 CT Model 1000R  
 # 005648

### REPLACING THE FILTER

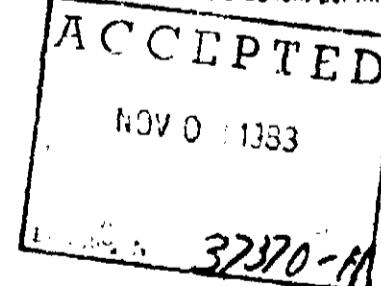

Your Water Washer will provide up to 1,000 gallons of water from a single filter. That's over 2 gallons of good tasting clear water everyday for one full year before the filter needs to be replaced.

In some cases your water supply may contain more than the average level of particulate matter and sediment or you may use more filtered water than normally anticipated. For these reasons, you may notice a faster than average change in the color of the prefilter, a return of the undesirable taste to the filtered water, or a reduced flow rate. This may necessitate a filter change before one year.

To change your filter:

1. Turn off the water flow from the faucet.
2. Take off the canister by twisting counter clockwise.
3. Disconnect the inlet elbow from the canister.
4. Lift the old filter unit from the base and replace it with the new one.
5. Re-connect the inlet elbow.
6. Replace the filter canister by lining up the base and fastening on the base and twisting clockwise into place.
7. Mark the date on the adhesive label and apply the label to the inside of the top cover for easy reference.

**MAXIMUM FLOW RATE: 0.9 Gallons per minute**

**MODEL 1000 R IS TO BE USED WITH THE WATER WASHER COUNTER TOP BACTERIOSTATIC WATER FILTER MODEL 1000, 1000A**

### REPLACEMENT FILTER MODEL 1000 R

Refer to instruction on side panel for proper installation.

**ACTIVE INGREDIENT:** Silver\* 0.624%
