DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling

Apply Dursban 2.5% Granular Insecticide uniformly to home lawns and other ornamental and recreational turf areas using any hand or power operated gravity or rotary type spreader designed for application of granular materials. Treat when insects first appear using at the rate of 40 lbs. per acre. To help obtain uniform distribution apply one-half of the required amount of product in one direction, then apply the balance at a right angle immediately after application, sprinkle the turf with 1,300 gallons of water per acre so as to wash the granules into the zone of insect infestation. Consult the following table to determine the amount of Dursban 2.5% Granular Insecticide and water needed for smaller sized areas. Re-treat as necessary.

TO CONTROL CERTAIN WHITE GRUBS (larvae of Furopean Chafer and Japanese beetle) use two to four times the amounts of Dursban 2.5% Granular shown in the following table (i.e. 2-4 lbs. per 1,000 sq. ft.). After application apply enough water to thoroughly wash the insecticide into the turf. For best results treat when grubs are young and actively feeding near the soil surface, usually during late July and August. Consult your local Agricultural Extension Service specialist for proper time to treat in your area.
