punch out next higher number. If level is above 3 ppm, cover highest hole with water proof tape. Make additional adjustments as required to maintain a 1-3 ppm chlorine residual.

NOTE: Re-entry into treated swimming pool is prohibited above levels of 3.0 ppm of chlorine due to risk of bodily injury.

#### **FOR USE IN DUAL CHAMBER FEEDER**

##### **TO START CONTINUOUS CHLORINATION:**

1. With recirculating system off, grip canister by handle and insert into feeder chamber in an upside down position.
2. Push container down into the chamber with enough thrust to allow it to be pierced by the sharp puncture pieces in the bottom and side of the chamber.
3. Replace lid and tighten knobs to secure seal. Note: If canister has been inserted in an incorrect position, lid will not seal. Set output control to 50% and start recirculation system.
4. Continuous chlorination through pool recirculation system takes place only when pump is on. Run recirculation system each day sufficient hours to maintain adequate chlorine levels and clear water.

##### **TO ADJUST CONTINUOUS CHLORINATION**

1. Test pool water regularly for pH and free chlorine. If chlorine residual is less than 1.5 ppm, adjust output control to HIGHER % selection as necessary to maintain 1.5 to 2.5 ppm. If chlorine residual is more than 2.5 ppm, adjust OUTPUT CONTROLLER to LOWER chlorine level.
2. Re-test chlorine residual 24 hours after any adjustment.
3. Periodically check tablet level in canister through viewing window on side of feeder. Insert new canister when old one is almost empty. DO NOT REUSE container. DESTROY WHEN EMPTY.

PERIODIC SHOCK TREATMENT: A shock treatment should be made every week during hot weather or after heavy rain. Less

frequent shock treatments may be made during cool weather. For the shock treatments, add a fast dissolving chlorine according to the label directions for that product.

NOTE: Re-entry into treated swimming pool is prohibited above levels of 3.0 ppm of chlorine due to risk of bodily injury.
