ONLY SEED OF HIGH GERMINATION with good vigor should be treated with Lindane. Poor seed may suffer greater injury. It is suggested that seed be treated not over six weeks before planting. What effect prolonged storage has on germination has not been definitely established. Treated seed should be stored in a dry place until planted so that excess moisture may evaporate. If seed is stacked when wet, heat may develop which impairs germination.

IF SOIL TEMPERATURE IS EXTREMELY HIGH due to hot weather, midsummer planting, or other reasons, reduce recommended dosage by one half. Where seed decay occurs due to soil organisms combine with a protective fungicide.
