

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

MAR 23 1992

Mr. E. J. Castagnoli  
President  
York Chemical Corporation  
3309 E. Carpenter Freeway  
Irving, TX 75062

Dear Mr. Castagnoli:

Subject: Olympic Granular 90  
EPA Registration No. 42177-26  
Your Amendment Dated March 25, 1991  
and Received September 30, 1991

This is in response to your amendment to update the revised label for the subject product.

The labeling referred to above submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act, as amended is acceptable subject to the following comments:

1. Include the "Environmental Hazards" heading before the paragraph beginning with the statement "This pesticide is toxic to fish."
2. In the same paragraph, revise the statement "Do not contaminate water by ..... wastes" to read "Do not contaminate water when disposing of equipment washwaters."

A stamped copy is enclosed for your records. Submit five copies of the final printed label.

If you have any questions about these comments, please call Marianne Clark at (703) 305-7879.

Sincerely yours,

Ruth Douglas  
Product Manager (32)  
Antimicrobial Program Branch  
Registration Division (H7505C)

### SPECIAL PRECAUTIONS

1. This product has a powerful chlorine odor. Hold away from face when opening to avoid breathing fumes.
2. Prolonged contact between this product in its undissolved state and vinyl liners or painted surfaces, will result in bleaching of the vinyl or paint. Introduce this product through the skimmer or in a prescribed manner to avoid discoloration of liner or paint.
3. When adding this product to skimmer or feeder make sure there are no other chemicals present as a violent reaction may occur. It is always dangerous to mix chemicals.
4. Use this product as directed as per instructions. Do not take advice from others or experiment by yourself.
5. If this product is used to shock or superchlorinate a pool, after treatment it is important to brush walls and floor to expose algae that may be in cracks or wrinkles that might protect algae from high chlorine residual. Such protected algae will begin to reproduce again when high chlorine residual falls.
6. This product, because of its potent formulation, can be dangerous if not used properly. Do not mix with any other chemicals. This could result in a violent chemical reaction. Do not add water to this product in a closed container. Do not add this product to a small amount of water in a pail when adding this product to skimmer make sure pump is on and water is circulating so that material is drawn into recirculation system. Do not allow buildup of dry material in skimmer as gases generated may cause an explosion.

### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

When starting up a new pool, superchlorinate to satisfy chlorine demand and to establish a chlorine residual of 1.5 ppm to 2.0 ppm available chlorine. Add 1 1/2 ounces of this product per 1,000 gallons which provide 6.7 to 10 ppm available chlorine. Test with a reliable chlorine test kit. Bathers should not be allowed to enter the pool until the chlorine residual has dropped to 3 ppm or less. The next morning, add conditioner and stabilizer (cyanuric acid), according to the directions on the label to stabilize the pool.

Granular-90 should be added daily or as needed at the rate of 1/4 to 1/2 ounce per 1,000 gallons of pool water to maintain a chlorine residual at all times of 1.5 ppm to 2.0 ppm as determined by a suitable test kit. The pH should be maintained between 7.2 and 7.6. Proper dosage should be broadcast over deep end of pool or added through the skimmer slowly. Do not mix in a pail. A shock treatment should be made every week during hot weather or after heavy rains. Less frequent shock treatments may be made during cool weather. For the shock treatment, add 1 1/2 ounces of Granular-90 per 1,000 gallons of pool water which will provide 10 ppm available chlorine. Swimmers should not be permitted in the pool after the shock treatment until the chlorine residual falls to 3 ppm or less. Keep in mind that slight flexibility must be maintained in the event of heavy accumulations of dust and dirt caused by storms or super heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.5 ppm and 2.0 ppm.

### STORAGE AND DISPOSAL

Keep product dry in tightly closed container when not in use. Store in a cool, dry, well ventilated area away from heat or open flame. Do not contaminate food or feed by storage or disposal. Keep container and container dry and off wet floors. In case of decomposition that slight flexibility must be maintained in the event of heavy accumulations of dust and dirt caused by storms or super heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.5 ppm and 2.0 ppm.

This pesticide is toxic to fish. Treated effluent should not be discharged where it will drain into lakes, streams, ponds, or public water. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.
