### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

7619 is used to control scale, corrosion, algae, and bacterial recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algae growth, microbiological slime, and other deposits. An initial slug addition of 4 to 10 fluid ounces of 7619 per 1000 gallons of water to provide a concentration of 32 to 80 parts per million of 7619, based on the total weight of water in the system, is recommended. Repeat initial dosage until control is evident.

Subsequent slug additions of 1.0 to 10.0 fluid ounces of 7619 per 1000 gallons of water (8 to 80 parts per million of 7619) should be employed every 2 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.

#### CONTINUOUS FEED METHOD

**INITIAL DOSE:** When the system is noticeably fouled, apply 4 to 10 fluid ounces of 7619 per 1000 gallons of water used in the system.

**SUBSEQUENT DOSE:** When microbial control is evident, add 1.0 to 10.0 fluid ounces of 7619 per 1000 gallons of water used in the system per day.

7619 is used to control scale, corrosion, and bacterial industrial air washing systems that maintain effective mist eliminating components. Prior to its use, systems should be cleaned to remove bacterial slime and other deposits. An initial slug dose of 14.8 to 24.7 fluid ounces of 7619 per 1000 gallons of water is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 10.1 to 24.7 fluid ounces of 7619 per 1000 gallons of water should be employed each 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and severity of the bacterial problem. Slug additions may be made to the sump or to the water collection trays.
