**ENVIRONMENTAL HAZARDS**

**SURFACE WATER ADVISORY**

This product may contaminate water through drift of spray in wind. This product has a high potential for run off for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to produce run off that contains this product. A level, well maintained vegetative buffer strip between treating areas and surface water features such as ponds, streams and springs will reduce the potential for contamination of water from rainfall runoff (See manual at the following internet address: <http://www.nrcus.usda.gov/water/quality/common/pestmgmt/files/core4.html>)

Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours.

**GROUND WATER ADVISORY**

Thiamethoxam has properties and characteristics associated with chemicals detected in ground water. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

**ENVIRONMENTAL HAZARDS:**

Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.
