

**ANTIBAC** is based on a highly-active mixture of three *Twin Chain* quaternary ammonium compounds together with an effective fabric softener.

Soiled and contaminated fabrics such as diapers, hospital and institutional linen and athletic equipment is a major housekeeping problem not only in hospitals but in institutions, hotels, restaurants and schools. Used as directed **ANTIBAC** imparts an effective residual bacteriostatic treatment together with softening to laundered items such as diapers, hospital and institutional linens and athletic apparel. This finish will effectively protect the fabric against rapid bacterial growth caused by moisture and wet contamination.

**ANTIBAC** is designed for commercial and institutional laundry use by addition to the final rinse. Laundered fabric may also be treated and softened by soaking in a solution of **ANTIBAC**. For recommended solution concentration, see "Use Directions".

Fabrics treated with recommended use-concentrations of **ANTIBAC** were found to be non-irritating to human skin.

**ANTIBAC** Bacteriostatic Laundry Softener Concentrate is economical to use because it is concentrated. It should be handled with care.

#### GENERAL CLASSIFICATION

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

—To soften laundered fabrics and obtain residual bacteriostatic activity against gram negative and/or gram positive odor-causing bacteria, use 1.00 fluid oz. (2 teaspoons) per 100 lbs of fabric (dry weight.)

Dilute the appropriate amount of **ANTIBAC** in one to two gallons of water; then add to the washwheel in the final rinse.

Retreat fabric after each washing.
