DIRECTIONS FOR SWIMMING POOL USAGE:

TO ESTABLISH CHLORINE RESIDUAL, ADD 8 OUNCES FOR EACH 10,000 GALLONS OF WATER, WHICH WILL PROVIDE A RESIDUAL OF 0.7 PPM AVAILABLE CHLORINE. REPEAT DOSEAGE UNTIL A CHLORINE RESIDUAL OF 0.6 TO 1.0 PPM IS ESTABLISHED. TO MAINTAIN THIS RESIDUAL ON A DAILY BASIS, ADD TWO PINTS FOR EACH 10,000 GALLONS OF WATER. IF POOL HAS BEEN STABILIZED WITH CYANURIC ACID, A CHLORINE RESIDUAL OF 0.6 TO 1.5 PPM SHOULD BE MAINTAINED.

POOL WATER SHOULD NOT EXCEED A CHLORINE RESIDUAL OF 2.0 AS WELL AS THE PH OF THE WATER SHOULD BE MAINTAINED BETWEEN 7.2 TO 7.6. IF RESIDUAL CHLORINE OR PH DOES NOT MEET THESE STANDARDS, BATHING SHOULD NOT BE ALLOWED IN POOL. USE PROPER TEST KITS TO ESTABLISH YOUR FINDINGS.

IF SHOCK TREATMENT IS REQUIRED TO ELIMINATE ALGAE, ADD 1/2 GALLON FOR EACH 10,000 GALLONS OF WATER DIRECTLY INTO THE WATER. THIS SHOULD BE DONE IN THE EVENING WHEN THE POOL IS NOT IN USE. FOR EFFECTIVE ALGAE CONTROL, A REGULAR WEEKLY SHOCK TREATMENT IS RECOMMENDED.
