DIRECTIONS FOR USE: It is a violation of Federal law to use this product in a manner inconsistent with its labeling

STORAGE AND DISPOSAL
STORAGE: Keep container tightly closed Protect from freezing Store in a dry place Do not store at elevated temperatures
PESTICIDE DISPOSAL: Do not contaminate water, food or feed by storage or disposal Pesticide wastes are acutely hazardous and/or toxic Improper disposal of excess pesticide, spray mixture, or sludge is a violation of Federal law If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance
CONTAINER DISPOSAL: METAL AND PLASTIC CONTAINERS Triple rinse (or equivalent) Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incinerate or burn if allowed by state and local authorities If burned, stay-out of smoke
FIBER DRUMS WITH LINERS: Completely empty liner by shaking and tapping sides and bottom to loosen clinging particles Empty residue into application equipment Then dispose of liner and drum in a sanitary landfill or incinerate if allowed by state and local authorities Do not reuse empty drum or liner

PULP AND PAPER MILL SYSTEMS
 This product aids in the control of objectionable bacteria and fungi in pulp, paper mill and the additive system, and for the preservation of pulp, pigment slurries, slows, emulsions, adhesives, defoamers, polymers & paper products Additions can be made on a continuous or intermittent basis, depending upon the severity of the contamination
DAILY FOALED SYSTEMS must be cleaned before treatment is begun
FOR SLIME CONTROL
 This product should be added directly to the pulp and paper mill systems Apply at a point in the system where the product will be uniformly mixed
INTERMITTENT OR SLUG METHOD--INITIAL DOSE When the system is noticeably fouled, add this product at the rate of 0.15 to 2.0 pounds per ton of pulp or paper produced Additions to the additive system should be made directly at the rate of 0.1 to 2.0 pounds (12 to 240 ppm) per 1000 gallons in the system Repeat until control is achieved
SUBSEQUENT DOSE When microbial control is evident, add this product at the rate of 0.15 to 2.0 pounds per ton of pulp or paper produced Treat the system as needed to maintain control Additions to the additive system may be reduced to 0.1 to 1.5 pounds (12 to 180 ppm) per 1000 gallons
CONTINUOUS FEED METHOD--INITIAL DOSE When the system is noticeably fouled, add

this product at the rate of 0.15 to 2.0 pounds per ton of pulp or paper produced Additions to the additive system should be made directly at the rate of 0.1 to 1.0 pound (12 to 120 ppm) per 1000 gallons Repeat until control is achieved
SUBSEQUENT DOSE When microbial control is evident, add this product at the rate of 0.15 to 2.0 pounds per ton of pulp or paper produced Treat the system as needed to maintain control Additions to the additive system may be reduced to 0.1 to 1.5 pounds (12 to 180 ppm) per 1000 gallons

FOR PRESERVATION
 This product should be added directly to the material to be preserved prior to manufacturing into the finished product, i.e., pulp, brate, polymers, defoamers, slows, emulsions, adhesives, paper mill coatings, pigment slurries, and paper products The dosage rate will depend upon the material to be preserved and the storage time The usual addition should be 200 to 300 ppm and under extreme conditions of spoilage the dosage rate should be increased to 250 to 800 ppm The above recommendations are based on a maximum storage time of two weeks For storage time greater than 2 weeks, the maximum concentration of this product should be increased to 1000 ppm
 THIS PRODUCT AND ITS USE FOR SLIME CONTROL ARE COVERED BY U.S. PATENT 4,745,132
