# UNITED STATES ENVIRONMENTAL PROTECTION AGENCY WASHINGTON, D.C. 20460

OFFICE OF PREVENTION, PESTICIDES AND TOXIC SUBSTANCES

June 11, 2006

Randy Sample, Director Regulatory Compliance, Archer Daniels Midland Company Animal Health & Nutrition Division 1000 N. 30th St. Quincy, IL 62301

Subject: Submission of a label amendment in response to an Agency letter dated December 5,

2004.

Product Name: R.O.L. PREMIX (CONTAINS RABON® ORAL LARVACIDE)

EPA Reg. No.: 37774-1

Date of Submission: January 4, 2005

Dear Mr. Sample;

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), is acceptable subject to the comments listed below. Five copies of the finished labeling must be submitted prior to releasing the product for shipment.

#### 1. Page 2 of 2:

Within the "Directions for Use" directly under the statement: "It is a violation of Federal law to use this product in a manner inconsistent with its labeling.", add the following language:

#### "USE RESTRICTIONS"

This product is not to be used on horses destined for slaughter. This product contains tetrachlorvinphos, which is a cholinesterase inhibitor. The most frequently reported clinical signs of cholinesterase inhibition in the horse are abdominal pain, lethargy, sweating, tearing and excessive salivation. If these signs are seen in horses, consult your veterinarian immediately. Do not use this product simultaneously or within a week before or after treatment with cholinesterase inhibiting drugs, pesticides or chemicals. Consult a veterinarian before using this product on debilitated, aged, pregnant or nursing animals. This product has not been tested in breeding horses."

text above that is located within the sub...ader "As a Topdressing". Remove the simi

A stamped copy of the label is enclosed for your records. If you have any questions, you may contact Richard J. Gebken, at (703) 305-6701.

### (CONTAINS RABON® ORAL LARVACIDE)

To prevent the development of Horn Flies. Face Flies, House Flies and Stable Flies in the manure of treated cattle; House Flies in the manure of treated swine, House Flies and Stable Flies in the manure of treated horses and House Flies in the manure of treated mink. This product is not to be used on horses destined for slaughter.

By Weight **ACTIVE INGREDIENT** ..... 7.76%\* Tetrachlorvinghos (CAS Number 961-11-5) OTHER INGREDIENTS 92.24% TOTAL......100.00%

ACCEPTED with COMMENTS In EPA Letter Dated: June 11, 2006

Under the Federal Insections, Fungitica, rad linde . I für het, as amended, for the posticide registered under Era Ler. No. \*RABON Insecticide - Contains 35 grams of RABON per pound. \*\* Refers only to ingredients which are not larvicidal.

## KEEP OUT OF REACH OF CHILDREN CAUTION

#### PRECAUTIONARY STATEMENTS FIDOT AID

	FIRST AID
IF SWALLOWED:	* Call a poison control center or doctor immediately for treatment advice.  * Have person sip a glass of water if able to swallow.
	*Do not induce vomiting unless told to do so by a poison control center or
	doctor.
	*Do not give anything by mouth to an unconscious person.
	*Take off contaminated clothing.
if on skin or clothing:	*Rinse skin immediately with plenty of water for 15-20 minutes.
	*Call a poison control center or doctor for treatment advice.
	"Hold eye open and rinse slowly and gently with water for 15-20 minutes.
IF IN EYES:	*Remove contact lenses, if present, after the first 5 minutes, then continue
	rinsing.
	*Call a poison control center or doctor for treatment advice.
Н	IOT LINE NUMBER
Have the product container or label with you when calling a poisor (800)-858-7378 (The National Pesticide Information Center)	n control center or doctor or going for treatment. In case of emergency, call toll free
NOTE TO PH	YSICIAN AND VETERINARIAN
Poisoning Symptoms: Symptoms include weakness, headache, ti	ightness in chest, blurred vision, non-reactive pinpoint pupils, salivation, sweating,
nausea, vomiting, diarrhea, and abdominal cramps.	
	If symptoms of chlolinesterase inhibitor are present, atropine sulfate by injection is
	y in conjunction with atropine. Atropine is antidotal only if symptoms of cholinesterase
inhibition are present.	, in adaptive and an appropriate and any in a proposition of a contraction and
	MAZADROUS TO LIMANS

#### HAZARDOUS TO HUMANS

CAUTION: Harmful if swallowed or absorbed through skin. Causes moderate eve irritation, Avoid contact with eyes, skin or clothing, Prolonged or frequently repeated skin contact may cause allergic reaction to some individuals. Personal Protective Equipment (PPE) should be used with long sleeved shirt and long pants, shoes and socks and chemical-resistant gloves.

Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. Follow manufacturers instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

#### **USER SAFETY RECOMMENDATIONS**

User should remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

**ENVIRONMENTAL HAZARDS** 

This pesticide is toxic to fish. Do not contaminate water when disposing of equipment wash water.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

STORAGE: Store in a dry place in original container.

DISPOSAL: Completely empty bag into mixing equipment. Then dispose of empty bag in a sanitary landfill or by incineration or if allowed, by State and local authorities by burning. If burned, stay out of smoke. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

#### R.O.L. PREMIX

#### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Rations containing this product may be fed up to slaughter and to lactating dairy cows without withholding the milk from market during or after treatment.

Start feeding RABON® larvicidal feeds early in the spring before flies begin to appear and continue feeding throughout the summer and into the fall until cold weather restricts fly activity.

When fed, this product passes through the digestive system into the animal's manure where it kills (ly larvae on contact shortly after fly eggs hatch.

It prevents the development of fly larvae in the manure of treated animals, but is not effective against existing adult files.

In some cases, supplemental fly control measures may be needed in and around cattle lots and barns to control adult house flies and stable flies which can breed not only in manure but in other decaying vegetable matter or silage on the premises.

In order to achieve optimum fly control, this product should be used in conjunction with other good management and sanitation practices.

This product will mix uniformly in feeds when standard mixing procedures are followed. Thus, usual problems that are common to all feed preparation and which cause stratification, such as excessive free-fall or excessive handling, are to be avoided. It is recommended that appropriate preblending techniques be employed to assure adequate distribution throughout the feed mix. The premix should be preblended with ground grain, protein supplements, mineral mixes, etc. before being added to roughage such as chopped hay or silage. Mixing time should be adequate to assure uniform dispersion. Optimum performance can be assured only if this product is dispersed uniformly with the feedstuff at the recommended level. Common feed mixing equipment (i.e. vertical mixers, horizontal blenders, mixer/feeder truck) may be used to prepare formulated feeds.

#### CATTLE

#### In A Concentrate Feed - Roughage Fed Separately

This product can be used to prepare concentrate feeds that will provide 70 mgs. of RABON per 100 pounds of body weight daily. To prepare a larvicidal concentrate feed, mix this product according to the amount of concentrate to be fed per animal per day. Use the following table as a guide for determining the proper mixing rate.

#### MIXING DIRECTIONS Pounds of Concentrate RABON in the Pounds of RABON 7.76% Consumed per Animal Concentrate Oral Larvacide Premix per Day per Ton of Concentrate ma/lb 5 1584 0.35 90.0 1.0 792 0.18 45.0 1.5 528 0.12 30.0 2.0 396 0.087 22.5 5.0 159 0.035 9.0 10.0 79 0.018 4.5 15.0 53 0.012 3.0 20.0 39 0.0087 23 25.0 32 0.0069 1.8 30.0 26 0.0059

Feed the appropriate larvicidal concentrate indicated to cattle weighing between 400 and 1200 pounds. For larger cattle weighing between 1200 and 1700 pounds, increase the amount of premix per ton of concentrate to 1½ times that indicated.

#### CATTLE

#### In a Complete Ration - No Other Roughage Feed

This product can be used to prepare rations containing 26.4 mg of RABON per pound of complete ration.

To prepare a larvicidal ration, mix 1.5 pounds of this product per ton of complete mixed ration containing both grain and roughage.

Full feed this larvicidal complete ration to feeder cattle weighing from 400 to 1400 pounds or to dairy cattle at a rate to sustain milk production, but not less than 2.6 pounds of the ration per 100 pounds of body weight daily.

#### SWINE

#### All Swine Should Be Treated

Pigs (Weaners To Market Weight): Mix 1.3 pounds of this product per ton of meal type feed and offer free choice. This is equivalent to 22.7 mg of RABON per pound of feed. Sows, Boars and Breeding Gilts: Mix 2.6 pounds of this product per ton of meal type feed and offer 4-6 pounds of feed per animal per day. This is equivalent to 45.4 mgs. of RABON per pound of feed.

#### HORSES

#### In a Concentrate Feed

This product can be used to prepare concentrate feeds that will provide 70 mgs. of RABON per 100 pounds of body weight daily. All horses in the stable area should be treated.

To prepare a larvicidal concentrate feed, mix this product according to the amount of concentrate to be fed per day. Use the following table as a guide for determining the proper mixing rate.

M	IXING GUIDE	:		
Pounds of Concentrate	Pounds of RABON 7.76% Oral Lavicide Premix per Ton of Concentrate			
Consumed per Horse per Day				
	250 lb	500 lb	1000 lb	2000 lb
	Horse	Horse	Horse	Horse
2.5	4.0	8.0	16.0	32.0
5.0	2.0	4.0	8.0	16.0
10.0	1.0	2.0	4.0	8.0
15.0	0.7	1 4	27	5.4

#### As a Topdressing

Add this product to the grain or concentrate portion of the horse's diet to provide 70 mg of RABON per 100 pounds of body weight. This is equivalent to the following: ½ tablespoon for a 250 lb animal, 1 level tablespoon for a 500 lb animal, 2 level tablespoons (8.8 g) for a 1000 lb animal, or 4 tablespoons for a 2000 lb animal.

All horses in the stable area should be treated. This product is not to be used on horses destined for slaughter.

This product contains tetrachloreinphos, which is a cholinesterase inhibitor. The most frequently reported clinical signs of cholinesterase inhibition in the horse are abdominal pain, lethargy, sweating, tearing and excessive salivation. If these signs are seen in horses, consult your veterinarian immediately. Do not use this product simultaneously or within a week before or after treatment with cholinesterase inhibiting drugs, posticides or chemicals. Consult a votorinarian before using this product on debilitated, aged, pregnant or nursing animals. This product has not been tested in breeding horses.

#### MINK

When fed to mink, RABON passes through the digestive system into the droppings where fly larvae are killed on contact shortly after the fly eggs hatch. This product can be mixed in mink feeds to prevent the development of house flies but should be used as the sole method of control. It is recommended that appropriate preblending techniques be employed when mixing an adequate distribution of RABON throughout the feed mix. Preblend with soybean meal, alfalfa meal, mineral mix, etc. before being added to other ingredients. Common feed mixing equipment (i.e. vertical mixers, horizontal blenders) may be used to prepare formulated feeds.

Add this product to the total feed at a rate that will ensure that each animal will consume 3 mg of RABON per kg of body weight (1-2 mg/pound) per day. Use the following table as a guide

#### MIXING GUIDE FOR MINK

Amount of RABON 7.76% to Mix in Food

Food Consumed (lb) Daily per Animal	500 lb	1000 lb	2000 lb_	
0.10	318 głams	1.4 lb	2.8 lb	
0,25	114 grams	237 grams	1.0 lb	
0.33	90 grams	180 grams	360 grams	
0.50	59 grams	118 grams	236 grams	
0.75	40 grams	80 grams	160 grams	
1.00	35 orams	70 crams	140 grams	

Start feeding mink larvicidal feeds early in the spring before flies begin to appear and continue feeding throughout the summer until cold weather restricts fly activity. Supplemental adult fly control measures may be needed in and around the animal facilities and feed building to control adult flies, especially house flies that can be bred in many kinds of organic matter.

In order to achieve fly control this product should be used in conjunctions with other food management and sanitation practices.
