Beekeepers

Beekeepers and seed growers suffer heavy losses when grasshoppers attack. Grasshoppers can damage bees and their hives.

Grasshoppers damage crops in the spring and at the time of harvest. They also damage ornamental plants and trees. Grasshoppers can cause damage to crops and pastures.

How Many Grasshoppers?

During grasshopper outbreaks, a frequent question is: "Where do they all come from?" The answer is: "They come from the eggs of the grasshoppers that were laid the previous year."

The life cycle of a grasshopper is: egg, nymph, and adult. The nymphs are the most damaging stage.

Grasshoppers are most abundant in the spring and at the time of harvest. They also damage ornamental plants and trees.

Even when the infestation is light with an average of six or seven grasshoppers to the square yard, the grasshoppers can cause damage to crops and pastures.
