DIRECTIONS

SOYBEANS AND BEANS: For control of seed-borne and soil-borne fungi which cause seed decay, damping-off, and seedling blights, use 5.75 ounces of this product per 100 lbs. of seed

This product contains dry lubricant to help lubricate the planter box and assure a smooth, even seed flow to the furrow, an effective binder to help hold the treatment on the seed during planting, and molybdenum which is essential to the nitrogen-fixing nodule bacteria of legumes.

NOTE: This product may be diluted with water to provide more even coverage of the seed.

FOR IMPROVED MIXING OF PRODUCT WITH SEED, it is recommended that the seed be premixed in a suitable container with the product, then transferred to the planter box. Similar results may be obtained by filling the planter box half full of seed, then adding half the required amount of product, followed by thorough mixing with a stick, and finally, the second half of the seed and product, repeating the mixing.
