1. The first part of the paper is devoted to the study of the asymptotic behavior of the solutions of the system (1) as $t \rightarrow \infty$. It is shown that the solutions of the system (1) tend to zero as $t \rightarrow \infty$ if and only if the matrix A is stable.

It is important to note that the results of the present study are based on a cross-sectional design. Therefore, the causal relationship between the variables cannot be definitively established. Future research should employ longitudinal designs to investigate the temporal sequence of events and the potential mediating factors that influence the relationship between the variables.

1. The first step is to identify the problem. This involves understanding the current situation and the goals that need to be achieved.

Exposure to the UVB and infrared from
the treatment of the skin and the treatment of
the skin and the treatment of the skin

These data suggest that the observed increased risk of infection in the immunocompetent patients may be due to the increased exposure to the environment, rather than to the immunosuppression itself. The immunosuppression may have been a confounding factor in the study of the immunocompetent patients, but it is not clear whether the immunosuppression was a confounding factor in the study of the immunocompromised patients. The immunosuppression may have been a confounding factor in the study of the immunocompromised patients, but it is not clear whether the immunosuppression was a confounding factor in the study of the immunocompetent patients.

Note—The authors thank Dr. Robert J. Beaman, University of Illinois at Chicago, for his helpful comments on earlier drafts of this manuscript.

Notice

FLOWABLE CONCENTRATE

ACTIVE INGREDIENT *Bacillus thuringiensis* Berliner, var. *kurstaki*, primary powder fermentation product, potency of 8 800 International Units per milligram of product (equivalent to 35 billion International Units per gallon of product) 10%

INERT INGREDIENTS 90%

CAUTION: KEEP OUT OF REACH OF CHILDREN

BEST DOCUMENT AVAILABLE

Hazards to Humans: Avoid inhalation. Irritant to skin and eyes; open wounds.

Storage: 1. Place in a cool, dry place. 2. Do not store in airtight container. 3. Do not store in a plastic bag. 4. Do not store in a metal container. 5. Do not store in a glass container. 6. Do not store in a paper container. 7. Do not store in a cardboard container. 8. Do not store in a plastic bag. 9. Do not store in a metal container. 10. Do not store in a glass container. 11. Do not store in a paper container. 12. Do not store in a cardboard container.

Disposal: The waste is to be disposed of in accordance with the applicable regulations. The waste is to be disposed of in a secure manner and the disposal site is to be monitored for any leaks or spills. The waste is to be disposed of in a secure manner and the disposal site is to be monitored for any leaks or spills.
