HARRISON'S AMERICAN BACTERIOSTATIC WATER FILTERS

Informational water filter is a must for every home. It is the only filter that...

Drinking water can, by law, contain a number of harmful substances not found in municipally treated water.

Harrison's American Bacteriostatic Water Filter uses a special type of active carbon and other material in all filters. The unique material is an environment of protection Agency Registered Bacteriostatic Water Filter Media. This material is known as a silver impregnated granular activated carbon.

Harrison's American Bacteriostatic Water Filter improves the water quality of most municipally treated water. It will remove the chlorine taste, odor, and color and thus provide you and your family with clean, good-tasting water for drinking or cooking.

Harrison's American Bacteriostatic Water Filter takes only minutes to install. There are no filters to change.

We will be happy to have a free home demonstration of Harrison's American Bacteriostatic Water Filter in your home.

Write or call for a free demonstration.
