BACTIMOS™  
MOSQUITO ATTACK RINGS

READY TO USE "RINGS"  
UP TO 30 DAY CONTROL

- . NATURAL CONTROL
- . EFFECTIVE
- . NO CHEMICALS

OCT 18 1964  
43382-19

Caution: Do not let children play with this product.

ACTIVE INGREDIENT: Bacillus thuringiensis Berliner var. israelensis,  
Serotype H-14, primary powder, 7000 Aedes aegypti (AA) ITU per  
milligram (dry weight basis)..... 5.0%  
INERT INGREDIENTS: .....95.0%

EPA Reg. No. 43382-  
EPA Est. No. 6218-MD-2

Net Wt. 2.2 oz.

Contains 5 Rings

NATURAL PEST CONTROL THAT WORKS

Bactimos Mosquito Attack Rings are a natural, effective control for mosquito larvae. Unlike certain chemical pesticides, this product is environmentally beneficial and has shown no harmful effects on people, pets or fish. It can be applied directly to lakes and ponds.

Bactimos Mosquito Attack Rings will control mosquito larvae in treated areas and keep on working for up to 30 days or more.

Mosquitoes breed anywhere standing or slow moving water exists, including ponds, gutters and wet spots in the yard.

This product is designed to float on top of water, where it then releases the active ingredient. Mosquito larvae feed on the active ingredient, become sick and die.

#### DIRECTIONS FOR USE:

The action of the floating Bactimos Mosquito Attack Rings will ensure that the active material is released at the surface and then gradually settle to the bottom.

These rings may be used in all types of mosquito breeding areas. To prevent rings from being flushed out of certain treatment areas, they can be anchored using string tied through the hole in the center or staked in place.

Rings can be applied to dry areas which are known to become breeding sites when flooded, such as drainage areas and low spots. The rings will float to the surface when flooding occurs and start releasing the active material. Alternate wetting and drying will not reduce their effectiveness.

#### APPLICATION RATES:

In standing water: Place or toss one (1) Bactimos Mosquito Attack Ring in the center of each 100 square feet of surface regardless of depth. When larval populations are high, aquatic vegetation dense, or the water highly polluted at the time of use, pre-treatment with Bactimos Flowable Concentrate or Wettable Powder is recommended. The ring will then suppress larval development for 30 days or more. Some larvae which hatch after ring application may partially develop before dying. Allow a minimum of 48 hours for their control.

Pre-flood treatment: Apply one (1) Bactimos Mosquito Attack Ring to each 100 square feet of dry bed surface which is a known or suspected breeding site when flooded.

#### STORAGE AND DISPOSAL:

Reclose container and store in a cool, dry place. Discard empty container according to local refuse regulations.

NOTICE: Biochem Products makes no warranty, express or implied, for any particular purpose concerning this material, other than those which are contained on this label.
