

For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator's certification.

CYFLU

ACCEPTED with COMMENTS In EPA Letter Dated MAR 1 5 2006 Under the Federal Insecticide. Fungicide, and Rodenticide Act. as amended, for the pesticide registered under EPA Reg. No. 24704-917

Emulsifiable Pyrethroid Insecticide For control of certain insect pests on field, vegetable, tree and vine crops.

ACTIVE INGREDIENT:

Cyfluthrin

÷.

#### Cyano (4-fluoro-3-phenoxyphenyi)methyi-3-

(2,2-dichloroethenyi)-2,2-dimethyl-cyclopropanecarboxylate ........... 25% INERT INGREDIENTS TOTAL

Contains 2 lb Cyfluthrin per gallon. (This product contains aromatic petroleum distillates.)

# **KEEP OUT OF REACH OF CHILDREN** DANGER—PELIGRO

# PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER: Corrosive. Causes irreversible eye damage. Do not get in eyes or on clothing. Wear protective eyewear (goggles or face shield). Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. May be fatal if inhaled. Do not breathe vapors or spray mist, Harmful if swallowed or absorbed through skin. Prolonged or frequently repeated skin contact may cause allergic skin reactions in some individuals.

Do not contaminate feed or food. Keep out of reach of children.

Personal Protective Equipment; Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category G on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear: Long-sleeved shirt and long pants, chemical-resistant gloves, such as barrier laminate or viton, shoes plus socks, and protective evewear.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this products concentrate. Do not reuse them. Follow manufacturers instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

# Engineering Controls Statements

Liser should:

11/05

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

# USER SAFETY RECOMMENDATIONS

Wash hands before eating, drinking, chewing gurn, using tobacco or using the toilet. Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

# ENVIRONMENTAL HAZARDS

This pesticide is extremely toxic to fish and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from treated areas. Drift and runoff from treated areas may be hazardous to aquatic organisms in neigh-boring areas. Do not contaminate water when disposing of equipment washwaters. This product is highly taxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops if bees are visiting the treatment area. Additional information may be obtained by consulting your Cooperative Extension Service,

#### PHYSICAL OR CHEMICAL HAZARDS

Do not use or store near heat or open fiame.

# **DIRECTIONS FOR USE**

Restricted Use Pesticide Pit is a violation of Federal law to use this product in a manner inconsistent with its labeling. ------> Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any Aspen pr shicks delay this requirements specific to you State or Tribe, consult the agency responsible for pesticide regulation.

# AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains/restricted-entry interval./The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is: Coverails, chemical-resistant gloves, such as barrier laminate or viton, shoes plus socks, and protective eyewear.

# STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. **PESTICIDE STORAGE:** Store in a cool, dry place and away from open flame and extreme heat. Store in such a manner as to prevent cross contamination with other pesticides, fertilizers, food and feed. Store in original container and out of the reach of children, preferably in a locked storage area.

Handle and open container in a manner as to prevent spillage. If container is leaking, invert container to prevent leakage. If the container is leaking or material spilled for any reason or cause, carefully dam up spilled material to prevent runoff. Refer to Precautionary Statements on label for hazards associated with the handling of this material. Do not walk through spilled material. Absorb spilled material with absorbing type compounds and dispose of as directed for pesticides below. In spill or leak incidents, keep unauthorized people away. **PESTICIDE DISPOSAL:** Pasticide wastes are acutely hazardous. Improper dispos-

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or finsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance. CONTAINER DISPOSAL – NON-REFILLABLE CONTAINER: Triple rinse (or

CONTAINER DISPOSAL – NON-REFILLABLE CONTAINER: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration or, if allowed by state and local authorities, by burning, if burned, stay out of smoke.

CONTAINER DISPOSAL - RETURNABLE/REFILLABLE SEALED CONTAINER: Do not rinse container. Do not break seals. Replace the dust cover/cap and return container, intact to point of purchase.

For help with any spill, leak, tire or exposure involving this material, call day or night CHEMTREC - 1-800-424-9300.

Cyflu may be used for control of a broad spectrum of insect pests by contact action. Because of this contact activity, good spray coverage of the crop is needed for the highest level of control.

#### Insect Resistance Statement

Some insects are known to develop resistance to products used repeatedly for control. Because the development of resistance cannot be predicted, the use of this product should conform to resistance management strategies established for the use area. Consult your local or State agricultural authorities for details. If resistance to this product develops in your area, this product alone may not continue to provide adequate control of resistant pests. If poor performance cannot be attributed to improper application, extreme weather conditions, etc., a resistant strain of insect may be present. If you expenence difficulty with control and resistance is a reasonable cause, immediately consult your local company representative or agricultural advisor/state Extension agent for the best alternative method of control in your area. Consult your state Cooperative Extension Service agent or agricultural advisor for insect resistance management strategies and recommended insect control methods in your area.

# APPLICATION GUIDELINES

For all insects, timing of application should be based on careful scouting and local economic thresholds.

#### Foliar Spray Application

Foliar applications may be made using properly calibrated ground sprayers, fixed- or rotary-winged aircraft or through properly designed, sprinkler-type, chemigation equipment (See Chemigation Application directions below). Thorough and uniform coverage of plants, with direct contact of the spray mixture to the target pests, is required for satisfactory control.

Avoid application procedures where thorough coverage of plant is not possible. Applications made with less than thorough coverage may result in slower activity and/or less overall control from a single application than an application made with higher gallonages. See general, Spray Drift Reduction Management, section below for application guidelines on minimizing drift from al application methods.

Ground applications should be made in a minimum of 10 gallons/A.

Aerial applications should be made in a minimum of 2 gallons/A, however 5 gallons/A are recommended. See crop specific gallonage requirements. Aerial applications made to dense canopies may not provide sufficient coverage of lower leaves to provide pest control. Higher labeled rates of Cyflu may be necessary for aenal applications.

Chemigation applications (See Chemigation Application directions below) should be made as concentrated as possible. For best results apply at 100% input/travel speed, for center pivots or 0.10 inch (2,716 gallons) up to 0.15 inch (4,073 gallons) of water/A, for other systems. Higher labeled rates of Cyflu may be necessary for chemigation applications.

#### **Chemigation Application**

Types of Irrigation Systems: Cyliu may be applied through sprinkler type irrigation systems, only. These types include; center pivot, lateral move, or solid set irrigation systems. Do not apply Cyllu through any other type of irrigation system.

Injection for Chemigation: Inject the specified dosage of Cyllu into the irrigation main, water stream: (1) through a constant flow, metering device; (2) into the center of the main line flow via a pitot tube or equivalent; (3) at a point ahead of at least one, right-angle turn in main stream flow such that thorough mixing with the irrigation water is ensured.

Uniform Water Distribution and System Calibration: The irrigation system must provide uniform distribution of Cyflu treated water. Crop injury, lack of effectiveness, or illegal pesticide residues in or on the crop can result from non-uniform distribution. The system must be calibrated to uniformly distribute the rates specified for chemigation application to specific crops. If you have questions about calibration, contact your Cooperative Extension Service agent, equipment manufacturers, or other experts.

Chemigation Monitoring: A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Required Injection and Sprinkler System Safety Devices: The system must contain a functional check valve, vacuum relief valve, and low pressure drain, appropriately located on the imigation pipeline to prevent water source contamination from back-flow. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor/engine stops, or in cases where there is no water pump, when water pressure decreases to the point where pesticide distribution is adversely affected. Injection systems must use a metering pump or equivalent, such as a positive displacement injection pump (e.g., diaphragm pump, venturi injection) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Public Water Systems: DO NOT APPLY CYFLU THROUGH ANY IRRIGATION SYS-TEM PHYSICALLY CONNECTED TO A PUBLIC WATER SYSTEM. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Cyflu may be applied through any of the recommended types of irrigation systems that may be supplied by a public water system only if the water from the public water system is discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe. Before beginning chemigation, always make sure that the air gap exists and that there is no blockage of the overflow of the reservoir tank. Any irrigation system using water supplied from a public water system must also meet the same safety requirements as for any other type of water supply and include the same safety devices.

Chemical Supply Tank Dilution and Agitation: For injection of Cyllu use a chemical supply tank for pre-mixing Cyllu with either, water or non-emulsifiable oil before injecting mixture into the irrigation line. Dilution ratio should be at least 4 parts of ether water/or non-emulsifiable oil, to 1 part Cyllu. If necessary, constant mechanicai or hydraulic agitation should be maintained in the chemical supply tank during the entire period of application. Determine the required amounts of Cyllu and either water or non-emulsifiable oil, to mix in the tank. The amount of Cyllu needed equals the number of fluid ounces of Cyllu to be applied per acre multiplied by the number of acres to be chemigated. The amount of emulsion needed equals the galons of emulsion delivered per hour by the injection pump, multiplied by the number of hours chemigation will take place. The amount of either water or non-emulsifiable oil needed equals the amount of emulsion needed minus the amount of Cyflu needed.

Posting Requirements: Posting of areas to be chemigated is required when 1) any part of a treated area is within 300 féet of sensitive areas such as residential areas, labor cemps, businesses, day care centers, hospitals, in-patient cinics, nursing homes or any public areas such as schools, parks, playgrounds, or other public facilities not including public roads, or 2) when the chemigated area is open to the public such as golf courses or retail greenhouses.

Posting must conform to the following requirements: Treated areas shall be posted with signs at all usual points of entry and along likely routes of approach from the listed sensitive areas. When there are no usual points of entry, signs must be posted in the corners of the treated areas and in any other location affording maximum visibility to sensitive areas. The printed side of the sign should face away from the treated area towards the sensitive area. The signs shall be printed in English. Signs must be posted prior to application and must remain posted until foliage has dried and soil surface water has disappeared. Signs may remain in place indefinitely as long as they are composed of materials to prevent deterioration and maintain legibility for the duration of the posting period.

All words shall consist of letters at least 2-1/2 inches tall, and all letters and the symbol shall be a color which sharply contrasts with their immediate background. At the top of the sign shall be the words KEEP OUT, followed by an octagonal stop sign symbol at least 8 inches in diameter containing the word STOP. Below the symbol shall be the words PESTICIDES IN IRRIGATION WATER.

This sign is in addition to any sign posted to comply with the Worker Protection Standard.

Cleaning the Chemical Injection System: In order to apply pesticides accurately, the chemical injection system must be kept clean; free from chemical or fertilizer residues and sediments. Refer to your owner's manual or ask your equipment supplier for the cleaning procedure for your injection system.

Flushing the Irrigation System: At the end of the application period, allow time for all lines to flush the pesticide through all nozzles before turning off irrigation water. To ensure the lines are flushed and free of pesticides, a dye indicator may be injected into the lines to mark the end of the application period.

Center-Pivot and Automatic-Move Linear Systems: Inject the specified dosage per acre continuously for one complete revolution (center pivot) or move of the system. The system should be run at maximum speed. It is recommended that nozzies in the immediate area of control panels, chemical supply tanks, pumps and system safety devices be plugged to prevent chemical contamination of these areas. The use of END GUNS is NOT recommended. End guns that provide uneven distribution of treated water can result in crop injury, lack of effectiveness, or illegal pesticide residues in or on the crop.

Solid Set and Manually Controlled Linear Systems: Injection should be during the last 30 to 60 minutes of a regular irrigation period or as a separate 30 to 60 minute application not associated with a regular irrigation.

#### OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES; RESERVOIRS; RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS; ESTUARIES AND COMMERCIAL FISH FARM PONDS.

#### Spray Drift Reduction Management

Do not apply when wind speed favors drift beyond the area intended for treatment. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions. Avoiding spray drift is the responsibility of the applicator.

#### **Buffer Zone Requirements**

Ground, Foliar Applications: Do not apply by ground within 25 feet of lakes; reservoirs; rivers; permanent streams, marshes or natural ponds; estuaries and commercial fish farm ponds. Increase the buffer zone to 450 feet when an ultra low volume (ULV) application is made.

Aerial Applications: Do not apply by air within 150 feet of lakes; reservoirs; rivers; permanent streams, marshes or natural ponds; estuaries and commercial fish farm ponds. The spray boom should be mounted on the aircraft so as to minimize drift caused by wing tip vortices. The minimum practical boom length should be used, and must not exceed 75% of the wing span or rotor diameter.

Importance of Droplet Size: An important factor influencing drift is droplet size. Small droplets (<150 to 200 microns) drift to a greater extent than large droplets. Within typical equipment specifications, applications should be made to deliver the largest droplet spectrum that provides sufficient control and coverage. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible and by avoiding excessive spray boom pressure. Spray should be released at the lowest possible height consistent with good pest control and flight safety. Applications more than 10 feet above the crop canopy should be avoided.

Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and high temperature.

Wind Speed Restrictions: Drift potential increases at wind speeds of less than 3 mph (due to inversion potential) or more than 10 mph. However, many factors, including dropiet size, canopy and equipment specifications determine drift potential at any given wind speed. Do not apply when wind speeds are greater than 15 mph and avoid gusty and windless conditions. Avoiding applications when wind direction is toward the aquatic area can reduce nsk of exposure to sensitive aquatic areas.

Restrictions During Temperature Inversions: Do not make aerial or ground applications during temperature inversions. Drift potential is high during temperature inversions. Temperature inversions restrict vertical air mixing, which causes small, suspended droplets to remain close to the ground and move laterally in a concentrated cloud. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog. However, if fog is not present, the movement of smoke from a ground source can also identify inversions. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical mixing.

#### Runoff Management

Do not cultivate within 10 feet of the aquatic areas to allow growth of a vegetative filter strip. When used on erodible soils, best management practices for minimizing runoff should be employed. Consult your local Soil Conservation Service for recommendations in your use area. Do not apply if soil is saturated with water. Do not apply under conditions that favor drift from runoff. Do not apply in the rain.

# **FIELD CROPS**

Recommended Applications – Cyflu For all crops, apply specific dosage of Cyflu at early threshold for target pests, as poputation begins to develop. Degree of control or suppression of additional labeled pests will be determined, in part by the stage of pest development at application and infestation level of those pests.

Application timing should be based on local economic thresholds. Use the higher rates for moderate to heavy insect pressure. Lower rates are generally adequate for low to moderate insect pressure but require careful scouting and may require more frequent application.

Cyllu is an Emulsifiable Concentrate formulation and is active by contact and ingestion. Thorough coverage is necessary for optimum performance. See application recommendations at the beginning of each section: FIELD CROPS, VEGETABLE CROPS; TREE and VINE CROPS.

#### ALFALFA

| Pests Controlled                   | Rate fluid ounces/Acre_ | Rate lbs Al/Acre |
|------------------------------------|-------------------------|------------------|

| Pea aphid                          |                         |                  |

Whitefly (adult)

Notes: Pre-Harvest interval (PHI) or Pre-Grazing Interval: 7 days.

Maximum Cyflu allowed per cutting: 2.8 fluid ounces/A (0.044 lbs Al/Acre). Maximum Cyflu allowed per crop season: 12.8 fluid ounces/A (0.200 lbs Al/Acre) Maximum number of applications per season: 4. Minimum application volume (water): 10.0 GPA – ground, 2.0 GPA –aerial application.

Minimum application volume (water): 10.0 GPA – ground, 2.0 GPA –aerial application. Minimum ULV application volume (once refined cotton seed/vegetable oii): 1.0qt/A – aerial apolication.

Due to potential injury to bees, do not apply to alfalfa grown for seed.

Do not apply to mixed stands with intentionally-grown forage grasses.

See CHEMIGATION statement in Application Guidelines section of this label.

#### CORN

Field Corn, Popcorn, Seed Corn (see Sweet Corn recommendations in Vegetable Ornes Section)

| Pests Controlled                       | Rate fluid ounces/Acre | Rate Ibs Al/Acre |

 2.8
 0.044

 Notes:
 Pre-Harvest Interval (PHI):
 For grain or fodder 21 days;
 Green forage may be fed 0 days after last application.

Maximum Cyflu allowed per 7-day interval: 2.8 fluid ounces/A (0.044 ibs Al/Acre). Maximum Cyflu allowed per crop season: 11.2 fluid ounces/A (0.175 ibs Al/Acre). Maximum number of application per season: 4. Three applications may be applied up to early dent stage. One application may be made between early dent and 21 days before harvest.

# EPA REG. NO. 34704-

# Com cont'd .:

Minimum application volume (water): 10.0 GPA - ground, 2.0 GPA - aerial application. Minimum ULV application volume (once refined cotton seed/vegetable oil): 1.0 qt/A - aerial application.

See CHEMIGATION statement in Application Guidelines section of this label. Application must be made prior to the larva boring into the plant.

#### **CORN soil pests**

Field Corn, Popcorn, Seed Corn

| Pests Controlled | Rate fluid<br>ounces/1000 row ft | Rate fluid<br>ounces/acre<br>(based on 30 inch row spacing) |
|------------------|----------------------------------|---|
| Seedcorn maggot  |                                  |   |
| Wireworm         | 0.12-0.16                        | 2.0-2.8   |
| Pest Suppressed  |                                  |   |
| White arub       | 0.14-0.16                        | 25-28   |

Note: Pre-Harvest Interval (PHI): For grain or fodder 21 days; Green forage may be fed 0 days after last application.

Maximum Cyflu allowed per 7 day interval: 2.8 fluid ounces/A (0.044 lbs. Al/Acre). Maximum Cyllu allowed per crop season: 11.2 fluid ounces/A (0.175 lbs Al/Acre). **APPLICATION INSTRUCTIONS:** 

Carrier Cyflu may be applied in water or in liquid pop-up fertilizer at planting. Apply in a minimum of 2 GPA of total mix volume when applied in water. Good agitation must be maintained at all times during application.

Instruction for liquid pop-up fertilizer application: Perform a compatibility test prior to mixing the entire tank to ensure that Cyflu will remain in solution while applying. Take a known amount of the fertilizer to be used as a carrier and place in a glass jar. Add the appropriate amount of Cyflu based on the labeled use rate. Add other components to be tank mixed. Gently agitate the solution. Examine the solution for signs of incompatibility such as flocculation, precipitation, separation, etc. If incompatibility occurs contact your local Loveland Products Inc. representative for additional information.

Fertilizers containing zinc have been shown to be incompatible with Cyflu and should not be mixed with Cyllu

Placement: Total mix volume should be applied in the open furrow ahead of the closing wheels for optimum coverage.

Row width adjustment: The above rate calculations are based on a standard 30 inch row spacing. For row spacing of less than 30 inches, adjust the rate of Cyflu not to exceed 2.8 fluid ounces/A (0.044 lbs Ai/Acre). Diminished control may occur when rates are decreased below the recommended minimum rates per 1000 row feet.

#### COTTON

| Pests Controlled                   | Rate fluid ounces/Acre | Rate lbs Al/Acre |

Notes: Pre-Grazing or Foraging Interval: 7 days. Pre-Harvest Interval (PHI): 30 days. Maximum Cyflu allowed per 3-day interval: 2.4 fluid ounces/A (0.038 lbs Al/Acre) Maximum Cyflu allowed per crop season: 4.8 fluid ounces/A (0.076 lbs Al/Acre) Maximum number of applications: 2

Minimum application volume (water): 10.0 GPA - ground; 2.0 GPA - aerial application. Minimum ULV application volume (cotton seed/vegetable oil); 1.0 qt/A -

aerial application. See CHEMIGATION statement in Application Guidelines section of this label.

\*For best control, applications must be made prior to insects damaging the plants. Use the higher rate range and increased water volume for applications occurring after plant damage has taken place or following booting in order to receive better coverage. Once damage occurs or plant growth stage reaches booting, control may be limited to suppression only.

\*Use not permitted in CA unless accompanied by supplemental label.

# **VEGETABLE CROPS**

Recommended Applications - Cyflu For all crops, apply specific dosage of Cyflu at early threshold for target pests, as population begins to develop. Degree of control or suppression of additional labeled pests will be determined, in part by the stage of pest development at application and infestation level of those pests.

Application timing should be based on local economic thresholds. Cyflu may be applied before, during, or after planting. Use the higher rates for moderate to heavy insect pressure. Lower rates are generally adequate for low to moderate insect pressure but require careful scouting and may require more frequent application.

Cyflu is an Emulsifiable Concentrate formulation and is active by contact and ingestion. Thorough coverage is necessary for optimum performance.

See application recommendations at the beginning of each section: FIELD CROPS, VEGETABLE CROPS; TREE AND VINE CROPS.

#### COLE CROPS

Includes all members of Crop Subgroup 5A such as, but not limited to: Broccoli, Chinese (gal lon) broccoll, Brussels sprouts, Cabbage, Chinese (napa) cabbage, Chinese mustard (gal choy) cabbage, Cauliflower, Cavalo broccoli, Kohirabi, Mustard greens and Turnip Greens.

Minimum application volume (water): 10.0 GPA - ground; 2.0 - aerial application. Minimum ULV application volume (once refined cotton seed/vegetable oil: 1.0 qt/A aerial application.

See CHEMIGATION statement in Application Guidelines section of this label.

# **TREE and VINE CROPS**

Recommended Applications - Cyflu

For tree and vine crops, application rates should be based on the Tree or Vine, Row-Volume/Density concept for either dilute or concentrate applications. For determining product required in concentrate applications, first determine amount of spray volume per acre necessary to spray-to-drip in a dilute application in a grove, yard, vineyard, or orchard. Based on this volume, calculate required formulation quantities per acre. Apply equivalent amount per acre for concentrated sprays. For orchard/vineyard airblast applications, do not spray above trees/vines and turn off outward pointing nozzles at row ends and outer rows.

Cyflu is an Emulsifiable Concentrate (EC) formulation and is active by contact and ingestion. Thorough coverage of foliage and fruit is necessary for optimum performance.

For all crops, apply specific dosage of Cyllu at early threshold for target pests, as population begins to develop. Degree of control or suppression of additional labeled pests will be determined, in part by the stage of pest development at application and infestation level of those pests.

Application timing should be based on local economic thresholds. Use the higher rates for moderate to heavy insect pressure. Lower rates are generally adequate for low to moderate insect pressure but require careful scouting and may require more frequent application.

See application recommendations at the beginning of each section: FIELD CROPS; VEGETABLE CROPS; TREE and VINE CROPS.

## CITRUS (California and Arizona, Only)

Includes all members of Crop Group 10 such as, but not limited to:

Calamondin, Citrus citron, Citrus hybrids (includes chironja, tangelo, and tangor), Grapefruit, Kumquat Lemon, Lime, Mandarin (tangerine), Orange (sweet and sour), Pummeio, Satsuma mandarin, Tangelo, White sapote, and other cultivara and/or hybrids of these.
