NOTE: New units require flushing to remove carbon fines.

The 10P is capable of treating 250 gallons/900 litres of water.

10P COMPONENTS

There are four basic components to the 10P portable water treatment system.

- A- The POURING CUP is the top cup with the carrying strap.
- B- The FUNNEL CUP acts as a reservoir for the water before it passes into the filter.

C- The SILVER IMPREGNATED ACTIVATED CARBON FILTER is the heart of the unit and is filled with the silver/charcoal media. It is packed upside down for nesting and must be inverted for use.

D- The RECEIVING CUP is the bottom cup. It receives the treated water after it has passed through the filter.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

1. Twist the POURING CUP counter-clockwise and lift off. Inside are nested cups, the SILVER IMPREGNATED ACTIVATED CARBON FILTER and the FUNNEL CUP.
2. Separate the two cups and invert the SILVER IMPREGNATED ACTIVATED CARBON FILTER, placing it on the RECEIVING CUP. The plastic grid in the narrow end should be visible from the top.
3. Now place the FUNNEL CUP on the SILVER IMPREGNATED CARBON FILTER with the wide end up. The narrow end fits inside the collar of the SILVER IMPREGNATED ACTIVATED CARBON FILTER.
