DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This label must be in the possession of the user at the time of application.

For use on cotton stubble: For control of many annual broadleaf species, apply Five Star at the rate of 6.4 to 12.8 fluid ounces per acre. To aid in suppressing certain perennial or biennial broadleaf weeds (including cotton regrowth), Five Star may be applied at the rate of 12.8 to 25.6 fluid ounces per acre either alone or in combination with other registered herbicides such as dicamba. Use the higher rate on older plants, drought stressed plants or for hard-to-kill species. Follow more restrictive limitations, if any, for tank mix products used.

Do not graze dairy animals on treated areas within 7 days after application. Do not graze meat animals on treated areas within 3 days before slaughter. Do not cut treated grass for hay within 30 days of application.

Within 29 days following an application of this product, plant only those crops named as use sites on the Five Star label or other registered 2,4-D labels. Follow more specific limitations, if any, provided in the directions for individual crops. Labeled crops may be at risk for crop injury or loss when planted soon after application, especially in the first 14 days. All other crops may be planted 30 or more days following an application without concern for illegal residues in the planted crop. However, under certain conditions, there may be risk of injury to susceptible crops.

See the "GENERAL INFORMATION", "MIXING INSTRUCTIONS" and "PLANTING IN TREATED AREAS" sections of the label for Five Star for essential product information.

Read the "WARRANTY LIMITATIONS AND DISCLAIMER" in the label for Five Star before using. These terms apply to this supplemental labeling and if these terms are not acceptable, return the product unopened at once.
