Recommended Dosages:

PAPER OR TEXTILE COATING.....0.05 – 0.15 %
(0.5 to 1.5 lb of PREVENTOL® BIT 20N to use per 1000 lb of material to be protected)

PULP AND PAPER MILL SYSTEMS

The preferred method of addition is by shock dosing because this ensures that a high concentration of PREVENTOL® BIT 20N is present in the system for several hours. If a slime control agent is added by continuous methods over periods of several hours, its concentration in the system at all times is low which can lead to the development of resistant organisms. This is less likely to occur when the shock dosing method is used.

It is not possible to give precise recommendations as to the quantity of PREVENTOL® BIT 20N to add to control slime formation, because the magnitude of the problem varies greatly from mill to mill, depending on the furnish employed, the cleanliness of the mill system, and the additional nutrients (for example, starch) that may be added to the stock.

For a trial the following quantities of PREVENTOL® BIT 20N are suggested:

Shock dosing: Between 2.5 to 9 ounces of PREVENTOL® BIT 20N for each ton of paper produced per day as a single shock dose, should be sufficient for most slime problems. This addition may be made to any part of the stock preparation or backwater system or may be made to those parts of the system where it is known that slime deposits accumulate.

Continuous addition: PREVENTOL® BIT 20N should be added continuously for either the single period of 8 hours during every 24 hours or for two separate periods of 4 hours during every 24 hours. PREVENTOL® BIT 20N should be metered into the recirculated backwater at a rate of 7 to 8.5 ounces for each ton of paper produced during the dosing period.

LEATHER

PREVENTOL® BIT 20N is effective for the protection of leather processing solutions to preserve the solutions. PREVENTOL® BIT 20N is also intended to protect fresh animal hides or skins to preserve the integrity of the hides and skins before or during processing.

Add the appropriate quantity of PREVENTOL® BIT 20N to the brine solution during the curing operation or treat hides or skins with an appropriately diluted aqueous solution during other portions of the processing operation. The specific use rate and contact time needed to control microbial attack will depend on the degree of decomposition of the hides or skins prior to treatment.

Recommended Dosages:

LEATHER PROCESSING SOLUTIONS0.025 – 0.20 %
(0.25 to 2 lb of PREVENTOL® BIT 20N to use per 1000 lb of material to be protected)

FRESH ANIMAL SKINS AND HIDES1 to 24 lb (13 fluid ounces to 2.5 gallons) of PREVENTOL® BIT 20N to use per 1000 lb of hides or skin.

SEED COATING

PREVENTOL® BIT 20N is effective for the protection of in-can preservation of Seed Coatings Materials which includes, but is not limited to, colorants, dyes, seed coatings, and pesticide formulations up to 500 ppm of PREVENTOL® BIT 20N.

PREVENTOL® BIT 20N is exempt from tolerance under 40 CFR 180.920: Materials exempted from the requirements of a tolerance when used in accordance with good agricultural practice as an inert (or occasionally active) ingredients in pesticide formulations applied to growing crops only.

Recommended Dosages:

Seed Coating0.05 – 0.50 %
(0.5 to 5 lb of PREVENTOL® BIT 20N to use per 1000 lb of material to be protected)
