

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS & DOMESTIC ANIMALS**

DANGER: Corrosive, may cause severe skin irritation or chemical burns to broken skin. Causes eye damage. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves when handling this product. Wash after handling. Avoid breathing vapors. Vacate poorly ventilated areas as soon as possible. Do not return until odors have dissipated.

ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish. Keep out of lakes, streams or ponds. Treated effluent may not be discharged into lakes, streams, ponds or public waters without a valid discharge permit. For guidance, contact the regional office of the Environmental Protection Agency.

PHYSICAL AND CHEMICAL HAZARDS: STRONG OXIDIZING AGENT: Mix only with water according to label directions. Mixing this product with gross filth such as feces, urine, etc., or with ammonia, acids, detergents or other chemicals may release hazardous gases irritating to eyes, lungs and mucous membranes.

INERT INGREDIENTS

Directions for use of sodium hypochlorite solution for swimming pool chlorination and sanitizing.

For new pools, add 1 part sodium hypochlorite solution to 100 gallons of water. Adjust pH to 7.0.

For Pool Maint. Add 1 part sodium hypochlorite solution to 100 gallons of water. Adjust pH to 7.0.

For maintenance, add 1 part sodium hypochlorite solution to 100 gallons of water. Adjust pH to 7.0.

For maintenance, add 1 part sodium hypochlorite solution to 100 gallons of water. Adjust pH to 7.0.

For maintenance, add 1 part sodium hypochlorite solution to 100 gallons of water. Adjust pH to 7.0.

**DIRECTIONS FOR USE
GENERAL CLASSIFICATION**

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT
IN A MANNER INCONSISTENT WITH ITS LABELING

DIRECTIONS FOR SWIMMING POOL CHLORINATION

For new pools or for springs stuff up superchlorinate with one 1/2 pint (16 fl. oz.) of sodium hypochlorite solution for each 3000 gallons of water. This dosage is equivalent to 5 ppm available chlorine. Allow to stand for 24 hours.

A. Adjust pH to 7.6-7.7 range and maintain.

B. Add chlorine to a feeder device this sodium hypochlorite solution at a rate to maintain a residual chlorine residual of 0.6 to 1.0 ppm. One fourth pint (16 fl. oz.) of sodium hypochlorite solution for each 4000 gallons of water will produce 0.6 ppm available chlorine by weight. Frequency of additions to maintain 0.6 to 1.0 ppm residual chlorine will depend on the temperature and number of swimmers. Check chlorine levels often and make sure they are in the proper range.

**DIRECTIONS FOR DISINFECTION OF POTABLE WATER
FOR HOME WELL WATER SYSTEMS**

B. Mix the sodium hypochlorite solution in the ratio of one part sodium hypochlorite solution to three parts softened water. Mix sodium hypochlorite solution and water thoroughly and begin feeding it to a well with a pump or booster metering pump. Maintain a free available chlorine level of at least 0.2 ppm and no more than 0.6 ppm throughout the distribution system as determined by a DPD chlorine test kit. Bacteriological sampling must be conducted at a frequency specified in the standard that is provided by the National Interim Primary Drinking Water Regulations. Chlorine levels must be checked with a DPD chlorine test kit.

Check chlorine levels often and make sure they are in the proper range.

DIRECTIONS FOR SANITIZING FOOD PROCESSING OR DAIRY EQUIPMENT

Disinfect equipment the normal manner. Just before using, rinse all surfaces thoroughly with this sodium hypochlorite solution containing 200 ppm available chlorine. Maintain contact with disinfectant for a minimum of two minutes. Do not reuse with water after treatment with sodium hypochlorite solution. Do not soak overnight. Addition of one fluid oz. (12 teaspoons) of this sodium hypochlorite solution per gallon of water will provide approximately 200 ppm available chlorine.

NOTE: Do not use with water containing less than 100 ppm available chlorine as a dilution factor.

STORAGE AND DISPOSAL:

Store in a cool dry area away from direct sunlight. In case of spill, flood area with large quantities of water. Rinse equipment thoroughly with water and either return to manufacturer or dispose in trash container or incinerator in an approved landfill. Product or residue that is left to accumulate on walls and equipment of rinsing tanks or sewer. During disposal, do not allow to accumulate on walls and equipment.
