Greeley, CO 80634

Subject: Registration Review Label Mitigation for Paraquat Dichloride
Product Name: LPI 6620 PARAQUAT 3SL
EPA Registration Number: 34704-1117
Application Date: September 30, 2021
Decision Number: 578829

Dear Ms. Trostle:

The Agency, in accordance with the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended, has completed reviewing all the information submitted with your application to support the Registration Review of the above referenced product in connection with the Paraquat Dichloride Interim Decision, and has concluded that your submission is acceptable. The label referred to above, submitted in connection with registration under FIFRA, as amended, is acceptable.

Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

A stamped copy of your labeling is enclosed for your records. This labeling supersedes all previously accepted labeling. You must submit one copy of the final printed labeling before you release the product for shipment with the new labeling. In accordance with 40 CFR 152.130(c), you may distribute or sell this product under the previously approved

Page 2 of 2
EPA Reg. No. 34704-1117
Decision No. 578829

labeling for 12 months from the date of this letter. After 12 months, you may only distribute or sell this product if it bears this new revised labeling or subsequently approved labeling. "To distribute or sell" is defined under FIFRA section 2(gg) and its implementing regulation at 40 CFR 152.3.

If you have any questions about this letter, please contact Carolyn Smith by phone at (202) 566-2273, or via email at smith.carolyn@epa.gov.

Sincerely,

Handwritten signature of Kelly W. Sherman in cursive script.

Kelly Sherman
Chief, Risk Management and Implementation

Pesticide Re-Evaluation Division
Office of Pesticide Programs

Enclosure

[Note to reviewer: [Text] in brackets denotes optional text].

[Note to reviewer: {Text} in braces denotes where in the final label text will appear.]

{BOOKLET FRONT PANEL / LANGUAGE ON LABEL AFFIXED TO CONTAINER}

Restricted Use Pesticide

Due to acute toxicity. To be used by certified applicators only – NOT to be used by uncertified persons working under the supervision of a certified applicator, except that uncertified person may transport containers as provided under Directions for Use.

ACCEPTED

Aug 24, 2022

Under the Federal Insecticide, Fungicide and Rodenticide Act as amended, for the pesticide registered under EPA Reg. No. 34704-1117

PARAQUAT DICHLORIDE | GROUP 22 | HERBICIDE

LPI 6620 Paraquat 3SL

[Alternate Brand Name: PARAQ]

Defoliant and desiccant herbicide for the control of weeds and grasses and as a harvest aid.

ACTIVE INGREDIENT

Paraquat dichloride: (1,1'-dimethyl-4,4'-bipyridinium dichloride): 43.2%

OTHER INGREDIENTS: 56.8%

TOTAL 100.0%

Contains 3.0 pounds paraquat cation per gallon as 4.14 pounds of paraquat dichloride salt per gallon.

Contains emetic and stench (odor).

KEEP OUT OF REACH OF CHILDREN

DANGER

POISON

READ ENTIRE LABEL PRIOR TO USING THIS PRODUCT IN THE CASE OF AN ACCIDENT, SEEK IMMEDIATE MEDICAL ATTENTION.

SYMPTOMS ARE PROLONGED, PAINFUL, AND CAN BE FATAL.

If you do not understand the label, find someone to explain it to you in detail.

MANTENER FUERA DEL ALCANCE DE LOS NIÑOS

PELIGRO

VENENO

LEA LA ETIQUETA COMPLETA ANTES DE USAR ESTE PRODUCTO. EN CASO DE ACCIDENTE, BUSQUE ATENCIÓN MÉDICA INMEDIATA.

LOS SÍNTOMAS SON PROLONGADOS, DOLOROSOS, Y PUEDEN SER MORTALES.

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.

- IF SWALLOWED, TAKE IMMEDIATE ACTION AS PRESCRIBED IN FIRST AID. SYMPTOMS ARE PROLONGED AND PAINFUL.
- CORROSIVE TO SKIN AND EYES. / CORROSIVO PARA LA PIEL Y LOS OJOS.
- NEVER TRANSFER THIS PRODUCT INTO FOOD OR BEVERAGE CONTAINERS OR CONTAINERS NOT EXPLICITLY INTENDED FOR PESTICIDES. / NUNCA TRANSFERIR ESTE PRODUCTO A RECIPIENTES PARA COMIDA O DE BEBIDAS O RECIPIENTES NO EXPLÍCITAMENTE PREVISTOS PARA PLAGUICIDAS.
- DO NOT USE OR STORE IN OR AROUND THE HOME.
- DO NOT REMOVE CONTENTS EXCEPT FOR IMMEDIATE USE.
- THE ODOR OF THIS PRODUCT IS FROM THE STENCHING AGENT WHICH HAS BEEN ADDED, NOT FROM PARAQUAT.

FIRST AID	
Contains Paraquat, a Bipyridylum Herbicide. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.	
If Swallowed:	<ul style="list-style-type: none">• Call a poison control center or doctor IMMEDIATELY for treatment advice.• SPEED IS ESSENTIAL. Immediate medical attention is required. If available, give an adsorbent such as activated charcoal, bentonite or Fuller's Earth.• Have person sip a glass of water if able to swallow.• Do not induce vomiting unless told to by a poison control center or doctor.• Do not give anything by mouth to an unconscious person.
If Inhaled:	<ul style="list-style-type: none">• Move person to fresh air.• The odor of this product is from the stenching agent, which has been added, not from the paraquat.• If person is not breathing, call 911 or an ambulance.• Call a poison control center or doctor for treatment advice.
If in Eyes:	<ul style="list-style-type: none">• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.• Call a poison control center or doctor for treatment advice.
If on Skin or Clothing:	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15 to 20 minutes.• Call a poison control center or doctor for treatment advice.
NOTE TO PHYSICIAN: Administer either activated charcoal (100 g for adults or 2.0 g/kg body weight in children) or Fuller's Earth (15% solution; 1.0 liter for adults or 15.0 ml/kg body weight in children). NOTE: The use of gastric lavage without administration of an adsorbent has not shown any clinical benefit. Do not use supplemental oxygen. Eye splashes from concentrated material should be treated by an eye specialist after initial treatment. With the possibility of late onset corneal ulceration, it is advised that patients with paraquat eye injuries are reviewed by an eye specialist the day after first presentation. Use treatment that is appropriate for chemical burns. Intact skin is an effective barrier to paraquat; however, contact with irritated or cut skin or repeated contact with intact skin may result in poisoning.	
Have the product container or label with you when calling a poison control center or doctor or going for treatment.	
For 24-hour medical emergency assistance (human or animal) call 1-866-944-8565.	
For chemical emergency assistance (spill, leak, fire, or accident) call ChemTrec at 1-800-424-9300.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER/PELIGRO

POISON/VENENO

May be fatal if swallowed. Fatal if inhaled. Corrosive. Causes irreversible eye damage. Harmful if absorbed through skin. Do not breathe spray mist. Do not get in eyes, on skin, or on clothing. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

IMPORTANT: Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal irritation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

Personal Protective Equipment (PPE)

Applicators and other handlers (other than mixers and loaders) must wear:

- Long-sleeved shirt and long pants
- Waterproof gloves, except wear chemical-resistant gloves (Barrier Laminate, Nitrile Rubber \geq 14 mils, Neoprene Rubber \geq 14 mils, or Viton® \geq 14 mils gloves) when mixed with oil
- Shoes plus socks
- Protective eyewear
- For other handlers (other than mixers and loaders): Wear a minimum of a NIOSH-approved elastomeric particulate respirator with any R or P filter; OR a NIOSH-approved powered air purifying respirator with HE Filters.
- For applicators: when applying to 80 acres or less in 24-hour period, if not using an enclosed cap, applicators must wear a minimum of a NIOSH-approved particulate filtering facepiece respirator with any R or P filter; OR a NIOSH-approved elastomeric particulate respirator with any R or P filter; OR a NIOSH-approved powered air purifying respirator with HE filters.
- For applicators: when applying to more than 80 acres in 24-hour period, applications must be made using an enclosed cab. Enclosed cabs must have a non-porous barrier that surrounds occupant and prevents contact with pesticides outside of the cab.

Mixers and loaders must wear:

- Long-sleeved shirt and long pants
- Waterproof gloves, except wear chemical-resistant gloves (Barrier Laminate, Nitrile Rubber \geq 14 mils, Neoprene Rubber \geq 14 mils, or Viton® \geq 14 mils gloves) when mixed with oil

- Shoes plus socks
- Chemical-resistant apron
- Face shield
- Wear a minimum of a NIOSH-approved particulate filtering facepiece respirator with any R or P filter; OR a NIOSH-approved elastomeric particulate respirator with any R or P filter; OR a NIOSH approved powered air purifying respirator with HE filters.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENT

Handlers performing mixing and loading activities using paraquat closed systems may not reduce or modify handler PPE requirements as described in 40 CFR 170.607 of the Worker Protection Standard for agricultural pesticides.

When applying to more than 80 acres in a 24-hour period, applications must be made using an enclosed cab. Enclosed cabs must have a nonporous barrier that totally surrounds occupant and prevents contact with pesticides outside of the cab.

USER SAFETY RECOMMENDATIONS

Users Should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to wildlife. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash waters.

NON-TARGET ORGANISM ADVISORY: This product is toxic to plants and may adversely impact the forage and habitat of non-target organisms, including pollinators, in areas adjacent to the treated site. Protect the forage and habitat of non-target organisms by following label directions intended to minimize spray drift.

Paraquat dichloride is toxic to nontarget crops and plants if off-target movement occurs because it desiccates all green plant tissue. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Refer to the local state laws, regulations, guidelines, and spray drift information contained in the Directions for Use section for proper application to avoid off-target movement. Do not apply under conditions involving possible drift to food, forage, or other plantings that might be damaged or the crops thereof rendered unfit for sale, use, or consumption. Do not apply when weather conditions favor drift from treated areas. To avoid drift, do not make aerial application during periods of thermal inversion.

PHYSICAL AND CHEMICAL HAZARDS

This product is mildly corrosive to aluminum and produces hydrogen gas which may form a highly combustible gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. The product is compatible with high density polyethylene and rubber-lined steel containers. Do not use this product in or around strong oxidizing/reducing agents.

CERTIFIED APPLICATOR TRAINING

Applicators must complete an EPA-approved paraquat training listed on the following website: <https://www.epa.gov/pesticide-worker-safety/paraquat-dichloride-training-certified-applicators>. The training must be completed a minimum of every three years.

DIRECTIONS FOR USE

Restricted Use Pesticide. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

Persons who are not certified applicators may transport containers of paraquat that have been opened, subject to the following conditions:

- Closures have been applied by a certified applicator to all openings on the paraquat container, including tank cars, so the closures are secured against loosening and prevent any non-negligible release of paraquat from the openings.
- Each opening on portable containers containing non-negligible amounts of paraquat must have a tamper-evident device applied by a certified applicator, a one-way valve, or both for portable refillable containers used to sell or distribute pesticides.
- Containers of paraquat not permanently attached to a motor vehicle must be secured against shifting, including relative motion between packages, within the vehicle.
- Truck drivers who are not certified applicators must not transfer paraquat or any formulation containing paraquat into or out of the container or tank car.
- Truck drivers who are not certified applicators must have no contact with or access to paraquat or any formulation containing paraquat.
- Any full or emptied portable containers of paraquat must be delivered to a certified applicator, to a secured and locked storage facility controlled by the certified applicator, or to a licensed waste disposal facility.
- A certified applicator must ensure that truck drivers understand the risks associated with paraquat, the consequences of misuse, and the conditions outlined herein.

DO NOT USE THIS PRODUCT IN RESIDENTIAL OR PUBLIC RECREATIONAL SETTINGS (e.g., HOMES, HOME GARDENS, SCHOOLS, RECREATIONAL PARKS, GOLF COURSES, AND / OR PLAYGROUNDS).

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

For all applications except cotton desiccation: Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours.

For cotton desiccation applications: Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 7 days.

If the REI and PHI for a use are different values, users are required to adhere to the longer interval.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls,
- Waterproof gloves, except wear chemical-resistant gloves (Barrier Laminate, Nitrile Rubber \geq 14 mils, Neoprene Rubber \geq 14 mils, or Viton® \geq 14 mils gloves) when mixed with oil
- Shoes plus socks
- Protective eyewear

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

DO NOT enter or allow others to enter the treated area until sprays have dried.

AVOID working in spray mist.

Keep all unprotected persons out of operating areas or vicinity where there may be danger of drift.

Certain states may require more restrictive reentry intervals; consult your State Department of Agriculture for further information.

PRODUCT USE INSTRUCTIONS AND INFORMATION

CLOSED SYSTEMS USE

CONTAINERS WITH CAPACITIES LESS THAN 120 GALLONS: This product must only be removed from the original container with a closed transfer system. Any subsequent transfer of this product must utilize a closed transfer system. Any attempt to circumvent the closed transfer system is prohibited. Any attempt to circumvent the closed transfer system prior to complete removal of the product and rinsing of the product container as described in the Storage and Disposal Section of this label is prohibited. The built-in chemical extraction probe must be rinsed within the pesticide container prior to removal.

CONTAINERS WITH CAPACITIES GREATER THAN OR EQUAL TO 120 GALLONS: A closed transfer system is not required.

APPLICATION METHOD REQUIREMENTS AND RESTRICTIONS

APPLICATION METHODS LISTED ON THIS LABEL ARE THE ONLY PERMISSIBLE APPLICATION METHODS.

If a hand-wand is used to apply LPI 6620 Paraquat 3SL, only a manually pressurized sprayer is permitted.

Do not apply this product through any type of irrigation system.

Individual applicators must not apply this product aerially to more than 350 acres in a 24-hour period, except for cotton and soybean desiccation applications. There is no acreage limit for the treatment of cotton or soybeans for desiccation purposes.

When LPI 6620 Paraquat 3SL is applied at less than 10.0 gallons per acre finished spray volume, a drift control or spray deposition additive **SHOULD** be used. Refer to the additive label for rates of applications, directions for use, limitations, and restrictions.

WEED RESISTANCE MANAGEMENT

This product contains paraquat dichloride and is classified as a Group 22 herbicide, chemical class bipyridylum, with photosystem I electron diverter mode of action.

Herbicide resistance is defined as the inherited ability of a plant to survive and reproduce following exposure to a dose of herbicide normally lethal to the wild type. In a plant, resistance may be naturally occurring or induced by such techniques as genetic engineering or selection of variants produced by tissue culture or mutagenesis. Any weed population may contain or develop plants that are naturally resistant to this product and other Group 22 herbicides. Weed species with acquired resistance to Group 22 herbicides may eventually dominate the weed population if Group 22 herbicides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by this product or other Group 22 herbicides.

Indicators of possible herbicide resistance include: (1) failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds; (2) a spreading patch of non-controlled plants of a particular weed species; (3) surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method such as hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields and planting clean seed. If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy or herbicide with a different mode of action, if available.

To delay herbicide resistance, take one or more of the following steps:

- Rotate the use of LPI 6620 Paraquat 3SL or other Group 22 number) herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.
- Use tank mixtures with herbicides from a different group if such use is permitted; where information on resistance in target weed species is available, use the less resistance-prone partner at a rate that will control the target weed(s) equally as well as the more resistance-prone partner. Consult your local extension service or certified crop advisor if you are unsure as to which active ingredient is currently less prone to resistance.
- Adopt an integrated weed-management program for herbicide use that includes scouting and uses historical information related to herbicide use and crop rotation, and that considers tillage (or other mechanical control methods), cultural (e.g., higher crop seeding rates; precision fertilizer application method and timing to favor the crop and not the weeds), biological (weed-competitive crops or varieties) and other management practices.
- Scout after herbicide application to monitor weed populations for early signs of resistance development. Indicators of possible herbicide resistance include:
 - (1) failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds.
 - (2) A spreading patch of non-controlled plants of a particular weed species.
 - (3) Surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method such as hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields and planting clean seed.
- If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy or herbicide with a different mode of action, if available.
- Contact your local extension specialist or certified crop advisors for additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.

Users should scout before and after application. Users should report lack of performance to Loveland Products, Inc representative.

Contact your local sales representative, extension agent, or certified crop advisors to find out if suspected resistant weeds to this MOA have been found in your region. If resistant biotypes of target weeds have been reported, use the application rates of this product specified for your local conditions. Tank mix products so that there are multiple effective mechanisms of action for each target weed.

INTEGRATED PEST MANAGEMENT

LPI 6620 Paraquat 3SL may be used as part of an Integrated Pest Management (IPM) program that can include biological, cultural, and genetic practices aimed at preventing economic pest damage. IPM principles and practices include field scouting or other detection methods, correct target pest identification, population monitoring, and treating when target pest populations reach locally determined

MANDATORY SPRAY DRIFT MANAGEMENT

Aerial Applications:

- Do not release spray at a height greater than 10 ft above the ground or vegetative canopy, unless a greater application height is necessary for pilot safety.
- Do not apply within 50-75 feet of a residential area. (For applications of more than 0.6 lbs cation/A, a buffer of 75 feet is required. For applications of 0.6 lbs cation/A or lower, a buffer of 50 feet is required.) Residential areas include schools, homes, playgrounds, parks, athletic fields, residential lawns, gardens, and other areas where children may be present.
- Applicators are required to use a medium or coarser droplet size (ASABE S641).
- Do not apply when wind speeds exceed 10 mph at the application site. Applicators must use ½ swath displacement upwind at the downwind edge of the field.
- The boom length must not exceed 65% of the wingspan for airplanes or 75% of the rotor blade diameter for helicopters.
- Do not apply during temperature inversions.

Ground Boom Applications:

- User must only apply with the release height recommended by the manufacturer, but no more than 4 feet above the ground or crop canopy.
- Select nozzle and pressure that deliver medium or coarser droplet size (ASABE S572).
- Do not apply when wind speeds exceed 10 mph at the application site.
- Do not apply during temperature inversions.

action thresholds. Consult your State cooperative extension service, professional consultants or other qualified authorities to determine appropriate action treatment threshold levels for treating specific pest/crop systems in your area.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT.
BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size – Aircraft

- **Adjust Nozzles** - Follow nozzle manufacturers' recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.

Controlling Droplet Size – Ground Boom

- **Volume** - Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- **Pressure** - Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
- **Spray Nozzle** - Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

BOOM HEIGHT – Ground Boom

For ground equipment, the boom should remain level with the crop and have minimal bounce.

SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

Swath Adjustment

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the upwind and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.).

TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

TEMPERATURE INVERSIONS

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND

Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS.
Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

Sensitive Areas

The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

PRODUCT USE INFORMATION

LPI 6620 Paraquat 3SL is a liquid formation containing 3.0 pounds of active ingredient per gallon. It contains a nontoxic odor to help prevent accidental ingestions. It also contains an emetic (an agent which will induce vomiting if the product is swallowed).

APPLICATION

LPI 6620 Paraquat 3SL is a contact herbicide for control or suppression of a broad spectrum of emerged weeds including most small annual broadleaf and grass weeds. It can also be used to suppress perennial weeds by destroying green foliage and as a desiccant/defoliant at harvest.

Complete coverage of target weeds is necessary to get good control because LPI 6620 Paraquat 3SL is a contact-type herbicide. It is also necessary to obtain complete coverage for good crop desiccation and defoliations. Undesirable weed control and undesirable crop desiccation/defoliation will result if improper application technique and/or application to large, stressed, or mown weeds are made. Refer to the following details for specific application instructions.

Thorough coverage of all green foliage is required for efficacious weed control and crop defoliation and desiccation because LPI 6620 Paraquat 3SL requires actively growing green plant tissue to function. Drought-stressed weeds, weeds with little green foliage (i.e., mowed or cut weeds), or mature woody bark of trees and vines are unaffected by application with LPI 6620 Paraquat 3SL.

There is no residual soil activity to affect later-planted crops or later germinating weeds because clay and organic matter rapidly tie up LPI 6620 Paraquat 3SL.

ROTATIONAL CROPS

After the last application of LPI 6620 Paraquat 3SL, all rotational crops may be planted immediately.

RAINFASTNESS

Rain occurring 30 minutes or more after application will have no effect on the activity of LPI 6620 Paraquat 3SL because it is rapidly absorbed by the weed foliage.

USE OF A NONIONIC SURFACTANT OR CROP OIL CONCENTRATE

The following should always be added and be used at the specified rates or there will be a reduction in efficacy of LPI 6620 Paraquat 3SL.

Nonionic Surfactant: Either add a nonionic surfactant cleared for the current use containing 50 to 74% surface-action agent at 0.25% v/v (2.0 pints per 100 gallons), or add nonionic surfactant containing 75% or more surface-active agent at 0.125% v/v (1.0 pint per 100 gallons), of the finished spray volume for ground applications. Add a nonionic surfactant at 0.25% v/v (2.0 pints per 100 gallons) of the finished spray volume for aerial applications.

Crop Oil Concentrate: For ground applications, add a nonphytotoxic crop oil concentrate cleared for the current use that contains 15 to 20% approved emulsifier, with 1.0% v/v, (1.0 gallon per 100 gallons) of the finished spray volume. Add 1.0 pint of crop oil concentrate per acre for aerial applications. **For cotton harvest aid, do not use crop oil concentrate when using LPI 6620 Paraquat 3SL.**

NOZZLE SELECTION

The use of flat-fan nozzles is the most effective application of LPI 6620 Paraquat 3SL. The use of flood nozzles may result in a reduction of weed control due to inadequate coverage because they produce large uneven droplets.

Use only flat fan nozzles when spraying less than 20.0 gallons of spray carrier per acre using the following table.

Nozzle Type and Spray Pressure Setup

	Nozzle Type	
	Flat Fan	Flood
Maximum Size	8	15
Spray Pressure (at nozzle)	30 to 50 psi	30 to 50 psi
Maximum Nozzle Spacing	30"	40"
Direction of Spray Pattern	Down	Down
Maximum Speed	10 mph	10 mph
Spray Overlap (at each edge)	30%	50%

Reduced control will result if nozzles, pressures, or setups differ from the above chart.

SPRAY CARRIER

LPI 6620 Paraquat 3SL may be inactivated by muddy water, or suspension-type fertilizers containing clay. Therefore, always use clean water (free of mud or clay), clear liquid nitrogen, or complete clear liquid fertilizers as the carrier when spraying this product. Never use suspension-type fertilizers containing clay as the spray carrier. Always use the higher specified rate of LPI 6620 Paraquat 3SL and surfactant if using a complete clear liquid fertilizer containing high phosphate levels as the spray carrier.

Note: It is important that when using liquid fertilizers such as 28% N as a spray carrier, that nonionic surfactant is still be used with LPI 6620 Paraquat 3SL. The use of liquid fertilizer carriers are not substitutes for surfactants.

RATES OF LPI 6620 PARAQUAT 3SL

With each use, follow rates listed in the following tables. When weeds are larger or are dense, use the higher specified label rates. For use as a harvest aid, use higher specified rate when crop vegetation is dense. Do not exceed 0.50 pounds active ingredient per acre in a minimum of 30.0 gallons of spray for broadcast applications with manually pressurized hand wand.

SPRAY VOLUME

With each use, follow rates listed in the following tables. Spray volumes should be increased as necessary to obtain complete coverage of the target weed or plant without runoff from the foliage, because **the volumes listed are minimum volumes only**.

TARGET WEEDS SHOULD NOT EXCEED SIX INCHES IN HEIGHT WHEN SPRAYING LESS THAN 20.0 GALLONS OF SPRAY CARRIER PER ACRE.

APPLICATION TIMING

Applications should be made to small, emerged weeds. Larger weeds more than 6 inches in height may be more difficult to control than weeds 1 to 6 inches in height. If possible, when green foliage is removed either from grazing or mowing, allow the weeds to grow 2 to 4 inches, in height. Also, during harvesting forage or grain crops before spraying, weeds present in the field are also cut. Therefore, raise cutter bars as high as possible from the ground to cut stubble and weeds at a greater height, allowing sufficient green foliage to remain for applications.

BURNDOWN OF GRASS COVER CROPS OR VOLUNTEER CEREALS

The best results occur for control of grass cover crops or volunteer cereals when LPI 6620 Paraquat 3SL is applied prior to tillering or after boot stage, especially with a wheat cover crop or volunteer wheat. Complete control may not be achieved with treatments made between tillering and boot stage. Complete control of perennial cover crops should not be expected.

ENVIRONMENTAL CONDITIONS

This product is active over a wide range of environmental conditions such as cool (below 55°F), cloudy or overcast weather. However, these conditions will slow the activity of LPI 6620 Paraquat 3SL.

SPOT SPRAYING

Refer to the following table if only small areas are to be sprayed with labeled applications.

Mixing Instructions for Small Quantities for Spot Spraying	
If the broadcast rate per acre for LPI 6620 Paraquat 3SL is:	Add The Following Amount of LPI 6620 Paraquat 3SL to 1.0 gallon of water:
1.5 pints	0.33 fl. oz.
2.0 pints	0.375 fl. oz.
2.5 pints	0.5 fl. oz.
3.0 pints	0.66 fl. oz.

Add 0.33 to 0.5 fluid ounces of a nonionic surfactant for each gallon of spray at all times. Thoroughly wet the foliage, but not to the point of runoff when spot spraying in this manner.

TANK MIXING: ENHANCED BURNDOWN OF DIFFICULT-TO-CONTROL WEEDS AND FOR RESIDUAL WEED CONTROL

It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Photosynthetic Inhibitor Herbicides

To control difficult weeds, tank mix LPI 6620 Paraquat 3SL with other herbicides. The addition of other photosynthetic inhibitors (PSI) herbicides will slow the activity of LPI 6620 Paraquat 3SL. This allows LPI 6620 Paraquat 3SL to thoroughly distribute throughout a treated leaf, thus achieving better control than if LPI 6620 Paraquat 3SL was applied alone.

LPI 6620 Paraquat 3SL may be applied in tank mixture with the following PSI herbicides:

AAtrex® Herbicide	MAGNUM® Herbicide	Lariat® Herbicide	Lorox® Herbicide
Atrazine Herbicide	Bicep MAGNUM® Herbicide	Lexone® Herbicide	Princep® Herbicide
Bicep Lite II	Canopy® Herbicide	Linex® Herbicide	Sencor® Herbicide

Improved Weed Control with PSI's

The addition of a PSI herbicide will help improve the control of difficult weeds listed below. Make a second application for best results.

Barnyard grass	Knotweed	Pennsylvania smartweed	Volunteer wheat
Broadleaf signalgrass	Kochia	Perennial weeds (suppression only)	
Cheatgrass	Lambsquarters	Prickly lettuce	
Cocklebur	Malva (cheeseweed)	Sedges	
Fall panicum	Marestail	Tansy mustard	
Giant ragweed	Morning glory	Velvetleaf	

Improved Control of Perennial and Annual Broadleaf Weeds

Tank mixing with labeled 2,4-D ester (Low Volatile), 2,4-DB or Banvel® herbicide will help improve control when perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc., or difficult to control annual broadleaf weeds such as giant ragweed or morning glory are present. Reduced grass control may be achieved when tank mixing the amine formulation of 2,4-D with LPI 6620 Paraquat 3SL.

Order of Tank Mixing

Mix LPI 6620 Paraquat 3SL and other listed products as follows:

1. Fill spray tank 1/2 full with clean water or other approved carriers such as clear liquid fertilizer.
2. Begin tank agitation and continue throughout mixing and spraying.
3. Add dry formulations (WP, DF, etc.) to tank.
4. Add liquid formulations (SC, EC, L, etc.) to tank.
5. Add LPI 6620 Paraquat 3SL to tank.
6. Add nonionic surfactant to tank.
7. Fill remainder of spray tank.

It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Jar test prohibition:

Tank mix compatibility testing (a.k.a., jar testing) is prohibited.

For additional tank mix partners not listed on the label, please contact your Loveland Products, Inc. representative.

PRODUCT USE PRECAUTIONS AND RESTRICTIONS

EQUIPMENT

LPI 6620 Paraquat 3SL is corrosive to aluminum. Thoroughly flush all aluminum spray equipment and aluminum aircraft structures that are exposed to spray solution or spray drift with water immediately after use.

The activity of LPI 6620 Paraquat 3SL may be reduced in dry areas where dust stirred up by high winds or equipment tires can coat weed or plant leaves. Therefore, avoid applications in extremely dusty conditions.

PRECAUTIONS

- Unless otherwise indicated, this product will severely injure or kill crop plants emerged at time of application if they come in contact with sprays.
- To enable maximum weed and grass emergence prior to treatment, seedbeds and plantbeds should be formed as far ahead of planting and treatment as possible.
- Avoid disturbing soil when seeding or transplanting.
- Transplanted plants may become damaged when they come in contact with plastic mulch used for preplant weed control and that has been treated with this product. To prevent damage to the crop, sufficient wash-off such as rainfall or sprinkler irrigation prior to planting may be needed.
- This product will be ineffective in controlling or suppressing weeds and grasses that have emerged after application.

RESTRICTIONS

- Do not pasture livestock in treated fields or feed treated foliage in cotton when this product is used as a cotton harvest aid.
- Do not use this product in residential or public recreational settings (e.g., homes, home gardens, schools, recreational parks, golf courses, and/or playgrounds).
- Do not apply to soils lacking clay minerals such as peat, muck, pure sand, artificial planting media for preplant and preemergence (to the crop) uses.
- Individual applicators must not apply this product aurally to more than 350 acres in a 24-hour period, except for cotton and soybean desiccation applications. There is no acreage limit for the treatment of cotton or soybean for desiccation purposes.
- Human flaggers must not be used when making aerial applications.
- Do not apply this product by mechanically pressurized handgun or backpack sprayer. Application by manually pressurized handwand is permitted.

[Note to reviewer: "Continued" may be added to the Crop column if the box is split due to formatting of the final printed label.]

APPLICATION INSTRUCTIONS

Crop	Weeds	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)
ALFALFA (California only) New seedlings		Broadcast	0.7 to 1.3 pt See Table 2.	Ground: 10.0 gal Air: 5.0 gal	70
Directions <ul style="list-style-type: none"> • Applications should be made during late winter or early spring. Precautions <ul style="list-style-type: none"> • Alfalfa foliage present at time of application will be burned. • Replanting may be needed due to the reduction of seedling stands. Restrictions <ul style="list-style-type: none"> • Do not make more than one application per year. • Do not apply to seedling alfalfa grown for seed. • Do not cut or harvest within 70- days after application. • Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) • Maximum Annual Application Rate: Do not exceed 0.5 pints (0.7 lbs) of LPI 6620 Paraquat 3SL/ Acre/year. (0.5 lbs. paraquat cation/ Acre/year.) • Reentry Interval (REI): 48 hours 					
ALFALFA Preplant or Preemergence (No-till or conventional planting)		Broadcast or Banded Over Row	1.7 to 2.7 pt	Ground: 10.0 gal Air: 5.0 gal	NCH – Normal Crop Harvest
Directions <ul style="list-style-type: none"> • Apply prior to emergence of the crop. 					

Crop	Weeds	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)

<p>ALFALFA Dormant season Tank Mix with Velpar® L Herbicide Region A - See table at end of Alfalfa section</p>	<p>Weeds including: chickweed, downy brome, and tansy mustard.</p>	<p>Broadcast</p>	<p>0.7 to 1.3 pt</p>	<p>Ground: 10.0 gal Air: 10.0 gal</p>	<p>42</p>
<p>Directions</p> <ul style="list-style-type: none"> When weeds are less than 4 inches tall, apply at 0.7 pint rate of LPI 6620 Paraquat 3SL. Mix LPI 6620 Paraquat 3SL with 1.0 to 2.0 quarts of Velpar L per acre. Use lower rate of Velpar L on loamy sands or sandy loams. During the dormant season, make one application to established alfalfa stands. <p>Precautions</p>					

Crop	Weeds	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Increased chances of crop injury may occur if stress which may be caused in part by low fertility, disease, insects, winterkill, over cutting, drought or frost. Temporary chlorosis-may occur on alfalfa regrowth. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year. Do not exceed 0.5 lb cation/A for a single application. Do not exceed 1.0 lb cation/A per year. Fall Regrowth: Do not apply if last cutting is greater than 6 inches. Spring Regrowth: Do not apply if last cutting is greater than 2 inches. Do not apply to alfalfa during the first season after seeding. DO NOT USE on gravelly or rocky soils, exposed subsoils, hardpan, sand or poorly drained alkaline soils as crop injury, including mortality, may result. Do not cut or harvest within 42 days after application. Reentry Interval (REI): 48 hours 					
<p>ALFALFA Dormant Season</p> <p>On established plantings: Region B -See table at the end of the Alfalfa section.</p>	<p>Weeds including: London rocket, sowthistle, rescue brome, wild oats, chickweed, ryegrass, bluegrass, cheatgrass, dogfennel, tansy mustard, henbit, downy brome, and other winter annuals; and suppression of perennial weeds</p>	Broadcast	0.7 to 1.3 pt	Ground: 10.0 gal Air: 5.0 gal	60
<p>ALFALFA Dormant Season</p> <p>On fall-seeded newly established stands less than 1-year-old: Region A -See table at the end of the Alfalfa section.</p>	<p>California: Desiccation of weeds including bluegrass, ryegrass, shepherd's</p>	Broadcast	0.7 to 1.3 pt	Ground: 10.0 gal Air: 5.0 gal	60
<p>ALFALFA Dormant Season</p> <p>On fall-seeded newly established stands less than 1-year-old: Region B -See table at the end of the Alfalfa section.</p>	<p>purse, chickweed, tansey mustard, foxtail, sowthistle and groundsel.</p>	Broadcast	0.5 to 0.8 pt	Ground: 10.0 gal Air: 5.0 gal	60
<p>Directions</p> <ul style="list-style-type: none"> Applications should be made before first spring cutting and during late fall or winter months after the last fall cutting. For improved and residual weed control in dormant established (at least 1-year-old) alfalfa, tank mix with metribuzin (Lexone or Sencor). Do not apply tank mix with metribuzin on alfalfa that is less than 1-year-old. <p>Precautions</p> <ul style="list-style-type: none"> Applications to alfalfa that is not dormant, or has broken dormancy, may result in stand and/or yield reductions. Replanting may be necessary. Green alfalfa foliage present at time of application will be burned. If there is a severe weed infestation, total hay yield of first cutting may be reduced in alfalfa fields and the reduction is typically directly proportionate to the loss of weed weight. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than one application per year. Reentry Interval (REI): 48 hours 					

Crop	Weeds	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Do not apply more than 1.3 pt/A (0.5 lb cation/A) of this product in a single application on established plantings in Region B. Do not apply more than 1.3 pt/A (0.5 lb cation/A) of this product in a single application on fall-seeded newly established stands less than 1-year-old in Region A. Do not apply more than 1.3 pt/A (0.5 lb cation/A) of this product in a single application on fall-seeded newly established stands less than 1-year old in Region B. California: Do not apply if spring regrowth after grazing or cutting is more than 2 inches in Orange and Riverside counties, and all counties north of these counties. All other areas within Region B: Do not apply if regrowth after grazing or cutting is more than 2 inches. Do not harvest within 60 days of application. <p>California</p> <ul style="list-style-type: none"> If ryegrass, shepherd's purse, sow thistle, or groundsel are present use higher specified rate. 					
ALFALFA (East of the Rocky Mountains) Between-cuttings treatment in established plantings. (Includes first year alfalfa)		Broadcast	0.7 pt	Ground: 10.0 gal	30
<p>Directions</p> <ul style="list-style-type: none"> Make applications immediately after alfalfa has been removed for hay or silage. Apply as needed up to three times during the growing season in addition to a dormant application. <p>Precautions</p> <ul style="list-style-type: none"> Control of weeds beyond the seedling stage and weed stubble cut off during harvest are less affected by this treatment. A reduction in first year alfalfa stands and yields may occur if alfalfa is allowed to regrow more than 2 inches. Burning of alfalfa foliage will occur at time of application. Weed control may be reduced where moisture is limited such as in arid climates. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 3 applications per year. Reentry Interval (REI): 48 hours Do not exceed 0.25 lb cation/A for a single application. Do not exceed 0.75 lb cation/A per year. Do not treat more than 5 days after cutting. Do not cut or harvest within 30 days of application. Do not make more than 2 applications during the first growing season of first-year alfalfa. 					

Table 2. ALFALFA: New Seedlings - Suppression and control of broad leaf weeds and grasses in new alfalfa seedlings grown for hay (California only).

For control of:	Rate/Acre*	
	For Suppression	For Control
Annual Bluegrass	-	10.7 to 21.3 fl. oz.
Chickweed	-	10.7 to 21.3 fl. oz.
Fiddleneck (6 inches tall or less)	5.4 to 10.7 fl. oz.	21.3 fl. oz.
Red Maids (6 inches tall or less)	-	10.7 to 21.3 fl. oz.
Shepherd's purse	10.7 to 21.3 fl. oz.	-
Spikeweed (4 inches tall or less)	5.4 fl. oz.	10.7 to 16.0 fl. oz.
Volunteer Small Grain (8 inches, tall or less)	5.4 to 10.7 fl. oz.	21.3 fl. oz.

*Use the 5.4 fluid ounce rate only when alfalfa has at least 3 trifoliate leaves; use the 10.7 fluid ounce rate only when alfalfa has 6 trifoliate leaves; or use rates over 10.7 fluid ounce only when there are 9 trifoliate leaves.

Alfalfa - Regions

REGION A
Alaska, California (counties of Del Norte, Siskiyou, Modoc, Shasta, Lassen, Plumas, Sierra and Nevada), Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri,

Montana, Nebraska, Nevada, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, South Dakota, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, Wyoming

REGION B

Alabama, Arizona, Arkansas, California (all other counties not listed in Region A), Florida, Georgia, Hawaii, Louisiana, Mississippi; New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
ALMONDS	Directed Spray	0.8 to 2.7 pts	Ground: 10.0 gal	NCH – Normal crop harvest

Directions

- Avoid allowing spray to contact green stems (except suckers) or foliage.
- When spraying around young trees use a shield or wrap plant.

Precautions

- Retreatment or spot treatments may be necessary for mature woody weeds, perennial weeds, late germinating weeds and green suckers.

Restrictions

- Maximum single application rate: 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre)
- Do not make more than 5 applications in a 12-month period.
- Maximum Annual Application Rate: Do not exceed 13.4 pints (6.9 lbs) of LPI 6620 Paraquat 3SL/ Acre/year. (5.0 lbs. paraquat cation/ Acre/year.)
- Do not graze treated areas and do not feed cover crops grown in treated areas to livestock.
- Do not apply when nuts to be harvested are on the ground.
- Minimum retreatment interval is 7 days.

ARTICHOKE (GLOBE)	Directed Spray	1.7 to 2.7 pts	Ground: 20.0 to 100 gal	48 hours (2 days)
-------------------	----------------	----------------	-------------------------	-------------------

Restrictions

- Maximum single application rate: 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre)
- Do not make more than 3 applications in a 12-month period.
- Maximum annual application rate: Do not exceed 5.4 pints (2.8 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (2.0 lbs. paraquat cation/ Acre/year.)
- Do not harvest within 48 hours of last application.
- Reentry Interval (REI): 48 hours
- Minimum retreatment interval is 7 days.

ASPARAGUS	Preplant or Preemergence Broadcast or Banded Over-Row	1.7 to 2.7 pts	Ground: 10.0 gal Air: 5.0 gal	6 days
-----------	---	----------------	----------------------------------	--------

Directions

- Application should be made prior to emergence of the crop.

Precautions

- Emerged asparagus at time of application will be killed.

Restrictions

- Maximum single application rate: 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre)
- Do not make more than 1 application in a 12-month period.
- Maximum annual application rate: Do not exceed 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (1.0 lbs. paraquat cation/ Acre/year.)
- Minimum retreatment interval is 12 months.
- Reentry Interval (REI): 48 hours

ASPARAGUS Preemergence to established plantings at least 2 years old	Broadcast or Banded Over-Row	1.7 to 2.7 pts	Ground: 10.0 gal	6
---	------------------------------	----------------	------------------	---

Directions

- Application should be made prior to emergence of the crop or after last harvest.

Precautions

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> • Emerged asparagus at time of application will be killed. <p>Restrictions</p> <ul style="list-style-type: none"> • Maximum single application rate: 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL /Acre. CACAO	Directed Spray	1.3 to 2.7 pts	Ground: 50.0 to 200 gal	1 day
<p>Directions</p> <ul style="list-style-type: none"> Apply when weeds are succulent, and growth is from 1 to 6". Use a shield for young trees to prevent sprays from contacting cacao plants, as injury may result. <p>Precautions</p> <ul style="list-style-type: none"> Retreatment or spot treatments may be necessary for mature woody weeds, late-germinating weeds and grasses and for perennials. <p>Restrictions</p> <ul style="list-style-type: none"> Do not spray under windy conditions. Do not graze treated areas or feed treated cover crops to livestock. Do not make more than 5 applications in a 12-month period Maximum single application rate: 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) Maximum annual application rate: Do not exceed 5.4 pints (2.8 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (2.0 lbs. paraquat cation/ Acre/year.) Minimum retreatment interval is 7 days. Reentry Interval (REI): 48 hours 				
CASSAVAS (Manioc) (Puerto Rico only)	Shielded Post Directed Spray	1.3 pts - 2.7 pts	Ground: 50.0 gal	90
<p>Directions</p> <ul style="list-style-type: none"> Application timing: postemergence (directed spray) when weeds are succulent, and growth is 1 to 6 inches. <p>Precautions</p> <ul style="list-style-type: none"> Prevent spray from contacting crop to prevent injury to crop. <p>Restrictions</p> <ul style="list-style-type: none"> Do not spray under windy conditions. Do not graze treated areas or feed treated forage to livestock for at least 90 days after last application. Maximum single application rate: 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) Do not make more than 3 applications in a 12-month period. 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/ Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Maximum annual application rate: Do not exceed 4 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (1.5 lbs. paraquat cation/ Acre/year.) Minimum retreatment interval is 7 days. Reentry Interval (REI): 48 hours <p>For Puerto Rico only use on Taniers and Yams, see directions specific to those crops.</p>				

Product Information for Chemical Fallow

- As the density of stubble, crop residue or weeds increases, use higher spray volumes for better coverage.
- To control volunteer wheat or downy brome, fall-applied treatments generally work best with LPI 6620 Paraquat 3SL. If possible, tank mix with atrazine for maximum burndown and residual control.
- Apply from immediately after harvest, up to emergence of the newly seeded crop as a broadcast or band treatment.
- Before applying LPI 6620 Paraquat 3SL, cut wheat as high as possible to avoid cutting weeds too short, and allow the weeds to grow at least 2 to 3 inches after harvest.
- The addition of dicamba (Banvel) or 2,4-D ester (Low Volatile) may aid in the suppression of emerged perennial broad leaf weeds and large annual broadleaf weeds.
- It is permissible to tank mix with registered residual herbicide combinations other than those listed for extended weed control during the fallow period.
- Weeds and grasses emerging after application and weeds taller than 6 inches will not be controlled.
- Crop plants emerged at the time of application will be killed.
- The minimum total spray per acre allowed is 5.0 gallons for ground and 5.0 gallons for air applications.
- Apply 5.0 to 60.0 gallons spray mix per acre by ground application.
- When applying at less than 10 gallons per acre by ground:
 - Do not apply with floaters or exceed a speed of 10 mph.
 - Apply with flat fan nozzles at 30 to 40 psi.
 - Apply only in a tank mix with atrazine at a minimum of 0.5-pound active ingredient per acre.
 - By air: apply in 5.0 to 10.0 gallons of spray mix per acre.

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
CHEMICAL FALLOW Continuous Wheat (2-to-3-month Re-cropping interval)	Broadcast	Weeds 1 to 3": 1.3 to 1.7 pts Weeds 3 to 6": 1.7 to 2.0 pts Weeds 6": 2.0 to 2.7 pts	Ground: 5.0 gal Air: 5.0 gal	NCH – Normal Crop Harvest
Directions <ul style="list-style-type: none"> Apply at least 45 days before seeding. CHEMICAL FALLOW Wheat-Annual Crop-Wheat-Rotations (Spring applied prior to planting an annual crop ¹)	Broadcast	Weeds 1 to 3": 1.3 to 1.7 pts Weeds 3 to 6": 1.7 to 2.0 pts Weeds 6": 2.0 to 2.7 pts	Ground: 5.0 gal Air: 5.0 gal	NCH – Normal Crop Harvest

¹ Approved Annual Crops are grain sorghum, corn, wheat, or proso millet.

Directions

- For enhanced burndown and residual weed control, tank mix with Atrazine.
- For volunteer wheat or downy brome control in spring, use at least 1.3 pint of LPI 6620 Paraquat 3SL per acre with a Photosynthetic Inhibitor Herbicide.
- Refer to the section "**Product Information for Chemical Fallow**".
- Refer to the Atrazine label for directions pertaining to soil pH and re-cropping intervals.

Restrictions

- Maximum single application rate: 2.7 pints (1.4 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre)
- Do not make more than 3 applications in a 12-month period.
- Maximum Annual Application Rate: Do not exceed 8.0 pints (4.2 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (3.0 lbs. paraquat cation/ Acre/year.)
- Minimum retreatment interval is 7 days.
- Reentry Interval (REI): 48 hours

Crop	Weeds	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
CLOVER AND OTHER LEGUMES (Nongrass Animal Feed (Forage, Feed, Straw, Hay)) Including: bean, velvet (velvetbean); Lespedeza; lupine; Sainfoin; trefoil; vetch; crown vetch and milk vetch. (Crop Group 18, excluding Alfalfa and Kudzu) Dormant Season: On established plantings: Region A - See table at end of Alfalfa section.	For desiccation of weeds, including London rocket, sowthistle, rescue brome, wild oats, chickweed, ryegrass, bluegrass, cheatgrass, dogfennel, tansy mustard, henbit, downy brome, and other winter annuals, and suppression of perennial weeds. California: Use for desiccation of weeds including bluegrass, ryegrass, shepherd's purse, chickweed, tansy mustard, foxtail, sowthistle and groundsel.	Broadcast	1.3 to 2.1 pts	Ground: 10.0 gal Air: 5.0 gal	60
Dormant Season: On established plantings: Region B-See table at end of Alfalfa section.		Broadcast	0.7 to 1.3 pts	Ground: 10.0 gal Air: 5.0 gal	60
On fall-seeded		Broadcast	0.7 to 1.3 pts	Ground: 10.0 gal Air: 5.0 gal	60

Crop	Weeds	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
Newly established stands less than 1-year-old: Region A - See table at end of Alfalfa section.					
On fall-seeded Newly established stands less than 1-year-old: Region B - See table at end of Alfalfa section.		Broadcast	0.5 to 0.8 pts	Ground: 10.0 gal Air: 5.0 gal	60

Directions

- Applications should be made during late fall or winter months after the last cutting and before first spring cutting.
- **In California:** If ryegrass, shepherd's purse, sow thistle or groundsel are present, use higher specified rate.

Precautions

- **CAUTION:** Stand and/or yield reductions may occur when applications are made to clover or other legumes that are not dormant or have broken dormancy. Therefore, it may be necessary to replant. Burning will occur to green clover or other legumes foliage present at the time of application.
- Discoloration and temporary stunting will occur in clover or other legumes foliage present at the time of application.
- If there is severe weed infestation, the total hay yield of first cutting may be reduced in clover or other legumes fields and is usually directly proportionate to the loss of weed weight.

Restrictions

- Do not apply if regrowth after grazing or cutting is more than 2 inches.
- Do not harvest within 60 days of application.
- Maximum single application rate: 2.0 pints (1.0 lb.) of LPI 6620 Paraquat 3SL /Acre. (0.75 lbs. paraquat cation/Acre)
- Do not make more than 1 applications in a 12-month period.
- Maximum Annual Application Rate: Do not exceed 2.0 pints (1.0 lb.) of LPI 6620 Paraquat 3SL/ Acre/year. (0.75 lbs. paraquat cation/ Acre/year.)
- Reentry Interval (REI): 48 hours

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
CORN: In any 12-month period, Do Not Exceed 13.4 pints of LPI 6620 Paraquat 3SL per acre of corn (5.0 lbs. paraquat cation/ Acre)				
CORN; FIELD CORN, POPCORN, SWEET CORN SEED CORN (Used alone)	Preplant or Preemergence Broadcast or Banded Over Row	Weeds 1 to 3": 1.3 to 1.7 pts Weeds 3 to 6": 1.7 to 2.0 pts Weeds 6": 2.0 to 2.7 pts	Ground: 10.0 gal Air: 5.0 gal	NCH – Normal Crop Harvest

Directions

- Includes field, fresh sweet, forage, fodder and popcorn.
- To permit maximum weed and grass emergence, seedbeds should be formed as far ahead of planting and treatment as possible.
- Seeding should be done with a minimum amount of soil disturbance.

Precautions

- Control will not occur when applications are made after weeds and grasses have emerged. However, crop plants emerged at time of application will be killed.

Restrictions- all combined preplant/ preemergence applications of paraquat-containing products

- Maximum single application rate: 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre)
- Do not make more than 3 preplant/preemergence applications in a 12-month period.

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)

(3.0 lbs. paraquat cation/ Acre/12 months). Do not exceed 10 applications in a 12-month period. 				
COTTON	Postemergence Directed Spray (Hooded or shielded)	0.8 to 1.3 pts	10.0 gal	<u>NCH – Normal crop harvest</u>
Directions <ul style="list-style-type: none"> Apply when weeds are actively growing and between 1 to 6 inches in height. If multiple applications are made, allow 14 days between applications. Use higher specified rate on dense populations and/or larger or hard to control weeds. Weeds 6" or taller may not be controlled. AVOID CONTACT WITH CROP. Intentional or accidental contact, including, drift, of LPI 6620 Paraquat 3SL with the crop may result in severe damage or loss of the crop. Apply by directing spray between the rows using hooded or shielded sprayers to prevent contact with the crop plant. LPI 6620 Paraquat 3SL may be tank mixed with other postemergence directed herbicides. Unless otherwise directed on this label, refer to tank mix product labels for rates, directions, limitations and precautions. 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<p>Precautions</p> <ul style="list-style-type: none"> Equipment should be in good operating condition. Avoid leakage or dripping onto crop. Variation in equipment design may affect the level of weed control. Keep hoods or shields adjusted to ensure adequate contact with weeds while shielding the crop from the herbicide. To minimize drift, do not use nozzles or nozzle configurations or adjuvants which produce fine spray droplets (mist). <p>Restrictions- postemergence applications of paraquat-containing products</p> <ul style="list-style-type: none"> Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Reentry Interval (REI): 48 hours Retreatment application interval: Minimum of 14 days between treatments. Do not make more than 3 postemergence applications in a 12-month period. Maximum Annual Application Rate: Do not exceed 4 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (1.5 lbs. paraquat cation/ Acre/12 months.) <p>Restrictions- Combined uses of all paraquat-containing products – any application method</p> <ul style="list-style-type: none"> Do not exceed 10 applications in a 12-month period. Do not exceed 8.0 pints (4.2 lbs.) of LPI 6620 Paraquat 3SL/ Acre/12 months. (3.0 lbs. paraquat cation/ Acre/12 months). 				

COTTON, Harvest Aid Use and Post-Harvest Application

Precautions

- May be tank mixed with other cotton harvest aid materials known to be effective by a local expert. Unless otherwise instructed in this label, always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions. LPI 6620 Paraquat 3SL can be applied in a tank mix with methyl parathion and/or Karate® insecticide. Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.
- Nodes above cracked bolls (NACB) timing is for guidance and is not intended to restrict the local expert in their use of the product.

Restriction

- Do not pasture livestock in treated fields or feed treated foliage.
- Preharvest Interval: Western Cotton PHI is 7 days. All other cotton PHI is 3 days.
- Retreatment application interval: Minimum of 7 days between treatments.
- Reentry Interval (REI): 7 days
- Harvest Aid use in cotton:
 - Repeat application if necessary.
 - Do not make more than 4 harvest aid applications (of any paraquat-containing product) per year.
 - Do not exceed 0.5 lbs. of paraquat cation/ Acre/year; (1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre/year.
- All combined use in cotton:
 - Do not make more than 10 total applications (of any paraquat-containing product) per year.
 - Do not exceed 3.0 lbs. paraquat cation/ Acre/year; (8.0 pints (4.2 lbs.) of LPI 6620 Paraquat 3SL /Acre/year

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
COTTON, SOUTHERN Harvest aid for boll opening and defoliation (Tank mix with phosphate and chlorate defoliant)	Harvest Aid Broadcast	5.4 Fl. oz. + 1 pt phosphate or 1.0 gal chlorate	Ground: 10.0 gal Air: 5.0 gal	Use the longest PHI given for any product in tank-mix. (LPI 6620 Paraquat 3SL PHI = 3 days)
<p>Directions</p> <ul style="list-style-type: none"> Apply when 80% or more of the bolls are open and the remaining bolls to be harvested are mature. <p>Precautions</p> <ul style="list-style-type: none"> Development of immature bolls will be inhibited. <p>Restrictions- harvest-aid applications of paraquat-containing products</p> <ul style="list-style-type: none"> Apply at least 3 days before harvest 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<p>Directions</p> <ul style="list-style-type: none"> Apply 2,4-D ester (Low Volatile) at 0.35 to 0.475 pounds active ingredient per acre at least 7 days prior to planting. Apply 2,4-D ester (Low Volatile) at 0.475 to 0.95 pounds active ingredient per acre at least 30 days prior to planting. May be tank mixed with residual herbicides listed above. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 3 applications per year. Do not apply 2,4-D ester (Low Volatile) prior to planting soybeans if you are not able to accept the results of soybean injury including possible loss of stand and yield. Do not use amine formulation. Maximum single application rate: 2.7 pints (1.3lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) Maximum Annual Application Rate: Do not exceed a total of 4.0 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (1.5 lbs. paraquat cation/Acre/year) Retreatment application interval: Minimum of 7 days between treatments Reentry Interval (REI): 48 hours <p>Restrictions- Combined uses of all paraquat-containing products – any application methods</p> <ul style="list-style-type: none"> Do not exceed 10.8 pints (5.5 lbs.) of LPI 6620 Paraquat 3SL/ Acre/12 months. (2.9 lbs. paraquat cation/ Acre/12 months). Do not make more than 9 total applications (of any paraquat-containing product) per year. 				
SOYBEANS	Postemergence Directed Spray (Includes Hooded or Shielded)	3.0 to 5.3 fl. oz.	Ground: 10 gal	46 days
<p>Directions</p> <ul style="list-style-type: none"> Apply when weeds are actively growing. Use the lower rate of LPI 6620 Paraquat 3SL for control of seedling johnsongrass, crabgrass, goosegrass, Brachiaria, Texas millet and pigweed less than 2 inches tall. For control of 2-to-4-inch red rice, Brachiaria, barnyard grass, crabgrass, goosegrass, seedling johnsongrass, giant foxtail, and fall panicum, use 5.3 fl. oz. of LPI 6620 Paraquat 3SL. Use 5.3 fluid ounces of LPI 6620 Paraquat 3SL for control of 2-to-3-inch sicklepod, purslane, pigweed, cut leaf ground cherry, and common ragweed. Apply LPI 6620 Paraquat 3SL at 5.3 fluid ounce per acre plus 0.2 pounds active ingredient per acre of a 2,4-D formulation for control of 2-to-4-inch grasses in mixture with common cocklebur, morning-glory, and red rice. If necessary, make a second and final application 7 to 14 days later. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year. Do not graze or harvest for forage or hay. Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Maximum Annual Application Rate: Do not exceed a total of 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (1.0 lbs. paraquat cation/Acre/year) Retreatment application interval: Minimum of 14 days between treatments Reentry Interval (REI): 48 hours <p>Restrictions- Combined uses of all paraquat-containing products – any application methods</p> <ul style="list-style-type: none"> Do not exceed 10.8 pints (5.5 lbs.) of LPI 6620 Paraquat 3SL/ Acre/12 months. (2.9 lbs. paraquat cation/ Acre/12 months). Do not make more than 9 total applications (of any paraquat-containing product) per year. <p>DIRECTIONS FOR HOODED OR SHIELDED SPRAYERS</p> <ul style="list-style-type: none"> Apply by directing spray between the rows and using hooded or shielded sprayers to prevent spray contact with crop plants. 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Use higher specified rate on larger (less than 6 inches) or hard to control weeds. Weeds 6 inches or taller may not be controlled. <p>Precautions</p> <ul style="list-style-type: none"> Severe damage and/or complete kill can occur if spray intentionally or accidentally (including drift of fine droplets) contacts the plants. <p>DIRECTIONS FOR USE DIRECTED SPRAY WITHOUT HOODED OR SHIELDED SPRAYERS</p> <p>Directions</p> <ul style="list-style-type: none"> Use precision directed spray application equipment adjusted so that no more than the lower 3 inches of the soybean plant is contacted by the application spray. <p>Precautions</p> <ul style="list-style-type: none"> Some crop injury will occur. The degree of injury is dependent upon the precision of application and spraying conditions. <p>Restrictions</p> <ul style="list-style-type: none"> Do not treat on soybeans that are less than 8 inches tall. Do not exceed 30 psi nozzle pressure or spray, under conditions which may cause excessive drift. 				
SOYBEANS	Harvest Aid	5.4 to 10.7 fl. oz.	Ground: 20.0 gal Air: 5.0 gal	Grain only – 15 days
<p>Directions</p> <ul style="list-style-type: none"> Always use the higher specified rate when treating cocklebur. Indeterminate varieties: Applications should be made when at least 65% of the seed pods have reached a mature brown color or when seed moisture is 30% or less. Determinant varieties: Apply when plants are mature, i.e., beans are fully developed, 1/2 of leaves have dropped, and remaining leaves are yellowing. <p>Precautions</p> <ul style="list-style-type: none"> Mature cocklebur, especially drought-stressed plants are tolerant to LPI 6620 Paraquat 3SL and desiccation will not be complete. Injury will occur on immature soybeans. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 1 applications per year. Do not apply within 15 days of harvest. Do not graze or harvest for forage or hay. Maximum single application rate: 10.7 Fl. oz. (0.36 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.25 lbs. paraquat cation/Acre) Maximum Annual Application Rate: Do not exceed a total of 10.7 Fl. oz. (0.36 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (0.25 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours <p>Restrictions- Combined uses of all paraquat-containing products – any application methods</p> <ul style="list-style-type: none"> Do not exceed 10.8 pints (5.5 lbs.) of LPI 6620 Paraquat 3SL/ Acre/12 months. (2.9 lbs. paraquat cation/ Acre/12 months). Do not make more than 9 total applications (of any paraquat-containing product) per year. 				
STRAWBERRIES	Postemergence Directed Spray	1.3 pt	Ground: 20.0 gal	21 days
<p>Directions</p> <ul style="list-style-type: none"> Direct spray between the rows, using shields to prevent spray contact with crop plants. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 3 applications per year. Do not allow spray to contact strawberry plants as injury or excessive residues may result. Do not graze or harvest for forage or hay in treated area. Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Maximum Annual Application Rate: Do not exceed a total of 4 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL per/Acre/ year. (1.5 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
SUGAR BEETS	Preplant or Preemergence	1.3 to 2.7 pts	Ground: 10.0 gal Air: 5.0 gal	NCH- Normal Crop Harvest
<p>Directions</p> <ul style="list-style-type: none"> For heavier weed infestations, use the higher specified label rate. Seeding or transplanting should be done with a minimum amount of soil disturbance. Can be used in fallow bed/stale seedbed for weed control. Seedbeds or plant-beds should be formed as far ahead of treatment as possible to permit maximum weed emergence. <p>Precautions</p> <ul style="list-style-type: none"> Crop plants emerged at time of application will be killed. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 3 applications per year. Maximum single application rate: 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 8.0 pints (4.2 lbs.) of LPI 6620 Paraquat 3SL per/Acre/ year. (3.0 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
SUGARCANE- General Directions and Restrictions	Postemergence Directed Spray (Includes Hooded or Shielded)	See Location Specific LPI 6620 Paraquat 3SL Rate/Acre	See Minimum Total Spray/Acre for each location	30 days
<p>Directions</p> <ul style="list-style-type: none"> Apply as a hooded, shielded or directed spray to avoid contact with cane foliage to prevent leaf burn and yield reduction. If necessary, a second and final application can be made when new weed growth is 2 to 6 inches high. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year, except applications made by air in Florida and Texas in which the maximum number of applications allowed is 1 per year. Do not graze treated areas or feed treated forage to livestock. 				
SUGARCANE Florida	Postemergence Directed Spray (Includes Hooded or Shielded)	1.3 pt	Ground: 50.0 gal	NCH – Normal Crop Harvest
<p>Directions</p> <ul style="list-style-type: none"> Optimum results can be obtained by applying in early spring (March to April) when weeds are small. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year. Do not apply after June 1 as cane growth may be stunted and yields reduced. Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL per/Acre/ year. (1.0 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
SUGARCANE Hawaii	Postemergence Directed Spray (Includes Hooded or Shielded)	1.3 pt	Ground: 20.0 gal	NCH- Normal Crop Harvest
<p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year. 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Do not apply after cane rows have closed in. Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (1.0 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
SUGARCANE Louisiana	Postemergence Directed Spray (Includes Hooded or Shielded)	0.7 to 2.0 pts	Ground: 20.0 gal	30 days
<p>Directions</p> <ul style="list-style-type: none"> For tiller control, apply when tillers are less than 18 inches high. For heavier weed infestations or tiller growth use the higher specified rate. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year. Maximum single application rate: 2.0 pints (1.0 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.75 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 4.0 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (1.5 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
SUGARCANE Florida & Texas	Harvest Aid	0.4 to 0.7 pts	Air: 5.0 gal	3 days
<p>Directions</p> <ul style="list-style-type: none"> Under cool, cloudy weather conditions use higher specified rate. Apply 3 to 14 days before burning and harvest. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 1 application per year. Maximum single application rate: 0.7 pints (0.36 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.25 lbs. paraquat cation/Acre) Maximum Annual Application Rate: Do not exceed a total of 0.7 pints (0.36 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (0.25 lbs. paraquat cation/Acre/year) 				
SUNFLOWER	Preplant Preemergence Broadcast Banded Over Row	1.7 to 2.7 pts	Ground: 10.0 gals Air: 5.0 gal	7 days
<p>Directions</p> <ul style="list-style-type: none"> Apply before, during, or after planting but before crop emergence. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 3 applications per year. Maximum single application rate: 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 8.0 pints (4.2 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (3.0 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
SUNFLOWER	Preharvest Desiccation Broadcast	0.8 to 1.3 pts	Ground: 10.0 gals Air: 5.0 gal	7 days
<p>Directions</p> <ul style="list-style-type: none"> Apply when sunflower seeds reach physiological maturity (when seed moisture is 35% or lower). For many varieties, this is equivalent to the time when the back of the heads are yellow and the bracts are turning brown. When crop stands or weed infestations are heavy, use the higher label rate. <p>Restrictions</p>				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Do not make more than 2 applications per year. Do not graze treated areas or feed treated forage to livestock. Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (1.0 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
TANIERS (Puerto Rico ONLY)	Shielded Post Directed Spray	1.3 pts	Ground: 50.0 gal	90
<p>Directions</p> <ul style="list-style-type: none"> Application timing: postemergence (directed spray) when weeds are succulent, and growth is 1 to 6 inches. <p>Precautions</p> <ul style="list-style-type: none"> Prevent spray from contacting crop to prevent injury to crop. <p>Restrictions</p> <ul style="list-style-type: none"> Do not spray under windy conditions. Do not graze treated areas or feed treated forage to livestock for at least 90 days after last application. Maximum single application rate: 1.3 pints (0.7 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Do not make more than 3 applications in a 12-month period. Maximum annual application rate: Do not exceed 4.0 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (1.5 lbs. paraquat cation/ Acre/year.) Minimum retreatment interval is 7 days. Reentry Interval (REI): 48 hours <p>For Puerto Rico only use on Cassavas and Yams, see directions specific to those crops.</p>				
TARO, DRYLAND (Hawaii Only)	Postemergence Directed Spray	1.3 to 2.1 pts	Ground: 10.0 gal	180 days
<p>Directions</p> <ul style="list-style-type: none"> Make the first application when weed growth is 1 to 4 inches high. Weeds emerging after the application will not be controlled. A single re-treatment may be made; however, do not harvest dryland taro within 6 months of the last application. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 2 applications per year. Do not allow spray to contact the taro plants as injury may result. Maximum single application rate: 2.0 pints (1.0 lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.75 lbs. paraquat cation/Acre) Retreatment application interval: Minimum of 7 days between treatment. Maximum Annual Application Rate: Do not exceed a total of 4.0 pints (2.1 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (1.5 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
TREE PLANTATION ESTABLISHMENT Deciduous/broadleaf/hardwood and Conifers/evergreen/softwood	Preplant Broadcast	1.3 to 2.7 pts	Ground: 20.0 gal	Not Applicable
<p>Directions</p> <ul style="list-style-type: none"> To allow maxim emergence of weeds prepare ground early. Apply prior to planting. Plant with minimal soil disturbance. For heavier weed infestations, use the higher application rate. For improved burndown or residual control, tank mix LPI 6620 Paraquat 3SL with other herbicides labeled for this use. <p>Restrictions</p> <ul style="list-style-type: none"> Do not make more than 3 applications per year. Do not apply in less than 20.0 gallons per acre as weed control will be reduced. Retreatment application interval: Minimum of 7 days between treatment Maximum single application rate: 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
<ul style="list-style-type: none"> Maximum Annual Application Rate: Do not exceed a total of 8.0 pints (4.1 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (3.0 lbs. paraquat cation/Acre/year) Reentry Interval (REI): 48 hours 				
TREES AND VINES Orchards, Vineyards, Windbreak Shade & Ornamental Trees: Acerola, Apples, Apricots, Avocados, Bananas, Beechnut, Brazil nut, Butternut, Calamondin, Cashew, Cherries, Chestnut, Chinquapin, Citrus, Citron, Coffee, Figs, Filberts, Grapefruit, Grapes, Hickory nut, Kiwi fruit, Kumquat, Lemon, Lime, Macadamia nuts, Mandarin, Nectarines, Olives, Orange (sour & sweet), Papayas, Peaches, Pears, Pistachios, Plums, Prunes, Pummelo, Satsuma mandarin, Walnuts, and other shade and ornamental trees including arborvitae, ash, elm, fir, oak, pine, etc.	Directed Spray	1.7 to 2.7 pts	Ground: 10.0 gal	Acerola: 28 Apricots: 28 Cherries: 28 Citrus: 1 day Coffee: 14 days Figs: 13 Kiwi Fruit: 14 Nectarines: 28 Olives: 13 Peaches: 14 Pistachios: 7 Plums: 28 Prunes: 28 Other listed crops, if PHI applicable, use NCH- (Apple, Avocado, Banana, Grapes, Papaya, Pear, Tree Nuts (excluding Pistachio))
<p>Directions</p> <ul style="list-style-type: none"> Use the shield or wrap plant when spraying around young trees or vines. For mature woody weeds, perennial weeds, late germinating weeds and green suckers, retreatment or spot treatment may be necessary. <p>Restrictions – General</p> <ul style="list-style-type: none"> Do not allow spray to contact green stems (except suckers), fruit or foliage. Do not graze treated areas. Do not feed covered crops grown in treated areas to livestock. Do not apply when figs, nuts, or olives to be harvested are on the ground. Retreatment application interval: Minimum of 7 days between treatment. Reentry Interval (REI): 48 hours <p>Restrictions- Specific to Acerola; Apple; Avocado; Banana; Citrus; Coffee; Fig; Grapes; Papaya; Pear; Pistachio* and other Tree Nuts; Shade and ornamental trees including, arborvitae, ash, elm, fir, oak, pine, etc.</p> <ul style="list-style-type: none"> Maximum single application rate: 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL /Acre. <p>Directions</p> <ul style="list-style-type: none"> Apply during dormant season before buds in crown begin to grow. <p>Restrictions</p> <ul style="list-style-type: none"> Do not exceed 2 applications per year. Retreatment application interval: Minimum of 7 days between treatment. Maximum single application rate: 2.7 pints (1.38 lbs.) of LPI 6620 Paraquat 3SL /Acre. (1.0 lbs. paraquat cation/Acre) Maximum Annual Application Rate: Do not exceed a total of 5.4 pints (2.8 lbs.) of LPI 6620 Paraquat 3SL per/Acre/year. (2.0 lbs. paraquat cation/Acre/year) 				
<p>YAMS (Puerto Rico Only)</p>	<p>Shielded Post Directed Spray</p>	<p>1.3 pts</p>	<p>Ground: 50.0 gal</p>	<p>90</p>
<p>Directions</p> <ul style="list-style-type: none"> Application timing: postemergence (directed spray) when weeds are succulent, and growth is 1 to 6 inches. 				

Crop	Use Pattern	LPI 6620 Paraquat 3SL Rate/Acre	Minimum Total Spray/Acre	Grazing or Preharvest Interval (Days)
Precautions <ul style="list-style-type: none"> Prevent spray from contacting crop to prevent injury to crop. Restrictions <ul style="list-style-type: none"> Do not spray under windy conditions. Do not graze treated areas or feed treated forage to livestock for at least 90 days after last application. Maximum single application rate: 1.3 pints (0.7lbs.) of LPI 6620 Paraquat 3SL /Acre. (0.5 lbs. paraquat cation/Acre) Do not make more than 2 applications in a 12-month period. Maximum annual application rate: Do not exceed 2.7 pints (1.3 lbs.) of LPI 6620 Paraquat 3SL/ Acre/year. (1.0 lbs. paraquat cation/ Acre/year.) Minimum retreatment interval is 7 days. Reentry Interval (REI): 48 hours For Puerto Rico only use on Taniers and Cassava, see directions specific to those crops.				

RESIN SOAKING

Pines including Loblolly, Shortleaf, Longleaf, Slash, Virginia, Pond, Pitch, and Spruce Pines.

Tree Selection -Trees should be selected from stands on sites not subject to stress from periods of extreme drought stress because the desiccating effect of LPI 6620 Paraquat 3SL is accentuated during drought, causing a reduction in the amount of oleoresin deposited in the xylem. Vigorous, non-stagnated natural or planted stands should be selected. Plan LPI 6620 Paraquat 3SL treatments in stagnated or commercial timber stands, no sooner than three years after commercial thinning.

Application Directions: To bring the treatment into contact with sapwood (or xylem), apply water-diluted LPI 6620 Paraquat 3SL to an appropriate wound in the tree trunk.

Bark Streaks or Cuts: Use a standard or rotary bark hack or a chainsaw shipping tool (used in naval stores work) to remove a single 1-inch-wide streak of bark about 1 to 2 feet from ground level. Do not exceed 1/3 of the circumference of the tree. Serious girdling of the trunk and premature death of the tree can result if multiple streaks or cuts are made. Apply a coarse spray (about 1.7 to 5.0 ml) LPI 6620 Paraquat 3SL solution (1 to 5% cation, wt./wt. basis) to runoff to the exposed xylem, using a low-pressure sprayer. The amount of spray required per cut depends on tree circumference and the length of cut or streak. For example, for a 9-inch diameter tree, using 3.0 ml of 2 or 4% LPI 6620 Paraquat 3SL solution will cover the 1-inch wide streak and will result in application of 60.0 or 120 mg per streak.

Time of Treatment: Less severe pine beetle infestation and longer tree life usually result during cool season treatments under non-drought seasons. However, resin soaking can occur from treatments made any time of the year.

Interval between Treatment and Tree Harvest: There should be at least a 6-month interval between application of LPI 6620 Paraquat 3SL and tree harvest. However, it is preferable the interval is from 12 to 24 months, even though intervals of over 6 months may not be possible under conditions of drought or serious pine beetle attacks possibly making early harvest necessary.

With this treatment, there is a potential for promoting beetle attack or causing premature death of the tree. At high dosage rates, desiccation of the xylem tissue, rather than the desired resin soaking, may occur.

NOTE: This type of treatment may reduce stem growth during between treatment and tree harvest.

Dilution Table for LPI 6620 Paraquat 3SL (3.0 lbs. cation per gallon)	
Concentration of Cation on Desired (wt./wt. basis)	Add the Following No. Gal. of Water to 2/3 Gallon of LPI 6620 Paraquat 3SL
0.2%	118.8
0.5%	46.8
1.0%	22.9
2.0%	10.9
3.0%	6.9
4.0%	4.9
5.0%	3.7

STORAGE AND DISPOSAL

PROHIBITIONS: Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

PESTICIDE STORAGE: Store in original container and place in a locked storage area. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. Store at temperatures above 32°F.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

CONTAINER HANDLING:

NONREFILLABLE CONTAINER:

Rigid, Nonrefillable Container Small Enough to Shake (Capacity of 5 Gallons or Less): Nonrefillable Container. Do not reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Pump or empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Shake for 10 seconds. Pump rinsate into application equipment or a mix tank. Repeat this procedure two more times. Prepare container for recycling. Then offer container for recycling or reconditioning if available, or puncture and dispose and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Pressure rinse as follows: Pump or empty the remaining contents into application equipment or a mix tank. While container is in the closed transfer system rinse at 40 PSI for at least 30 seconds. Once container is rinsed, [prepare container for recycling, then] offer for recycling if available or puncture and dispose and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Rigid, Nonrefillable Container Not Large Enough to Shake (Capacity of Greater than 5 Gallons, but Less than 120 Gallons): Nonrefillable Container. Do not reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Pump or empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Remove transfer hoses. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Once container is rinsed, [prepare container for recycling, then] offer for recycling if available, or puncture and dispose and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Pressure rinse as follows: Pump or empty the remaining contents into application equipment or a mix tank. While container is in the closed transfer system rinse at 40 PSI for at least 30 seconds. Once container is rinsed, [prepare container for recycling, then] offer for recycling if available or puncture and dispose and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Nonrefillable Container Greater than or Equal to 120 Gallons: Nonrefillable Container. Do not reuse or refill this container. Triple rinse promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer container for recycling or reconditioning if available, or puncture and dispose and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

[The built-in chemical extraction probe must be rinsed within the pesticide container prior to removal.]

CONTAINER IS NOT SAFE FOR FOOD, FEED, OR DRINKING WATER.

For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC – 1-800-424-9300.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

BEFORE BUYING OR USING THIS PRODUCT, read the entire Directions for Use and the following Conditions of Sale and Limitation of Warranty and Liability. By buying or using this product the buyer or user accepts the following Conditions of Sale and Limitation of Warranty and Liability, which no employee or agent of LOVELAND PRODUCTS, INC. or the seller is authorized to vary in any way.

Follow the Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of THIS PRODUCT. Crop or other plant injury, ineffectiveness, or other unintended consequences may result from such risks as weather or crop conditions, mixture with other chemicals not specifically identified in this product's label, or use of this product contrary to the label instructions, all of which are beyond the control of LOVELAND PRODUCTS, INC. and the seller. The buyer or user of this product assumes all such inherent risks.

Subject to the foregoing inherent risks, LOVELAND PRODUCTS, INC. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use when the product is used in strict accordance with such Directions for Use under normal conditions of use. EXCEPT AS WARRANTED IN THIS LABEL AND TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS PRODUCT IS SOLD "AS IS," AND LOVELAND PRODUCTS, INC. MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR ELIGIBILITY OF THIS PRODUCT FOR ANY PARTICULAR TRADE USAGE.

IN THE UNLIKELY EVENT THAT BUYER OR USER BELIEVES THAT LOVELAND PRODUCTS, INC. HAS BREACHED A WARRANTY CONTAINED IN THIS LABEL AND TO THE EXTENT REQUIRED BY APPLICABLE LAW, BUYER OR USER MUST SEND WRITTEN NOTICE OF ITS CLAIM TO THE FOLLOWING ADDRESS: LOVELAND PRODUCTS, INC., ATTENTION: LAW DEPARTMENT, P.O. BOX 1286, GREELEY, CO 80632-1286.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE BUYER'S OR USER'S EXCLUSIVE REMEDY FOR ANY INJURY, LOSS, OR DAMAGE RESULTING FROM THE HANDLING OR USE OF THIS PRODUCT, INCLUDING BUT NOT LIMITED TO CLAIMS OF BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, STRICT LIABILITY, OR OTHER TORTS, SHALL BE LIMITED TO ONE OF THE FOLLOWING, AT THE ELECTION OF LOVELAND PRODUCTS, INC. OR THE SELLER: DIRECT DAMAGES NOT EXCEEDING THE PURCHASE PRICE OF THE PRODUCT OR REPLACEMENT OF THE PRODUCT. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, LOVELAND PRODUCTS, INC. AND THE SELLER SHALL NOT BE LIABLE TO THE BUYER OR USER OF THIS PRODUCT FOR ANY CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES, OR DAMAGES IN THE NATURE OF A PENALTY.

COUNTER CARD		
<p>LPI 6620 Paraquat 3SL contains the active ingredient paraquat dichloride (paraquat). People have died from accidentally drinking paraquat containing products that had been transferred into a beverage container, such as a water bottle or other drink bottle. It is also highly corrosive and can cause severe skin and eye damage including 3rd degree burns. Inhalation exposure may result in serious respiratory effects. FATAL if swallowed or inhaled.</p>		<p>LPI 6620 Paraquat 3SL contiene el ingrediente activo dicloruro de paraquat (paraquat). Hay personas que han muerto por beber accidentalmente productos que contienen paraquat que se habían transferido a un recipiente de bebidas, como una botella de agua u otra botella de bebida. También es altamente corrosivo y puede causar daños graves en la piel y los ojos, incluyendo quemaduras de tercer grado. La exposición por inhalación puede provocar efectos respiratorios graves. FATAL si se ingiere o inhala.</p>
