**ENVIRONMENTAL HAZARDS:** This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, ponds, streams, estuaries, oceans, or public waters unless in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA.

**PHYSICAL AND CHEMICAL HAZARDS:**

Strong Oxidizing Agent. Mix only with water. Use clean dry utensils. Do not add this product to any dispensing device containing remnants of any other product. Such use may cause a violent reaction leading to fire or explosion. Contamination with moisture, organic matter, or other chemicals may start a chemical reaction, with generation of fire and explosion. In case of contamination or decomposition, do not reseal container. If possible isolate container in open air or well ventilated area. Flood with large volumes of water, if necessary.

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read entire label and use strictly in accordance with precautionary statements and directions.

**FOR SWIMMING POOLS**

Condition pool with stabilizer. Follow directions for use on label stabilizer. Omit if this was done previously.

Check residual chlorine with a reliable test kit. If below 1.0 ppm add 10 ounces of Quick Dissolve per 10,000 gallons. Repeat this

dosage until a chlorine residual level of 1.0 to 1.5 ppm has been established. Add product to water by broadcasting over pool surface, preferably at deep end.

Maintain residual chlorine. Add Quick Dissolve daily or as needed to maintain 1.0 to 1.5 ppm residual chlorine. (Two ounces of this product supplies 10 ppm chlorine to 10,000 gallons of water.) Additional dosages may be required during excessively hot weather or when many people are using the pool.

Measure pH immediately and at least once each week with a reliable pool test kit. Adjust pH to 7.2 – 7.8 as necessary. pH can be decreased by adding a pH minus product or increased by adding a pH plus product. Follow directions for use on labels of these products.

**SUPERCHLORINATION**

It is a good practice to superchlorinate every 2-4 weeks. To superchlorinate, add 10 ounces Quick Dissolve. Resume regular program when residual chlorine level falls to 1.0 -1.5 ppm.

NOTE: Re-entry into treated swimming pools is prohibited above levels of 3.0 ppm of chlorine.

**FOR SPAS AND HOT TUBS**

To chlorinate: Add ½ ounce of Quick Dissolve per 500 gallons of water to the water prior to entering the spa or hot tub. Wait 5 minutes, then check the chlorine residual. Residual chlorine must read between 2 to 3 ppm. If it does not, additional dosages of material should be added until it does. Once the chlorine residual is established in the 2.0 to 3.0 ppm range, the water may be entered.

Maintenance: Quick Dissolve should be added daily or as necessary to maintain 2.0 to 3.0 ppm residual chlorine. Frequent checks should be made of residual chlorine using a reliable test

5/6

kit. The product should be broadcast over the surface of the water and allowed at least 5 minutes mix time before sampling. Note: Heavy bather usage or the use of oils or lotions may increase the chlorine demand of the spa or hot tub resulting in the need for more frequent checks on chlorine residual. Check pH: pH should be monitored with a reliable test kit and maintained in the 7.2 to 7.8 range for clean, sparkling water. pH can be decreased by adding a pH minus product or increased by adding a pH plus product. Follow directions for use on labels of these products. Superchlorination: It is a good practice to superchlorinate every 2-4 weeks. To superchlorinate, add 1 ounce Quick Dissolve for each 500 gallons of water. Thoroughly clean spa or hot tub, vacuum and cycle through filter. Resume program when chlorine residual reads 2.0-3.0 ppm. NOTE: Re-entry into treated spa is prohibited above levels of 3.0 ppm of chlorine.
