DIRECTIONS FOR USE GENERAL CLASSIFICATION

It is a violation of Federal law to use this product in a manner inconsistent with the label.

Microbiocide W-15 is used to control algae, bacteria, and fungi in industrial water cooling towers. Prior to its use, systems must be cleaned of microbiological slime, and other deposits. An initial slug addition of Microbiocide W-15 per 1000 gallons of water to provide a concentration of Microbiocide W-15, based on the total weight of water in the system, is required. Subsequent slug additions should be made in the system until control is evident.

Subsequent slug additions of 1.0 to 10.0 fluid ounces of Microbiocide W-15 per 1000 gallons of water (8 to 80 parts per million of Microbiocide W-15) should be employed as needed. The frequency of addition depends upon the relative amount of the microbiological problem. Slug additions should be made in the system until control is evident.

Microbiocide W-15 is used to control bacteria in industrial air-wash systems. It is used as an effective mist eliminating component. Prior to its use, systems must be cleaned of bacterial slime and other deposits. An initial slug dose of 14.8 to 24.7 fluid ounces of Microbiocide W-15 per 1000 gallons of water is recommended. Repeat initial dose of 10.1 to 24.7 fluid ounces of Microbiocide W-15 per 1000 gallons of water should be employed each 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and severity of the bacterial problem. Slug additions should be made in the system until control is evident. Slug additions should be made in the sump or to the water collection trays of the airwash system.
