DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

TAGR/2000 is used to control the growth of bacteria in commercial and industrial recirculating cooling water systems, and industrial, non-potable water supply systems. It should not be used in water intended for drinking or food preparation. Before treatment with TAGR/2000 is begun, cooling water systems should be cleaned thoroughly to remove slime and other deposits. Then they should be drained, refilled with water, and treated with an initial slug dose of 2.5 to 10 fluid ounces of TAGR/2000 per 1000 gallons of water in the system. Repeat until control is evident. Then treat with 0.5 to 10 fluid ounces per 1000 gallons of water every 1 to 5 days, as needed. To control the growth of bacteria in industrial water supply systems, treat with 0.5 to 5 fluid ounces of TAGR/2000 per 1000 gallons of water entering the system, continuously or as needed.
