

THE WATER GUARD UNIT

MODEL 333 VGC

The Water Guard Unit Model 333 VGC is on guard 24 hours a day. It produces delicious, springlike drinking water at your fingertip.

Tastes and odors are removed by this system which represents the latest in technological advances and continuing research.

Laboratory tests were conducted by independent laboratories and universities such as the University of Miami School of Medicine. Copies of these tests are available upon request.

ADDITION FEATURES OF WATER GUARD WATER TREATMENT UNIT MODEL 333 VGC

- Requires no electricity
- Does not add salt to water
- No moving parts
- Requires no chemicals to be added.
- Fits under sink at rear corner
- Separate faucet
- Easy installation.
- No rust or deterioration.
- Clearer, cleaner water.
- Extra deep filtering bed with more filter media provides longer flow path to filter the water better and longer.
- Uses silver compounds to inhibit growth of bacteria in the filter's media.
- Healthful minerals are not removed
- Continuous supply -- for the 2500 gallon maximum life of the unit.

The unit is capable of treating about 7 gallons of water daily for drinking and cooking for about a year. When the flow rate diminishes substantially (less than a quart per minute) or the gallonage limitation has been reached, the unit must be replaced.

This product has been thoroughly tested for 2500 gallon lifetime to insure that the silver concentration in drinking water will never exceed the maximum level of 50 parts per billion allowed for potable water.

WHAT DOES IT DO?

The Water Guard Unit Model 333 VGC makes water taste better because it removes unwanted tastes and odors. At the same time Water Guard Unit Model 333 VGC inhibits the growth of bacteria in the filter media.

You will be pleased with the way it helps the taste of anything prepared with water — vegetables, salads, coffee, tea and other drinks.

WHERE IS IT USED?

The Water Guard Unit Model 333 VGC is compact enough to fit under kitchen or bathroom sinks and does not interfere with usable storage space. It is also used for ice makers, water fountains and coffee makers. The Water Guard Unit Model 333 VGC is designed to improve water already treated by your municipal system. If you have a well, consult your representative or the factory for specific recommendations.

ARE PRE-FILTERS NECESSARY?

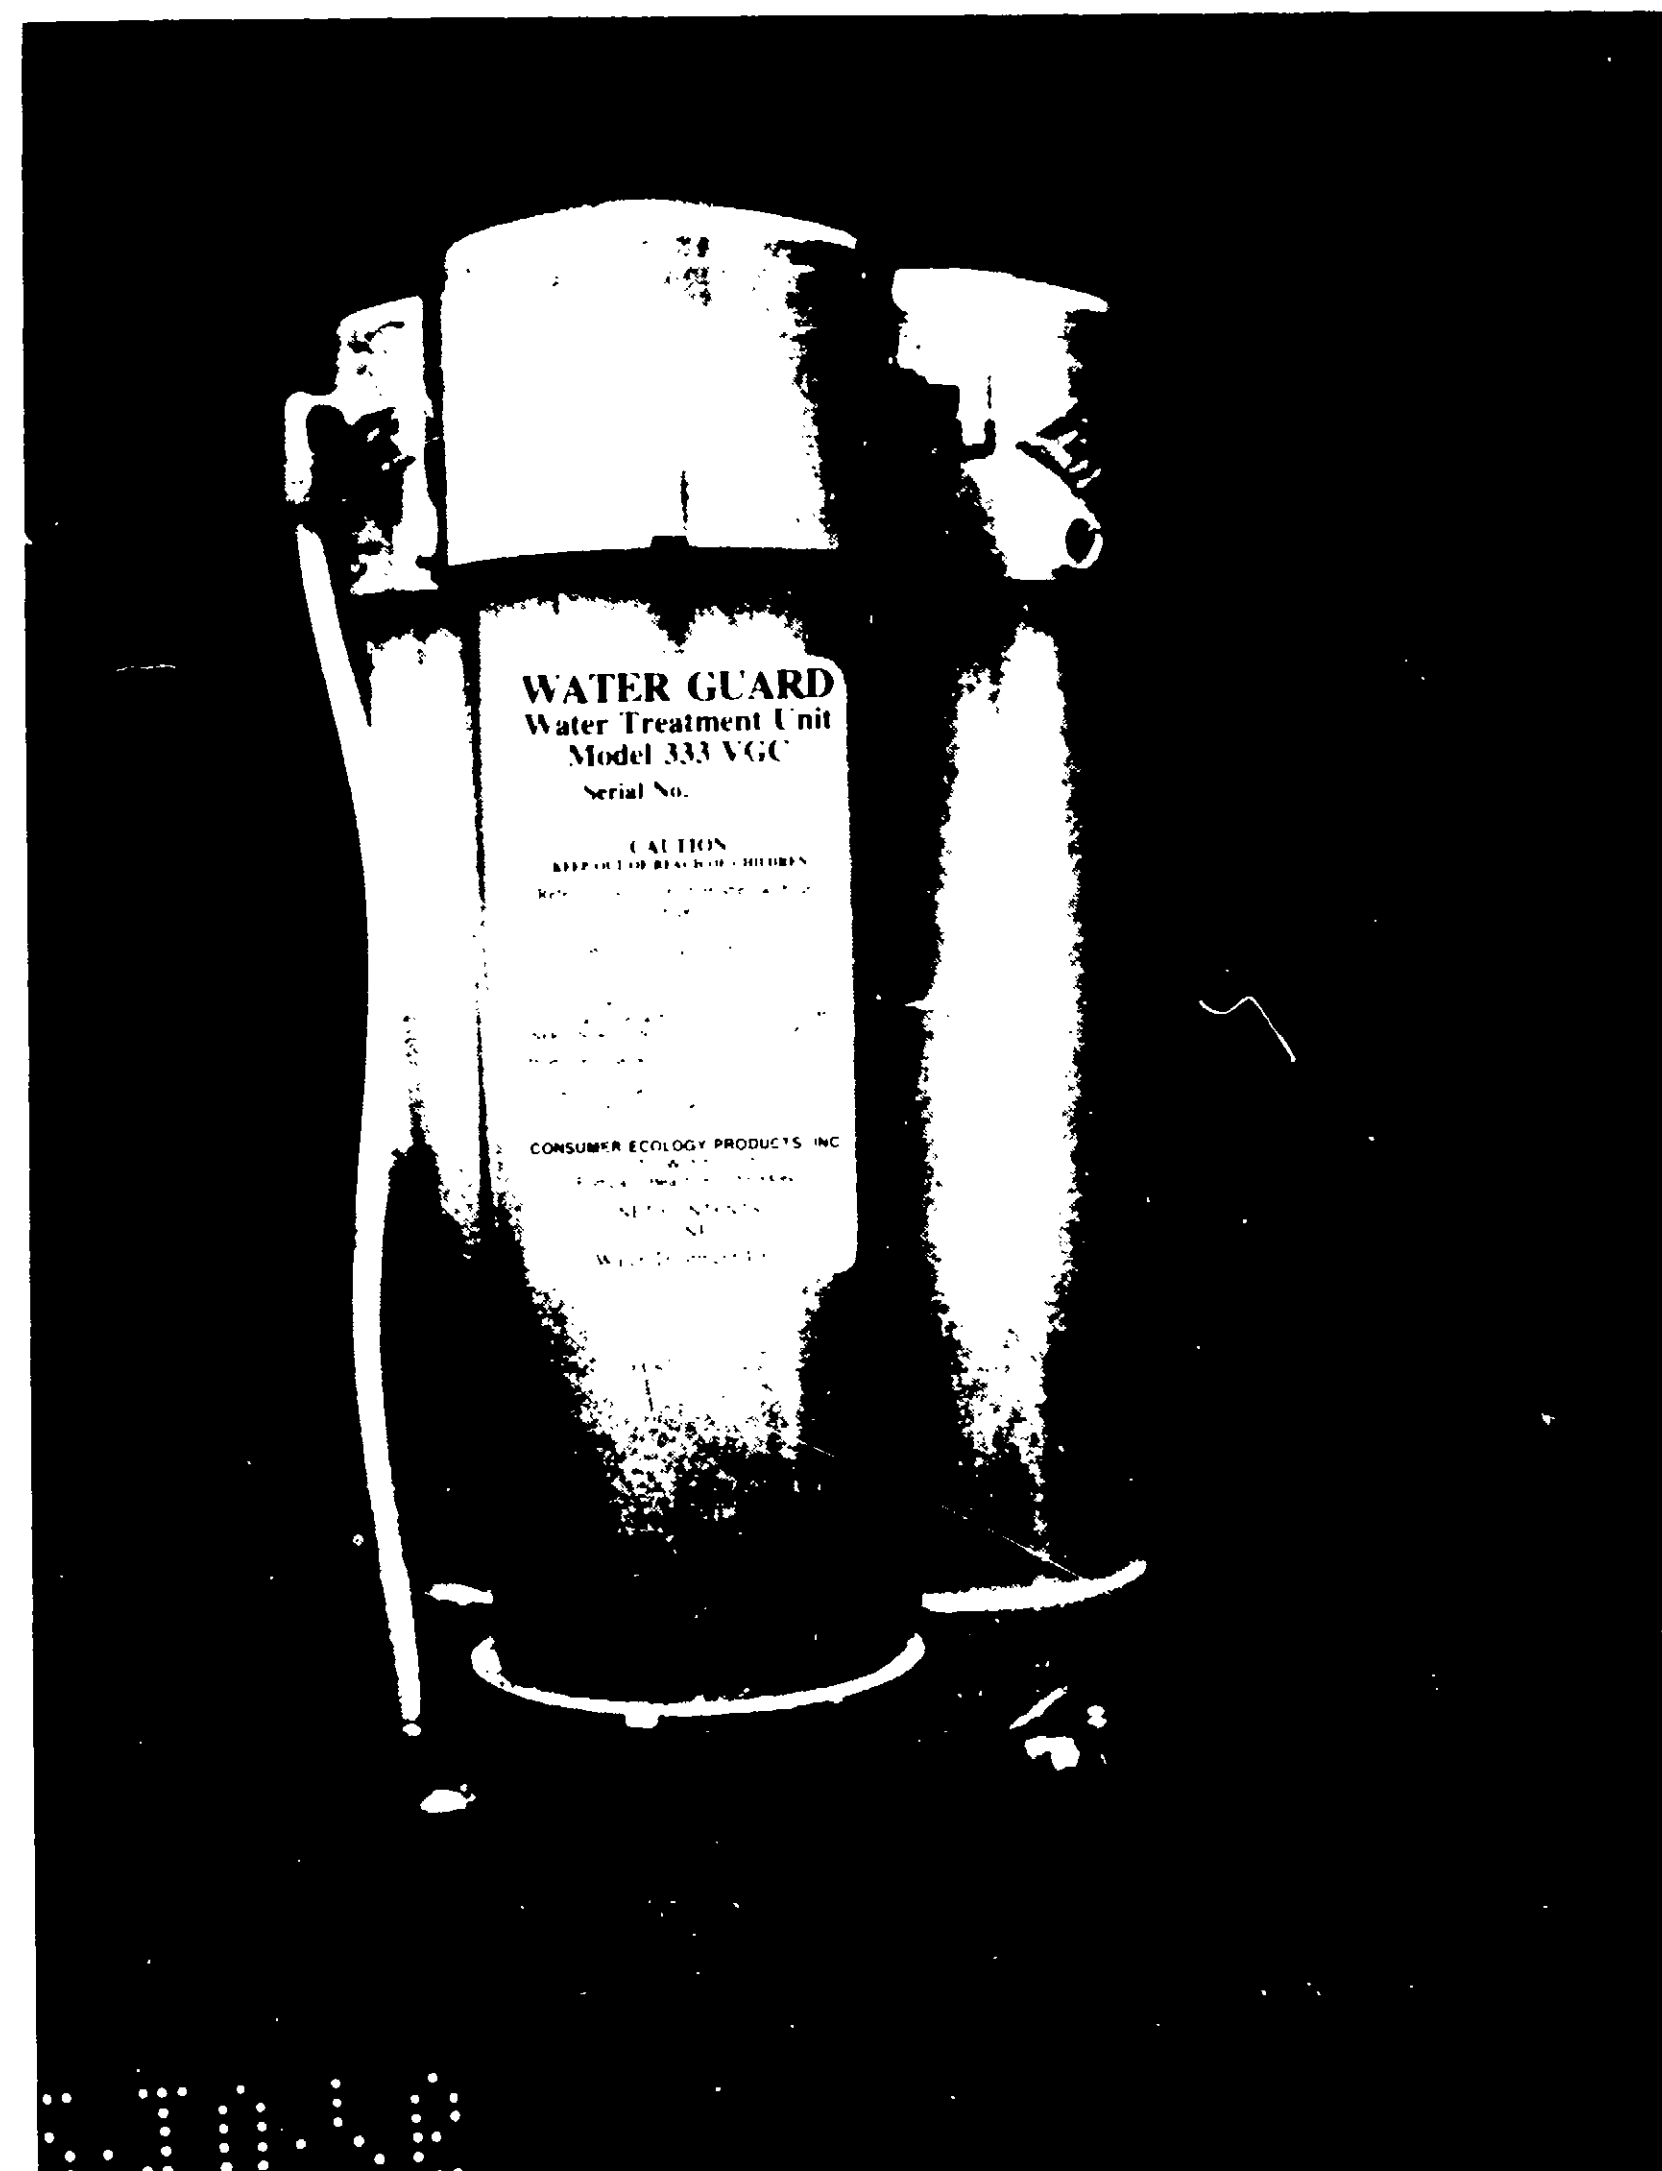

In some cases well water and municipal water contains iron, manganese, or hydrogen sulfide. Iron and manganese may cause bitter tastes and make laundering difficult or cause stains in sinks and toilets. Hydrogen sulfide causes a rotten egg smell. For any of the above problems which are obviously easily recognizable, we have developed the Iron Guard pre-filter. Iron Guard will remove all of the above. Periodic regeneration is all that is required. Other pre-filters are also available to remove tannin, turbidity, etc. In some cases they may be desirable to prevent premature clogging of the Water Guard Unit Model 333 VGC.

WHY NOT BUY BOTTLED WATER?

Bottled water is heavy to handle, inconvenient to transport. Glass bottles can break and cause costly accidents. It's costly. The price varies from 40¢ to 80¢ per gallon.

Water Guard Unit Model 333 VGC has none of these problems. Always fresh, springlike, good tasting water on guard 24 hours a day at the tip of your finger. No mess, fuss or storage. Costs less than 1¢ per gallon.
