

Bio-Syn 160-50 will control algae and bacterial slimes found in recirculating cooling tower waters and oil field water flood.

Bio-Syn 160-50 helps clean and loosen slime debris from cooling and flooding system surfaces. When used in slug doses, no other microbicide is required.

Bio-Syn 160-50 is economical to use because it is concentrated. It should be handled with care.

DIRECTIONS FOR USE

GENERAL CLASSIFICATION

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

To control algae and bacterial slimes, use Bio-Syn 160-50 as directed. For best results, slug feed. The frequency of addition of microbicide needed depends on many factors. To optimize your use of Bio-Syn 160-50, follow this procedure:

Recirculating Cooling Towers

1. Initially use 8 fluid ounces per 1000 gallons of water to be treated (20 ppm active quaternary).

Should the above dosage not give satisfactory results, use 9 fluid ounces per 1000 gallons of water.

Repeat the initial dose every seven days or increase the frequency if needed.

2. When the above treatment level is successful, use 2 to 3 fluid ounces per 1000 gallons of water to maximize efficiency. Repeat weekly as needed.

Should slime develop again, go back to initial dosage.

Cooling tower waters that are inherently low in algae growth and bacteria count may be adequately controlled by the lower range of these dosages; slug fed every seven days.

Dilute the appropriate amount of Bio-Syn 160-50 in 1 or 2 gallons of water, then add to the tower. Note, this product weighs 7.88 lbs per gallon (at 20°C).

Should tower be heavily fouled, a pre-cleaning is required.

Oil Field Water Flood or Salt Water Disposal Systems: (Do not apply in Marine and Estuarine Oil Fields)

1. For the control of slime forming and sulfate reducing bacteria in oilfield water flood or salt water disposal systems, add 5-10 ppm (active) Bio-Syn 160-50 (1% - 3 gallons per 3000 barrels of water) continuously. Levels for effective control will vary depending on conditions at the site.

2. For intermittent use, dose at a rate of 5-20 ppm (active) Bio-Syn 160-50 (1% - 8 gallons per 3000 barrels of water) for 4-8 hours per day, one to four times a week as needed to maintain control.

Add Bio-Syn 160-50 directly from the drum with the proper type of metering equipment. This product weighs 7.88 lbs/gallon (at 20°C).
