PRODUCT INFORMATION

TCI Dithane Seed Treatment is a formulation designed for the treatment of wheat, oats, barley, rye, sorghum and safflower and rice in the drill-box at planting time. It will control bunt of wheat and rye, covered smuts of oats and barley, covered kernel smut of sorghum, seed-borne rust of safflower, and damping-off, seed rot and seedling blights on all labeled crops. TCI Dithane Seed Treatment is formulated with graphite to assure good plantability of treated seeds.

DIRECTIONS - Measuring scoop enclosed. One level scoop equals 1 ounce

- RATE - Wheat, oats, barley, rye, - Use 2 ounces per bushel of seed.
- Sorghum and Safflower - Use 3 ounces per 100 pounds of seed.
- Rice - Use 4 ounces per 100 pounds of seed.

Apply as a drill-box treatment, mixing thoroughly so that all seeds are covered. For best results, the following procedure is suggested: Fill drill-box only half-full of seed, add half the amount of Dithane Seed Treatment and mix thoroughly with a stick or paddle; then add remainder of seed and product to drill-box, again mixing thoroughly.
