

1 of 1 # 41260-5 PM

**Algicide** is a concentrated solution of a quaternary ammonium chloride and is a most effective agent to control the growth of algae in public and private swimming pools. Continued usage, as directed, will improve the appearance and cleanliness of the pool. **Algicide** is stable. It may be stored for prolonged periods of time without losing strength or effectiveness.

**PRECAUTIONARY STATEMENTS: Hazards to humans and domestic animals.**

**WARNING:** Keep out of reach of children. Do not get in eyes, skin, or on clothing. Causes severe eye irritation. Causes skin irritation. In case of contact, wash immediately with plenty of water. For eyes, get medical attention immediately. Harmful if swallowed. Avoid contamination of foods.

Remove and wash contaminated clothing before reuse. Avoid alcohol.

**STATEMENT OF PRACTICAL TREATMENT**

**FIRST AID:** If swallowed, do not induce vomiting. Drink large quantities of fluids and call a physician immediately. Rinse empty container thoroughly with water and discard it. (Use goggles or face shield when handling.)

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all directions carefully before using.

**INITIAL DOSE:** One (1) pint for each 3,000 gallons of water or 8 oz. (1 cup) for each 1,500 gallons of water. Apply to freshly filled clean pools.

**CONTINUING DOSE:** One quart for each 25,000 gallons of water every 2 days in warm, sunny or humid weather. Every 3 to 5 days in cool or cloudy weather.

**BOOSTER DOSE:** Add one (1) quart for each 25,000 gallons water or 2 ozs. for each 1500 gallons of water after a heavy or prolonged rainfall. Increase continuing dosage slightly or apply more frequently whenever the bathing load is unusually heavy.

The pool should be properly cleaned and filled with fresh water before beginning the algicide treatment. However, if it is impractical to empty the pool and growth of algae is visible, use 1 gallon for each 5000 gallons overnight. By morning the withered algae will have fallen down or may be brushed to the bottom and then be swept out, while the level of the pool is dropped one or two feet.

Then apply the initial dose of 1 gallon in 25,000 gallons of water.

**WADING POOLS:** Use larger doses in wading pools because of the smaller amount of water per bather. Add 2 oz. of **Algicide** for each 150 gallons of fresh water as pool is being filled. Repeat with 1 oz. for each 300 gallons every four days. In hot, sunny weather, repeat every two days.

**Algicide** requires no special equipment for applications. It may be poured directly into the water from any point around the pool or through any water circulating system. At normal dosages, **Algicide** is compatible with all chemicals normally used in swimming pools. It will conserve their effectiveness.

**ENVIRONMENTAL HAZARDS:**

This product is toxic to fish. Do not discharge treated effluent where it will drain into lakes, streams, or ponds.

**IMPORTANT:** Never mix chemicals together but apply each separately as directed.

**STORAGE AND DISPOSAL:** Keep from freezing. Keep container closed when not in use. Do not reuse container. Thoroughly rinse empty container with water then destroy by placing in trash collection. In case of spill or leak, flush with plenty of water.
