**OFFICE OF CHEMICAL SAFETY  
AND POLLUTION PREVENTION**

August 17, 2023

Blake Cowen  
Product Registration Manager  
Albaugh, LLC  
1525 NE 36<sup>th</sup> Street  
Ankeny, IA 50021

Subject: Notification per PRN 98-10 – Update hotline number, referral statement, producer address, and add marketing graphic  
Product Name: BROX-M ADVANCED  
EPA Registration Number: 42750-103  
Application Date: April 4, 2023  
Decision Number: 591799

Dear Blake Cowen:

The Agency is in receipt of your Application for Pesticide Notification under Pesticide Registration Notice (PRN) 98-10 for the above referenced product. The Registration Division (RD) has conducted a review of this request for its applicability under PRN 98-10 and finds that the action requested falls within the scope of PRN 98-10. The label submitted with the application has been stamped “NOTIFICATION” and placed in our records

Should you wish to add/retain a reference to the company’s website on your label, then please be aware that the website becomes labeling under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) lists examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product’s label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA’s Office of Enforcement and Compliance.

If you have any questions, please contact Derek Corbin at 202-566-2571 or at [Corbin.Derek@epa.gov](mailto:Corbin.Derek@epa.gov).

Decision No. 591799

Sincerely,

 FoR

Mindy Ondish  
Product Manager 23  
Herbicide Branch  
Registration Division (7505P)  
Office of Pesticide Programs

**NOTIFICATION**

42750-103

The applicant has certified that no changes, other than those reported to the Agency have been made to the labeling. The Agency acknowledges this notification by letter dated:

08/17/2023

MCPA	GROUP	4	HERBICIDE
BROMOXYNIL	GROUP	6	HERBICIDE

**BROX-M™ ADVANCED  
Herbicide**

FOR CONTROL OF CERTAIN BROADLEAF WEEDS IN SMALL GRAINS  
(WHEAT, BARLEY, OATS AND RYE) FLAX AND GRASS GROWN FOR SOD

**ACTIVE INGREDIENTS:**

2-Ethylhexyl ester of 2-methyl-chlorophenoxyacetic acid*	40.0%
Octanoic acid ester of bromoxynil**(3,5-dibromo-4-hydroxybenzotrile)	36.8%
OTHER INGREDIENTS***	23.2%
<b>TOTAL:</b>	<b>100.0%</b>

\*Equivalent to or not less than 2.5 pounds MCPA acid per gallon.

\*\*Equivalent to or not less than 2.5 pounds bromoxynil per gallon.

\*\*\* Contains petroleum distillates.

**KEEP OUT OF REACH OF CHILDREN**

**WARNING/AVISO**

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you **DO NOT** understand the label, find someone to explain it to you in detail.)

**FIRST AID**

IF SWALLOWED:	<ul style="list-style-type: none"> <li>Immediately call a poison control center or doctor.</li> <li><b>DO NOT</b> induce vomiting unless told to by a poison control center or doctor.</li> <li><b>DO NOT</b> give any liquid to the person.</li> <li><b>DO NOT</b> give anything by mouth to an unconscious person.</li> </ul>
IF IN EYES:	<ul style="list-style-type: none"> <li>Hold eye open and rinse slowly and gently with water for 15-20 minutes.</li> <li>Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye</li> <li>Call a poison control center or doctor for treatment advice.</li> </ul>
IF ON SKIN OR CLOTHING:	<ul style="list-style-type: none"> <li>Take off contaminated clothing.</li> <li>Rinse skin immediately with plenty of water for 15-20 minutes.</li> <li>Call a poison control center or doctor for treatment advice.</li> </ul>
IF INHALED:	<ul style="list-style-type: none"> <li>Move person to fresh air.</li> <li>If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.</li> <li>Call a poison control center or doctor for further treatment advice.</li> </ul>

**HOT LINE NUMBER**

Have the product container or label with you when calling a poison control center or doctor or going for treatment. For non-emergency exposure information on this product, call 1-888-347-6732 (7 days/week, 24-hr). For medical emergencies, dial 911. Have the product container or label with you when calling a poison control center (888-347-

**NOTE TO PHYSICIAN**

May pose an aspiration pneumonia hazard. Contains petroleum distillate.

[See [inside] booklet for [additional][complete] [First Aid,] [Precautionary Statements,] [Directions for Use,] and [Storage and Disposal] [and] [Conditions of Sale and Warranty].]

For 24-hour chemical spill, leak, fire, exposure or accident response information, call CHEMTREC toll free at 1-800-424-9300.

## PRECAUTIONARY STATEMENTS

### HAZARDS TO HUMANS AND DOMESTIC ANIMALS WARNING

May be fatal if swallowed. Causes moderate eye irritation. Avoid contact with eyes, skin or clothing.

### PERSONAL PROTECTIVE EQUIPMENT (PPE)

Mixers, loaders, applicators, flaggers and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical resistant gloves made of barrier laminate, butyl rubber ≥14 mils, nitrile rubber ≥14 mils, neoprene rubber ≥14 mils, polyvinyl chloride ≥14 mils or Viton ≥14 mils
- Shoes plus socks

Additional PPE requirements for mixers and loaders supporting aerial application to rangelands, pasture lands, or noncropland. These mixers/loaders also must wear:

- A chemical resistant apron, and
- A NIOSH approved particulate filtering respirator equipped with N, R, or P class filter media with NIOSH approval number prefix TC-84A. It is recommended that the respirator wearer be fit tested, and trained in the use, maintenance, and limitations of the respirator.

See engineering controls for additional requirements.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS. **IMPORTANT:** When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for “applicators and other handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. **DO NOT** reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

### ENGINEERING CONTROLS STATEMENT

Pilots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides [40 CFR 170.240(d)(6)]

Handlers must use closed mixing / loading systems during mixing / loading liquid for aerial applications to fallow land and high-acreage field crops including barley, flax, oats, pasture and rangeland grass, rye, triticale, wheat and grass grown for seed.

If you will handle a total of 60 gallons or more of this product per day, you must use a mechanical transfer system for all mixing and loading operations. If this product is packaged in a 30 gallon drum, you must use a mechanical transfer system which terminates in a drip-free hard coupling which may be used only with a spray or mix tank which has been fitted with a compatible coupling. If you do not presently own or have access to a mechanical transfer system with this type of coupling, contact your dealer for information on how to obtain such a system or to modify your present system. When using a mechanical transfer system, do not remove or disconnect the pump or probe from the container until the container has been emptied and rinsed. The pump or probe system must be used to rinse the empty container and to transfer the rinsate directly to the mixing or spray tank.

Application from a tractor with a completely enclosed cab or aerial application is required whenever this product is applied to 360 or more acres in a day. The closed systems and enclosed cabs must be used in a manner that meets the

requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)]. The handler PPE requirements may be reduced or modified as specified in the WPS.

To reduce exposure to residues, wash the spray rig, tractor, and all other equipment used to handle or apply this product with water daily or before using the equipment for any other purpose.

Chemigation: Application by chemigation must be done by fixed pipe, overhead sprinkler systems or hand moved pipe. If hand moved pipe is used for chemigation, the pipe must not be handled in any way until 24 hours after chemigation has been completed and residues have been flushed from the system. When applying by chemigation, no person may enter the application site unless in an enclosed vehicle.

Aerial Application: Aerial application is prohibited within 300 feet of residential areas (e.g. homes, schools, playgrounds, shopping areas, hospitals, etc.)

**DO NOT** apply with backpack or hand-held application equipment.

Apply to non-residential turf only. **DO NOT** apply to residential, playground, or schoolyard turf.

### USER SAFETY RECOMMENDATIONS

Users should:

1. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.
2. Remove clothing/PPE immediately if pesticide gets inside. Wash thoroughly and put on clean clothing/PPE.
3. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

### ENVIRONMENTAL HAZARDS

**DO NOT** apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. **DO NOT** contaminate water when disposing of equipment washwaters or rinsate. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water.

This product is classified as having high potential for reaching surface water via runoff for several months or more after application.

A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of MCPA from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours.

This chemical has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

**NON-TARGET ORGANISM ADVISORY STATEMENT:** This product is toxic to plants and may adversely impact the forage and habitat of non-target organisms, including pollinators, in areas adjacent to the treated site. Protect the forage and habitat of non-target organisms by following label directions intended to minimize spray drift.

**NOTICE:** BROX-M ADVANCED contains low volatile ethyl hexyl ester of MCPA. At high air or ground surface temperatures, vapors from this product may cause injury to susceptible plants. This fact should be considered when applying BROX-M ADVANCED.

**REPORTING ECOLOGICAL INCIDENTS:** To report ecological incidents, including mortality, injury, or harm to plants and animals, call 1-800-247-8013.

## PHYSICAL AND CHEMICAL HAZARDS

Combustible. **DO NOT** use or store near heat or open flame.

## DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read entire label before using this product.

**ENDANGERED SPECIES PROTECTION REQUIREMENTS:** It is a Federal offense to use any pesticide in a manner that results in an unauthorized "take" (e.g., kill or otherwise harm) of an endangered species and certain threatened species, under the Endangered Species Act section 9. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the area in which you are applying the product. You must obtain a Bulletin no earlier than six months before using this product. To obtain Bulletins, consult <http://www.epa.gov/espp/>, call 1-844-447-3813, or email [ESPP@epa.gov](mailto:ESPP@epa.gov). You must use the Bulletin valid for the month in which you will apply the product.

**DO NOT** apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**DO NOT** apply this product to golf course turf.

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

**DO NOT** enter or allow worker entry into treated crops during the restricted entry interval (REI). For all crops except sod farm turf, the REI is 24 hours. **DO NOT** enter or allow worker entry into the treated areas during the restricted-entry interval (REI) of 24 hours for sod.

The REI for harvesting sod farm turf is 26 days. For uses on turf grown for transplanting (e.g. on sod farms), notify workers of the application by warning them orally and by posting signs at entrances to treated areas.

For early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

1. Coveralls over long-sleeved shirt and long pants
2. Shoes plus socks and
3. Protective eyewear.
4. Chemical resistant gloves made of barrier laminate, butyl rubber  $\geq 14$  mils, nitrile rubber  $\geq 14$  mils, neoprene rubber  $\geq 14$  mils, polyvinyl chloride  $\geq 14$  mils or Viton  $\geq 14$  mils

### STORAGE AND DISPOSAL

**DO NOT** contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Store at temperatures above 40° F and below 100° F. If allowed to freeze, remix before using.

**PESTICIDE DISPOSAL:** Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**CONTAINER DISPOSAL:** Non-refillable containers (1, 2.5, 30 & 55 gallon): **DO NOT** reuse or refill this container.

Offer for recycling, if available. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

(non-refillable <5 gallons) Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

(non refillable >5 gallons) Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows (all sizes): Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle inside of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Refillable container (250 gallon & bulk): Refill this container with pesticide only. **DO NOT** reuse this container for any other purpose.

Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

To clean the container before final disposal, empty the remaining contents from the container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing process two more times.

## PRODUCT INFORMATION

BROX-M ADVANCED is formulated as an emulsifiable concentrate containing the equivalent of 2.5 lbs. per gallon of octanoic acid ester of bromoxynil and 2.5 lbs. per gallon of 2-ethylhexyl ester of MCPA.

BROX-M ADVANCED is a selective postemergence herbicide for control of important broadleaf weeds infesting wheat, barley, oats, rye, flax and grass grown for sod. Optimum weed control is obtained when BROX-M ADVANCED is applied to actively growing weed seedlings. BROX-M ADVANCED is primarily a contact herbicide, therefore thorough coverage of the weed seedlings is essential for optimum control.

BROX-M ADVANCED has little residual activity. Therefore, subsequent flushes of weeds will not be controlled by the initial treatment. Generally, crops that form a good canopy will help shade subsequent weed flushes.

Occasional transitory leaf burn may occur. The temporary leaf burn is similar to that seen with liquid fertilizer. Because the activity of BROX-M ADVANCED is mainly contact, recovery of the crop is generally rapid with no lasting effect. Frequency and amount of leaf burn may be greater when crops are stressed by abrasive winds, cool to cold evening temperatures or mechanical injury, such as that caused by hail, sleet or insect feeding. To reduce the potential for temporary leaf burn, applications should be made to dry foliage in the recommended spray volumes per acre when weather conditions are not extreme.

## WEED RESISTANCE MANAGEMENT

For resistance management, please note that this product contains both a Group 4 (MCPA) and a Group 6 (Bromoxynil) herbicide. Any weed population may contain plants naturally resistant to Group 15 and/or Group 5 herbicides. The resistant individuals may dominate the weed population if these herbicides are used repeatedly in the same fields. Appropriate resistance-management strategies should be followed.

To delay herbicide resistance, take one or more of the following steps:

- Rotate the use of this product or other Group 4 and/or Group 6 herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.
- Use tank mixtures from a different group if such use is permitted; where information on resistance in target weed species is available, use the less resistance-prone partner at a rate that will control the target weed(s) equally as well as the more resistance-prone partner. Consult your local extension service or certified crop advisor if you are unsure as to which active ingredient is currently less prone to resistance.
- Adopt an integrated weed-management program for herbicide use that includes scouting and uses historical information related to herbicide use and crop rotation, and that considers tillage (or other mechanical control methods), cultural (e.g., higher crop seeding rates; precision fertilizer application method and timing to favor the crop and not the weeds), biological (weed-competitive crops or varieties) and other management practices.
- Fields should be scouted prior to application to identify the weed species present and their growth stage to determine if the intended application will be effective. Fields should be scouted after application to verify that the treatment was effective.
- Scout after herbicide application to monitor weed populations for early signs of resistance development. Indicators of possible herbicide-resistance include: 1) Failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds; 2) a spreading patch of non-controlled plants of a particular weed species; 3) surviving plants mixed with controlled individuals of the same species. If resistance is suspected, prevent weed seed production in the affected area by an alternative herbicide from a different group or by a mechanical method such as hoeing or tillage. Prevent movement of resistant weed seeds to other fields by cleaning harvesting and tillage equipment when moving between fields, and planting clean seed.
- If a weed pest population continues to progress after treatment with this product, discontinue use of this product, and switch to another management strategy or herbicide with a different mode of action, if available.
- Contact your local extension specialist or certified crop advisors for additional pesticide resistance management and/or integrated weed-management recommendations for specific crops and weed biotypes.

Additional Best Management Practices include:

- Plant into weed-free fields and keep fields as weed-free as possible.
- Fields with difficult to control weeds should be rotated to crops that allow the use of herbicides with alternative mechanisms of action or different management practices.
- To the extent possible **DO NOT** allow weed escapes to produce seeds, roots or tubers. Manage weed seeds at harvest and postharvest to prevent a buildup of the weed seed-bank.
- Prevent field-to-field and within-field movement of weed seed or vegetative propagules. Thoroughly clean plant residues from equipment before leaving fields.
- Prevent an influx of weeds into the field by managing field borders.
- Identify weeds present in the field through scouting and field history and understand their biology. The weed control program should consider all of the weeds present.
- Difficult to control weeds may require sequential applications of herbicides with differing mechanisms of action.
- Apply this herbicide at the correct timing and rate needed to control the most difficult weed in the field.
- Use a broad-spectrum soil-applied herbicide with a mechanism of action that differs from this product as a foundation in a weed-control program. **DO NOT** use more than two applications of this or any other herbicide with the same mechanism of action within a single growing season unless mixed with an herbicide with another mechanism of action with an overlapping spectrum for the difficult-to-control weeds.
- If resistance is suspected, treat weed escapes with an herbicide with a different MOA or use non-chemical methods to remove escapes.

Report any incidence of non-performance of this product against a particular weed species to your Albaugh, LLC retailer, representative. If resistance is suspected, treat weed escapes with an herbicide having a different mechanism of action and/or use non-chemicals means to remove escapes, as practical, with the goal of preventing further seed production.

Contact your local sales representative, crop advisor, or extension agent to find out if suspected resistant weeds to these MOAs have been found in your region. **DO NOT** assume that each listed weed is being controlled by multiple mechanisms of action. Co-formulated active ingredients are intended to broaden the spectrum of weeds that are controlled. Some weeds may be controlled by only one of the active ingredients in this product.

## MIXING, LOADING AND HANDLING INSTRUCTIONS

## 2.5 Gallon Containers

Special care must be taken in mixing and loading this product. Hands should be placed on the container in such a way as to avoid possible drip or splash. Contact your local Albaugh representative if you have questions regarding the correct procedure for mixing and loading.

## Bulk Containers

If you will handle a total of 48 gallons or more of this product per day, you must use a mechanical transfer system for all mixing and loading operations. If this product is packaged in a 30 gallon drum, you must use a mechanical transfer system which terminates in a drip-free hard coupling which may be used only with a spray or mix tank which has been fitted with a compatible coupling. If you **DO NOT** presently own or have access to a mechanical transfer system with this type of coupling, contact your dealer for information on how to obtain such a system or to modify your present system. When using a mechanical transfer system, **DO NOT** remove or disconnect the pump or probe from the container until the container has been emptied and rinsed. The pump or probe system must be used to rinse the empty container and to transfer the rinsate directly to the mixing or spray tank.

**BROX-M ADVANCED ALONE:** Fill the spray tank 1/2 to 3/4 full with clean water. Begin agitation and add the specified amount of **BROX-M ADVANCED**. Add water to the spray tank to the desired level. Maintain sufficient agitation to ensure a uniform spray mixture during application.

## TANK MIXTURES

**BROX-M ADVANCED** may be tank-mixed with other pesticide products provided that these products are registered for use on the crop/use site to be treated. The tank mix must be used in accordance with the more restrictive pesticide label limitations and precautions. No label dosage rates may be exceeded. **BROX-M ADVANCED** cannot be mixed with any product containing a label prohibition against such mixing.

**BROX-M ADVANCED** can be applied in tank mixture with many other herbicides and insecticides registered for use on approved crops. Refer to the specific crop section for rate recommendations and other restrictions. To apply **BROX-M ADVANCED** in mixture with another product, fill the spray tank 1/2 to 3/4 full with clean water and begin agitation. If tank mixing with wettable powder, soluble powder, flowable or dry flowable products, add the powder or flowable product first. After the other herbicide is thoroughly mixed with water add the recommended amount of **BROX-M ADVANCED** and add water to the spray tank to the desired level. If tank mixing with other product types, add the **BROX-M ADVANCED** first before adding the other product. Always mix one product in water thoroughly before adding another product or compatibility problems may occur.

Maintain sufficient agitation while mixing and during application to ensure a uniform spray mixture. If spray mixture is allowed to remain without agitation for short periods of time, be sure to agitate until uniformly mixed before application.

If tank mixing with products other than those listed within each crop section, a compatibility test should be done to ensure satisfactory spray preparation. To test for compatibility, use a small container and mix a small amount (0.5 to 1 quart) of spray, combining all ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, **DO NOT** use this mixture for spraying. Indications of incompatibility usually will appear within 5 to 15 minutes after mixing. To ensure maximum crop safety and weed control, follow all cautions and limitations on this label and the labels of products used in the tank mixture with **BROX-M ADVANCED**.

## SPRAYABLE LIQUID FERTILIZERS AND SPRAY ADDITIVES

**BROX-M ADVANCED** can be applied in combination with sprayable liquid fertilizer or spray additives such as surfactants or crop oil concentrate. When tank mixing with liquid fertilizer always add the fertilizer to the spray tank first and agitate thoroughly before adding **BROX-M ADVANCED**. Always predetermine the compatibility with liquid fertilizer by mixing small proportional quantities in advance. Agitation must be maintained during filling and application operations to ensure that **BROX-M ADVANCED** is evenly mixed with the fertilizer. Leaf burn may occur when **BROX-M ADVANCED** is applied

with liquid fertilizer, but new leaves are not adversely affected.

NOTICE: Fertilizers and spray additives can increase foliage leaf burn when applied with BROX-M ADVANCED. **DO NOT** apply fertilizers or spray additives with this product if leaf burn is a major concern due to environmental conditions, crop or variety sensitivity to BROX-M ADVANCED. If BROX-M ADVANCED is mixed with liquid fertilizer, the fertilizer should compose no more than 1/2 the total spray mix.

## APPLICATION PROCEDURES

BROX-M ADVANCED can be applied to registered use areas by ground, aerial and sprinkler irrigation equipment.

### MANDATORY SPRAY DRIFT MANAGEMENT

#### Aerial Application

- **DO NOT** release spray at a height greater than 10 ft. above the ground or vegetative canopy, unless a greater application height is necessary for pilot safety.
- Applicators must use 1/2 swath displacement upwind at the downwind edge of the field.
- **DO NOT** apply when wind speeds exceed 10 miles per hour at the application site.
- Applicators are required to use a medium or coarser droplet size (ASABE S572 and S641).
- The distance of the outer most nozzles on the boom must not exceed 75% of the length of the wingspan or 90% of the rotor diameter.
- **DO NOT** apply during temperature inversion.

#### Ground Application

- User must only apply with the release height recommended by the manufacturer, but no more than 4 feet above the ground or crop canopy.
- **DO NOT** apply when wind speeds exceed 10 miles per hour at the application site.
- Applicators are required to select the nozzle and pressure that deliver a medium or coarser droplet size (ASABE S572).
- **DO NOT** apply during temperature inversions.

#### Boomless Ground Application

- Applicators are required to select the nozzle and pressure that deliver a medium or coarser droplet size (ASABE S572) for all applications.
- **DO NOT** apply when wind speeds exceed 10 miles per hour at the application site.
- **DO NOT** apply during temperature inversions.

## SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT. BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

### IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

#### Controlling Droplet Size- Ground Boom

- Volume- Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- Pressure- Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
- Spray nozzle- Use a spray nozzle that is designated for the intended application. Consider using nozzles designed to reduce drift.

#### Controlling Droplet Size- Aircraft

- Adjust nozzles- Follow nozzle manufacturers recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.

### **BOOM HEIGHT- Ground Boom**

For ground equipment, the boom should remain level with the crop and have minimal bounce.

### **RELEASE HEIGHT- Aircraft**

Higher release heights increase the potential for spray drift

### **SHIELDED SPRAYERS**

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

### **TEMPERATURE AND HUMIDITY**

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

### **TEMPERATURE INVERSIONS**

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

### **WIND**

Drift potential generally increases with wind speed. **AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS.** Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

### **Boomless Ground Applications**

Setting nozzles at the lowest effective height will help to reduce the potential for spray drift.

### **Handheld Technology Applications**

Take precautions to minimize spray drift.

## **GROUND APPLICATION**

Select a spray volume and delivery system that will ensure thorough and uniform spray coverage. For optimum spray distribution and thorough coverage use of flat fan nozzles (maximum tip size 8008) with a spray pressure of 40-60 psi are recommended. Other nozzle types and lower spray pressures that produce coarse spray droplets may not provide adequate coverage of the weeds to ensure optimum control. Raindrop® nozzles and flood nozzles are not recommended as weed control with BROX-M ADVANCED may be reduced. A spray volume of 10 to 20 gallons per acre (GPA) is recommended for optimum spray coverage. A minimum of 5 GPA with a minimum spray pressure of 50 psi and a maximum ground speed of 10 mph may be used with higher speed, low volume ground application if ground terrain, crop and weed density allow effective spray distribution. When using higher speed equipment, a maximum ground speed of 10 mph is suggested if field conditions cause excessive boom movement during application which results in poor spray coverage. Ground applications made when dry, dusty field conditions exist may provide reduced weed control in wheel track areas. Applications using less than 10 gallons per acre may result in reduced weed control.

When weed infestations are heavy, use of higher spray volumes and spray pressures will be helpful in obtaining uniform weed coverage. If you are unsure of the infestation level or size of crop, consult your local agronomist or extension service.

**DO NOT** apply when winds are gusty or when other conditions favor poor spray coverage and/or off target spray movement.

## **AERIAL APPLICATION**

Use orifice discs, cores and nozzle types and arrangements that will provide for optimum spray distribution and maximum coverage. Use a minimum spray volume of 5 GPA and a maximum pressure of 40 psi. A minimum spray volume of 3 gallons per acre may be used if crop canopy and weed density allow adequate spray coverage. Aerial applications using less than 5 gallons of spray volume per acre may result in reduced weed control.

**DO NOT** apply during inversion conditions, when winds are gusty or when other conditions favor poor spray coverage and/or off target spray movement. Off target spray movement can be minimized by increasing the spray volume per

acre and not applying when winds exceed 10 mph.

### **AERIAL APPLICATION USE RESTRICTIONS**

Aerial application to fallow land is restricted within 25 feet of residential areas (e.g. homes, schools, playgrounds, shopping areas, hospitals, etc).

### **SPRINKLER IRRIGATION APPLICATION**

BROX-M ADVANCED can be applied through sprinkler irrigation systems to wheat, barley, oats, rye and grasses grown for sod.

Apply BROX-M ADVANCED through sprinkler systems including center pivot, lateral move, side (wheel) roll, solid set or hand move irrigation systems only. If hand moved pipe is used for chemigation, the pipe must not be handled in any way until 24 hours after chemigation has been completed and residues have been flushed from the system. When applying by chemigation, no person may enter the application site unless in an enclosed vehicle. **DO NOT** apply this product through any other type of irrigation system.

#### **SPECIFIC REQUIREMENTS FOR APPLICATION THROUGH AUTOMATED SPRINKLER IRRIGATION SYSTEM**

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. **DO NOT** apply when wind speed favors drift beyond the area intended for treatment.
8. Agitation should be maintained in the pesticide supply tank when applying.
9. BROX-M ADVANCED should be applied continuously for the duration of the water application with center pivot and continuous lateral move systems. Application of BROX-M ADVANCED should be made during the last 30-45 minutes of the irrigation set with other overhead sprinkler systems.
10. For best performance, set the sprinkler system to deliver approximately 0.5 inch or less of water per acre.
11. Remove scale, pesticide residues and other foreign matter from the supply tank and entire injector system. Flush with clean water.
12. If BROX-M ADVANCED is diluted in the supply tank, fill the tank with half of the water amount desired, add the BROX-M ADVANCED and then add remaining water amount with agitation. Always dilute with at least 4 parts water to 1 part BROX-M ADVANCED.
13. Start the sprinklers and then inject BROX-M ADVANCED into the irrigation line. BROX-M ADVANCED should be injected with a positive displacement pump into the main line at least 8 feet ahead of a right angle turn to insure adequate mixing. Refer to the BROX-M ADVANCED label for detailed information on application rates and timings.

### **CHEMIGATION USE RESTRICTIONS AND PRECAUTIONS**

- Application of more than 0.5 inch/acre of irrigation water may result in decreased product performance on certain soils.
- **DO NOT** apply when conditions favor drift, when system connections or fittings leak, or when nozzles **DO NOT** provide uniform distribution.
- Allow sufficient time for pesticide to be flushed through all the lines and nozzles before turning off irrigation water.
- Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
- **DO NOT** connect an irrigation system used for pesticide application to a public water system.
- If you have questions about calibration, you should contact State Extension Service specialists, equipment

- manufacturers or other experts.
- A person knowledgeable of the chemigation system and responsible for its operations, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

### LIST OF WEEDS CONTROLLED

Postemergence application of BROX-M ADVANCED will control the following weeds when sprayed in the seedling stage. Maximum weed stage of growth is listed under BROX-M ADVANCED directions.

#### MOST SUSCEPTIBLE BROADLEAF WEED SPECIES

Annual sowthistle ( <i>Sonchus oleraceus</i> )	Lanceleaf sage ( <i>Salvia reflexa</i> )
Black mustard ( <i>Brassica nigra</i> )	London rocket ( <i>Sisymbrium irio</i> )
Black nightshade ( <i>Solanum nigrum</i> )	Marshelder ( <i>Iva xanthifolia</i> )
Common cocklebur ( <i>Xanthium strumarium</i> )	Pennsylvania smartweed ( <i>Polygonum strumarium</i> )
Common lambsquarter ( <i>Chenopodium album</i> )	Pepperweed spp. ( <i>Lepidium spp.</i> )
Common tarweed ( <i>Hemizonia Congesta</i> )	Red root pigweed ( <i>Amaranthus retroflexus</i> )
Cow cockle ( <i>Saponaria vaccaria</i> )	Russian thistle ( <i>Salsola kali</i> )
Cutleaf nightshade ( <i>Solanum triflorum</i> )	Shepherdspurse ( <i>Capsella bursa-pastoris</i> )
Eastern Black Nightshade ( <i>Solanum ptycanthum</i> )	Silverleaf nightshade ( <i>Solanum elaeagnifolium</i> )
Coast fiddleneck ( <i>Amsinckia intermedia</i> )	Sunflower ( <i>Helianthus annuus</i> ) <sup>1</sup>
Field pennycress ( <i>Thlaspi arvense</i> )	Tall Waterhemp ( <i>Amaranthus tubersulatus</i> )
Green smartweed ( <i>Polygonum scabrum</i> )	Tartary buckwheat ( <i>Fagopyrum tataricum</i> )
Hairy nightshade ( <i>Solanum sarachoides</i> )	Tumble mustard ( <i>Sisymbrium altissimum</i> )
Horned Poppy ( <i>Glaucium corniculatum</i> )	Wild buckwheat ( <i>Polygonum convolvulus</i> )
Jimsonweed ( <i>Datura stramonium</i> )	Wild mustard ( <i>Sinapsis arvensis</i> )
Ladysthumb ( <i>Polygonum persicaria</i> )	Yellow rocket ( <i>Barbarea vulgaris</i> )

<sup>1</sup>For control of sunflower, delay application until first sunflower seedlings emerging are 4 inches in height.

#### SUSCEPTIBLE BROADLEAF WEED SPECIES<sup>1</sup>

Blue (purple) mustard ( <i>Chlorispora tenella</i> )	Mayweed ( <i>Anthemis cotula</i> )
Common groundsel ( <i>Senecio vulgaris</i> )	Prostrate knotweed ( <i>Polygonum aviculare</i> )
Common ragweed ( <i>Ambrosia artemisiifolia</i> )	Puncture vine ( <i>Tribulus terrestris</i> )
Corn chamomile ( <i>Anthemis arvensis</i> )	Redroot pigweed ( <i>Amaranthus retroflexus</i> )
Corn gromwell ( <i>Lithospermum arvense</i> )	Smooth pigweed ( <i>Amaranthus hybridus</i> )
Fumitory ( <i>Fumaria officinalis</i> )	Spiny pigweed ( <i>Amaranthus spinosus</i> )
Giant ragweed ( <i>Ambrosia trifida</i> )	Tall morningglory ( <i>Ipomoea purpurea</i> )
Hemp sesbania ( <i>Sesbania exaltata</i> )	Tansy mustard ( <i>Descurainia pinnata</i> )
Henbit ( <i>Lamium amplexicaule</i> )	Tarweed ( <i>Hemizonia spp.</i> )
Ivyleaf morningglory ( <i>Ipomoea hederacea</i> )	Velvetleaf ( <i>Abutilon theophrasti</i> )
Knawel ( <i>Scleranthus annuus</i> )	Wild radish ( <i>Raphanus raphanistrum</i> )
Kochia ( <i>Kochia scoparia</i> )	

<sup>1</sup>Weeds germinating after spraying will not be controlled.

### WEED SUPPRESSION

Canada Thistle (*Cirsium arvense*)

BROX-M ADVANCED applied at 1 1/2 pints per acre provides burn down of top growth. Regrowth may occur. Make applications when Canada thistle is 8 inches tall to the bud stage. Refer to the tank mix directions on this label for optimum suppression options.

### PLANT BACK INTERVAL

Wheat, barley, oats, rye, flax and peas treated with MCPA may be replanted with any crop specified on an MCPA label or any crop for which a residue tolerance exists for MCPA. For crops not listed on an MCPA label, or on crops for which no residue tolerances for MCPA have been established, a 1-year

plantback interval must be observed.

ADVANCED + Sulfosulfuron (0.75 lbs AI per pound product)	1 3/5  +	25.6		partner label for proper rates, crops, adjuvants, rotation restrictions and application timing information.	broadleaf weeds plus grasses as listed on the Maverick label.

Precautions: Wheat, Barley, Oats and Rye

- Reduced weed control may occur when weeds are stressed from lack of moisture or cold temperatures.
- Refer to labels of products used in tank mixture for additional restrictions and precautions.

Restrictions: Wheat, Barley, Oats and Rye

- **DO NOT** graze treated fields within 45 days after application.
- **DO NOT** apply more than 1.6 pints of BROX-M ADVANCED (0.5 lbs bromoxynil / 0.5 lbs MCPA ae) per year.
- **DO NOT** plant rotational crops within 30 days following Brox-M application. Wheat, barley, oats and rye treated with MCPA may be replanted with any crop specified on an MCPA label or any crop for which a residue tolerance exists for MCPA. For crops not listed on an MCPA label, or on crops for which no residue tolerances for MCPA have been established, a 1-year plantback interval must be observed.
- **DO NOT** apply more than 0.75 lbs. of MCPA acid equivalent per year (2.4 pints of BROX-M ADVANCED) when tank mixing with products that contain MCPA.

**GRASSES GROWN FOR SOD PRODUCTION**  
**BROX-M ADVANCED DIRECTIONS**  
Seedling and Established Grasses

PRODUCT	RATE Per ACRE	RATE Per 1000 SQ.FT.	APPLICATION TIMING AND SPECIFIC COMMENTS	
			CROP	WEEDS
BROX-M ADVANCED	4/5 - 1 3/5 Pints	0.3 to 0.6 Fl. Oz.	Apply to established and newly seeded grasses grown for sod production before the boot stage. Established grasses tolerant to BROX-M ADVANCED include bentgrasses, Kentucky Bluegrass, Fescues, Ryegrass, Bermudagrass, St. Augustinegrass and Zoysiagrass. BROX-M ADVANCED may also be used on seedling grasses such as Merion, Park, Delta, or common Kentucky Bluegrasses, Pennlawn, Chewings, Illahee or Alta Fescues, Orchard grass, Highland, Seaside or Astoria Bentgrasses, perennial Ryegrasses, Bahiagrass and Zoysiagrass.	Refer to the GENERAL WEED LIST for a listing of susceptible broadleaf weeds. Optimal control will be attained when weeds are treated in the seedling stage (less than 4 leaf stage, 2 inches in height, or 1 inch in diameter).
BROX-M ADVANCED	Chemigation  1 3/5 pints/A only	0.6 Fl. Oz.	Apply to established and newly seeded grasses grown for sod production before the boot stage. Apply through automated sprinkler irrigation systems with mechanical transfer loading system only. See MIXING LOADING AND HANDLING INSTRUCTIONS section for complete details. Refer to the list of established grasses that are tolerant to BROX-M ADVANCED	

RESTRICTIONS: Grasses grown for sod production

- **DO NOT** allow livestock to graze in treated areas or feed treated grasses to livestock.
- **DO NOT** apply BROX-M ADVANCED to grasses grown for sod production with backpack or hand-held application equipment.
- **DO NOT** apply more than 1.6 pints (0.5 lbs.) of BROX-M ADVANCED per acre per year.
- **DO NOT** apply more than 2 applications per year with a minimum retreatment interval of 21 days.
- **DO NOT** apply more than 1.5 lbs. acid equivalent per acre per year (4.8 pints of BROX-M ADVANCED)

**FLAX (*Linum usitatissimum* only)  
BROX-M ADVANCEDD DIRECTIONS**

PRODUCT	BROX-M ADVANCEDD RATE			APPLICATION TIMING AND SPECIFIC COMMENTS	
	Pints/A	Fl. Oz/A	Acres/Gal	CROP	WEEDS
BROX-M ADVANCED	5/7	11.4	11.3	Apply to flax that is 2 to 8 inches in height. <b>DO NOT</b> apply to flax during or after the bud stage.	Apply to <b>MOST SUSCEPTIBLE</b> weeds that <b>DO NOT</b> exceed the 4 leaf stage, 2 inches in height or 1 inch in diameter, whichever comes first.

HIGHER SPRAY VOLUMES OF 15 TO 20 GALLONS PER ACRE WILL DECREASE POTENTIAL FOR FLAX INJURY.

**PRECAUTIONS:** Flax (*Linum usitatissimum* only)

- Unacceptable crop injury may occur following BROX-M ADVANCED application to flax grown on high organic, peat type soils.
- Application under high humidity conditions can injure flax.
- Unless otherwise instructed, **DO NOT** apply BROX-M ADVANCED to flax with crop oil concentrate, surfactants or nitrogen solutions.
- Flax treated with MCPA may be replanted with any crop specified on an MCPA label or any crop for which a residue tolerance exists for MCPA. For crops not listed on an MCPA label, or on crops for which no residue tolerances for MCPA have been established, a 1-year plantback interval must be observed.

**RESTRICTIONS:** Flax (*Linum usitatissimum* only)

- **DO NOT** apply if temperatures are expected to exceed 85° F at application or 3 days following application or crop injury may occur.
- **DO NOT** use on ornamental flax.
- **DO NOT** apply more than 0.72 pint of BROX-M ADVANCED per acre in a single growing season.
- **DO NOT** exceed .25 lbs acid equivalent per acre per year (0.8 pints BROX-M ADVANCED)

## WARRANTY LIMITATIONS AND DISCLAIMER

To the extent consistent with applicable law, all such risks shall be assumed by the buyer. Seller warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the DIRECTIONS FOR USE when used under normal conditions. THIS IS THE ONLY WARRANTY MADE ON THIS PRODUCT. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, NO OTHER EXPRESS AND NO IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE IS MADE OUTSIDE OF THIS LABEL. Therefore, neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, express or implied, extends to the use of this product contrary to label instructions (including conditions noted on the label, such as unfavorable temperatures, soil conditions, etc.), under abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes, etc.) or under conditions not reasonably foreseeable to or beyond the control of seller.

When buyer or user suffers losses or damages resulting from the use or handling of this product (including claims based on contract, negligence, strict liability, or other legal theories), buyer or user must promptly notify seller, in writing, of any claims to be eligible to receive either remedy given below. To the extent consistent with applicable law, the EXCLUSIVE REMEDY OF THE BUYER OR USER and the LIMIT OF LIABILITY of seller will be one of the following, at the election of the seller:

1. Refund of purchase price paid by buyer or user for product bought or
2. Replacement of amount of product used.

To the extent consistent with applicable law, the seller will not be liable for consequential or incidental damages or losses.

The terms of this Warranty Limitations and Disclaimer cannot be varied by any written or verbal statements or agreements. Any employee or sales agent of the seller is not authorized to vary or exceed the terms of this Warranty Limitations and Disclaimer in any manner.

All product names, trademarks, and registered trademarks are the property of their respective owners.
