**SPRAY DRIFT MANAGEMENT FOR AGRICULTURAL CROPS**

- Avoiding spray drift at the application site is the responsibility of the applicator and the grower. The interactions of many equipment and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.
- Do not apply at wind speeds greater than 10 mph at the application site.
- Do not make any type of application into temperature inversions.
- Apply as a medium or course spray ( ASABE standard 572).

**For aerial applications:**

- Do not release at a height greater than 10 feet above the ground or crop canopy.
- The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter.
- Aerial applicators must consider flight speed and nozzle orientation in determining droplet size.
- When applications are made with a cross-wind, the swath will be displaced downwind. The applicator must compensate for this displacement at the downwind edge of the application area by adjusting the past of the aircraft upwind.

**For ground applications:**

- Do not release spray at a height greater than 4 feet above the ground or crop canopy.

**For airblast applications:**

- Direct sprays into the canopy.
- Turn off outward pointing nozzles at row ends and when spraying outer rows.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is:

- coveralls,
- shoes plus socks, and
- chemical-resistant gloves made of any waterproof material.
