

EMERGENCY HANDLING: In case of contamination or decomposition do not reuse container. If possible, isolate container in an open and well ventilated area. Flood with large volumes of water. Dispose of contaminated material in an approved landfill area.

DANGER
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER. Highly Corrosive: May cause skin and eye damage. May be fatal if swallowed. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves when handling. Irritating to nose and throat. Avoid breathing dust. Remove and wash contaminated clothing before reuse.

FIRST AID (PRACTICAL TREATMENT):

IF IN EYES: Hold eyelids open and flush with a steady, gentle stream of water for 15 minutes. Get medical attention.

IF INHALED: Remove victim to fresh air. Get medical attention.

IF ON SKIN: Brush excess chemical off skin. Wash with cold water for at least 15 minutes. Get medical attention if irritation persists.

IF SWALLOWED: Drink promptly large quantities of water. Avoid alcohol. Do not induce vomiting. See a physician immediately. Note to physician: Probable mucosal damage contraindicate the use of gastric lavage.

CHEMICAL HAZARDS. DANGER: Strong oxidizing agent. Use only clean, dry utensils. Mix only into water. Contamination with moisture, dirt, organic matter or other chemicals (including other pool chemicals) or other foreign matter may start a chemical reaction with generation of heat, liberation of hazardous gases and possible generation of fire and explosion. Avoid contact with flaming or burning material such as a lighted cigarette. Do not use this product in any chlorinating device which has been used with any inorganic or unstabilized chlorinating compounds (e.g. calcium hypochlorite). Such use may cause fire or explosion.

ENVIRONMENTAL HAZARD: This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or public waters unless this product is specifically identified and addressed in a National Pollutant Discharge Elimination System Permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

AQUA CLEAR® AQUA-CHLOR®

CHLORINATING SANITIZER

Active Ingredient:	
Lithium Hypochlorite.....	29.0%
Inert Ingredients	71.0%
Total	100.0%

Available Chlorine 35%

KEEP OUT OF REACH OF CHILDREN
DANGER
SEE SIDE LABEL FOR FIRST AID
& PRECAUTIONS

EPA Reg. No. 45309-58
EPA Est. No. 45309-NY-01

Manufactured by:
Aqua Clear Industries, Inc.
P.O. Box 5430 ♦ Albany, NY 12205

Net Weight: 25 lbs.

DIRECTIONS FOR USE
USE ONLY AS DIRECTED

It is a violation of federal law to use this product in a manner inconsistent with its labeling. This product is designed to dissolve quickly and completely providing a steady source of available chlorine in swimming pools to control the growth of algae, kill bacteria and destroy organic contaminants.

READ THE PRECAUTIONARY STATEMENTS BEFORE USE

How to use this product: To start your pool: Back wash filter. Adjust the pH of the pool water to between 7.2 and 7.6 as determined by a suitable test kit. Add soda ash or sodium bicarbonate to correct an acid condition (less than 7.2). Add sodium bisulfate if the pH is greater than 7.6. Maintain pH range of 7.2 to 7.6 for six hours before the addition of this product and during the entire season. Use two cups of this product per 5,000 gallons of pool water.

After the proper pH range and chlorine residuals have been established, it is beneficial to add a chlorine stabilizer (cyanuric acid) to the pool to prevent extreme fluctuations in the chlorine level. Cyanuric acid available at most pool dealers should be added in accordance with the instructions on the package for maximum stabilization of the pool water.

How To Maintain the Proper Chlorine Residual: The chlorine residual should be maintained at between 1.0 and 1.5 ppm, available chlorine as determined by the chlorine test kit. Under normal conditions, this residual can be maintained by the daily addition of 1/3 cup (2.7 oz.) of this product for each 5,000 gallons of pool water - If the pool water is properly stabilized with 30 to 50 ppm of cyanuric acid pool stabilizer. Severe conditions, such as high temperature, continued use by many people will require a higher daily dosage, whereas smaller doses may suffice in the spring and fall when the pool is not being subjected to normal bather loads.

The pool water should be superchlorinated about once each week. Five times the normal daily addition, or a minimum of one cup (8 oz.) per 5,000 gallons of pool water should be added in the evening when the pool will not be used for a minimum of 12 hours. Test the chlorine residual and if above 2.0 ppm, do not allow swimming until the residual has decreased.

STORAGE AND DISPOSAL: Keep product dry in tightly closed container when not in use. Store in a cool, dry, well ventilated area away from heat or open flame. Do not reuse empty container. Rinse empty container thoroughly with water to dissolve all material before discarding. Securely wrap container in several layers of newspaper and discard in trash.
