

GOSSETT G-F SWINE PRE-MIX No. 37

DIRECTIONS FOR USE
GENERAL CLASSIFICATION

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Gossett G-F SWINE PRE-MIX No. 37 is designed specifically for balancing modern-day confinement corn-soybean rations for growing-finishing swine. Add fifty (50) lb. per ton of complete ration. Feed from 50 lb. to market.

Offer the above ration free-choice. This is equivalent to 22.7 mg. of RABON per lb. of feed.

G-F Swine Pre-Mix No. 37 may be fed up to slaughter.

G-F Swine Pre-Mix No. 37 prevents the development of house flies in the manure of treated hogs but is not effective against existing adult flies. When starting a feeding program during the fly season, it may be necessary to use other control measures to reduce the population of existing adult flies.

Supplemental fly control measures may be needed in and around hog lots and buildings to control adult house flies and stable flies which can breed not only in hog manure but in other decaying vegetable matter or silage on the premises.

In order to achieve optimum fly control, G-F Swine Pre-Mix No. 37 should be used in conjunction with other good management and sanitation practices.
