ALL CONTAINS

DIRECTIONS FOR USE GENERAL CLASSIFICATION

Imperial Chlor No. 2 is a disinfectant and sanitizer.

TO SANITIZE DAIRY EQUIPMENT: Apply Imperial Chlor No. 2 to all dairy equipment, including milking machines, or other similar equipment, as a sanitizer. Use 1 ppm available chlorine. Use Imperial Chlor No. 2 in 9 gallons of water. Test for residual chlorine periodically. Do not allow chlorine to remain in contact with equipment for more than 24 hours.

LAUNDRY BLEACH: Use 1 gallon of Imperial Chlor No. 2 in 15 gallons of water. Use 2 quarts of Imperial Chlor No. 2 in 100 gallons of water. Do not use in more dilution than will be used as a laundry bleach. This preparation should be discarded per manufacturer's instructions.

DISINFECTING DRINKING WATER: Always consult local health officials and follow their instructions and recommendations. In general, add sufficient Imperial Chlor No. 2 to obtain a residual chlorine concentration of at least 1 ppm throughout the system, as determined by a chlorine test kit. Let water stand at least 30 minutes after chlorinating before use. The actual amount of chlorine required varies considerably with water hardness. Some systems may require the addition of 2 ppm. In ppm of chlorine to obtain sufficient disinfection. Do not drink water is affected until the residual chlorine level exceeds 0.25 ppm.

NOTE: This product reacts with acid. Use a chlorine test kit to measure chlorine as necessary to obtain the required level of available chlorine.

STORAGE AND DISPOSAL: Store in a cool, dry area away from direct sunlight. In case of spill, flood area with large quantities of water. Rinse empty container thoroughly with water and return to manufacturer or local health official. In case of collection or burying in an approved landfill. If a drum or container cannot be used, should be diluted with water and disposed of in a sanitary sewer. Do not contaminate food or feed by storage, disposal or cleaning of equipment.
