EPA REG. NO. 45458-6

EPA EST. NO. 45458-OH-1

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER: Highly corrosive. Causes skin and eye damage. May be fatal if swallowed. Do not get in eyes, on skin, or on clothing. Do not handle with bare hands. Wear goggles or face shield and use rubber gloves or only thoroughly clean, dry utensils when handling. Irritating to nose and throat. Avoid breathing dust and fumes. Remove and wash contaminated clothing before reuse.

FIRST AID (Practical Treatment):

If swallowed: Feed large amounts of milk and/or water and induce vomiting. Call a physician immediately.
If on Skin: Brush off excess chemical and flush skin with cold water for at least 15 minutes. If irritation persists, get medical attention.
If in Eyes: Flush with cold water for at least 15 minutes. Get immediate medical attention.
If inhaled: Remove person to fresh air. Get immediate medical attention.

CHEMICAL HAZARDS

DANGER: Strong oxidizing agent. Use only clean, dry utensils. Mix only into water. Contamination with moisture, dirt, organic matter or other chemicals (including other pool chemicals) or any other foreign matter may start a chemical reaction with generation of heat, liberation of hazardous gases, and possible generation of fire and explosion. Avoid any contact with flaming or burning material, such as a lighted cigarette. Do not use Swimming Pool concentrated chlorinating Tablets in any chlorinating device which has been used with any inorganic or unstabilized chlorinating compounds (e.g. calcium hypochlorite). Such use may cause fire or explosion. Do not permit tablets to contact plastic pool linings or metal objects. Do not throw tablets directly into pool.

ENVIRONMENTAL HAZARD:

This product is toxic to fish. Do not contaminate lakes, ponds or streams by cleaning of equipment or disposal of wastes.

ADDITIONAL POOL CARE RECOMMENDATIONS:

pH-Maintaining-pH in the ideal range of 7.2-7.6 is extremely important to the efficacy of your chlorine and swimming comfort. Test for pH often with a suitable test kit. Adjust pH as necessary, using products such as "Swimming Pool pH Plus or Swimming Pool pH Minus."
Superchlorination-Superchlorination with a calcium hypochlorite product is recommended to burn out the organic material your filter can't handle and keep your water sparkling clear. Use as directed on the label, especially during excessive heat, when bathings loads are high, when water becomes dull looking or hazy, when there is a "chlorine-like" smell or excessive eye irritation, or after heavy rains.
Shock Treatment-If algae appear, shock treat your pool with a calcium hypochlorite product. Follow label directions. An alternate method is to add 28 Swimming Pool concentrated chlorinating Tablets (approx. 14 oz.) in the skimmer for each 10,000 gallons of water. Run pump and filter until totally dissolved (approx. 1 1/2 days). Thoroughly clean pool by scrubbing surface of algae growth, vacuum and cycle through filter. Pool should not be used until chlorine residual is from 1.0-3.0 ppm.

TO DETERMINE POOL CAPACITY:

Rectangular Pools: Multiply length x width x average depth x 7.5 = pool capacity (U.S. gallons).
Round Pools: Multiply radius (1/2 diameter) x radius x average depth 23.5 = pool capacity (U.S. gallons).

Swimming Pool

concentrated chlorinating

TABLETS 1"

Stabilized for extended chlorine life
Slow Dissolving, Completely Soluble

Active Ingredient:

Trichloro-S-Triazinetrione	99%
Inert Ingredients	1%
Available Chlorine	89%

DIRECTIONS FOR POOL USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Swimming Pool concentrated chlorinating Tablets containing 89% available chlorine, are designed to dissolve slowly (up to several days) and provide a steady source of available chlorine in swimming pools. Tablets control growth of algae and effectively kill many bacteria, thus helping to keep the pool in a sanitary condition. One tablet weighs approximately 1/2 ounce. If any chlorine residual is present, it is possible to increase the residual in pool water by 0.7 ppm by using two tablets per 10,000 gallons of water.

For best results, use a dissolving basket, a floating container, or add the tablets to a plastic leaf strainer in the surface skimmer. Do not permit tablets to contact plastic pool linings or metal objects. Do not throw tablets directly into pool. Use only in skimmer or floater which has been thoroughly cleaned. Do not mix with other chemicals in skimmer or floater.

START UP

In a clean pool with no visible algae, bring chlorine residual to 1.0-1.5 parts per million (ppm) as follows:

1. For each 10,000 gallons of water, add four Swimming Pool concentrated chlorinating Tablets (approx. 2 oz.) in a plastic leaf strainer in the surface skimmer.
2. Run pump and filter until totally dissolved (approx 1 1/2 days).
3. Test for chlorine residual, using a suitable test kit.
4. If chlorine residual is below 1.0 ppm, continue to add Swimming Pool Tablets at a rate of one per 10,000 gallons, wait until dissolved and check residual. Pool can be used when residual is between 1.0 and 3.0 ppm.
5. The day after the pool's chlorine residual reaches 1.0-1.5 ppm use cyanuric acid (e.g. Swimming Pool Stabilizer) to stabilize your pool. Follow label directions. Adjust pH to the ideal range of 7.2-7.6.

REGULAR CARE

Use four Swimming Pool concentrated chlorinating Tablets (approx. 2 oz.) for each 10,000 gallons of water every other day or as needed to maintain the pool's chlorine residual from 1.0-1.5 ppm. Use in skimmer or floater.

STORAGE AND DISPOSAL: Keep product dry in tightly closed container when not in use. Store in cool, dry, well-ventilated area away from heat or open flame. Do not reuse empty container. Rinse empty container thoroughly with water to dissolve all material before discarding. Place in trash collection or dispose in approved landfill area or bury in a safe place.

EMERGENCY HANDLING: In case of contamination or decomposition, do not reuse container. If possible, isolate container in open and well-ventilated area. Flood with large volumes of water. Dispose of contaminated material in an approved landfill area or bury in a safe place.
