Q-MIST INSECTICIDE—INDUSTRIAL TYPE

is an effective formulation designed for use in automatic aerosol dispensers.

Used in the Q-MIST Automatic Dispenser the special valve is actuated automatically, emitting 100 mg. doses each 15 minutes. Each dose contains millions of tiny particles which float in the air, killing a high proportion of flies, mosquitoes, gnats, moths and certain other small flying insects.

Usually the effectiveness of Q-MIST Insecticide will be noticeable within one hour after the dispenser is actuated. If less than 24 hour control is required, the dispenser should be set to start one hour before control is desired and run one hour after control is established.

Factors such as air change rate, size and shape of space treated, humidity and temperature affect insect activity and control. One dispenser per 6,000 cubic feet may be considered an average. Best results are achieved when good sanitary practices are used. For best results, mount the dispenser as high as possible and in a location where moving air will carry the spray throughout the desired area.

Active Ingredients:

Pyrethrins	6.90%
*Piperonyl Butoxide, technical	9.0%
Petroleum Distillates	10.1%
Inert Ingredients	80.0%
	100%

*Consists of 7.2% (butylcarbityl or propylpiperonyl) ether and 1.8% of related compounds.

WARNING:

Contents under pressure. Do not store at temperature over 120°F. Do not puncture or incinerate can. Do not reuse container. Destroy when empty. Use 8' or more from exposed food. Do not spray on face or use near polished or varnished surfaces. Do not use in nurseries or room where infants, ill or aged persons are confined.
