CONTAINER HANDLING AND STORAGE

Keep plugs up to prevent leakage.

Keep container out of sun and away from heat.

Relieve internal pressures when received and at least weekly thereafter by slowly loosening plug. Retighten immediately.

Never use pressure to empty. Container is not a pressure vessel.

Replace plugs after each withdrawal.

In case of spillage, flush with plenty of water.

NOTE: As a guide, 10 ounces in 10,000 gallons of relatively clean water will yield approximately 1.0 part per million available chlorine as measured with a suitable test kit.
