It is important that you read all the directions on this label and follow them carefully. Do not use this product if you have actually contact with a living insect.

#### STATEMENT OF FIRST AID TREATMENT

If swallowed: Call a physician or Poison Control Center, drink plenty of water.  
If inhaled: As with any freshly coated surface get plenty of fresh air.  
If on skin: Wash with water.  
If in eyes: flush with plenty of water. Get medical attention if irritation persists.  
Note to Physician: Chlorpyrifos is a cholinesterase inhibitor. Treat symptomatically. Atropine, only by injection, is the preferable antidote.

#### ENVIRONMENTAL HAZARDS

This product is toxic to fish, birds and other wildlife. Do not contaminate water by cleaning of equipment or disposal of wastes. Do not apply directly to water. Apply this product only as specified on this label.

#### PHYSICAL HAZARDS

( Should not be mixed with water or paint solvents, not diluted in any manner.

#### DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. All loose paint, whitewash, dirt, mildew, oil and other contaminants must be removed to insure a clean surface. This product is supplied ready to use after stirring thoroughly. For interior home use, this product should be applied by brush or rolled on target areas as stated on the front part of this label in the form of a band a few inches in width to obtain an even coat covering approximately 425 s.f. per gallon. For uses other than interior home application, apply with brush, roller or spray. Wash brush, roller or spraying equipment thoroughly with soap and water after use. As contact between the insect and coated surface is necessary, any time that the latter becomes covered with dust or dirt, the coated surface should be washed with clear water in order to re-establish maximum possible contact.

BACKLABEL - (Continued)

DIRECTIONS FOR USE - (Cont'd.)

FOOD HANDLING ESTABLISHMENTS: (Places other than private residences in which exposed food is held, processed, prepared or served) including, but not limited to bars, restaurants, food stores, bakeries, bottling plants, canneries and grain mills. Application shall be limited to (paint-on) spot treatment and/or crack and crevice treatment. For crack and crevice treatments, equipment capable of delivering a pin stream of insecticide should be used.

FOOD MUST BE REMOVED OR COVERED DURING TREATMENT.

SPOT APPLICATION controls cockroaches, ants, crickets, silverfish and spiders and aids in the control of pantry pests in and around both food and non-food areas. Apply INSECTA with a 3" to 4" brush, roller, or handled sponge applicator to localized areas where these pests have been seen or are suspected of hiding or entering. Apply only enough to wet the surface. Avoid runoff. Do not allow the insecticide to contact food or food processing surface. Areas to be treated include baseboards, moldings, around plumbing and other utility installations, dark corners and closets, and around doors, ventilators, windows and other openings. Apply adjacent to tin panelling or other material loosely attached to walls. Completely band the undersides of work tables and storage shelving but never on the exposed work-storage surface. Remove all drawers and band the three exterior sides but never the interior or front. Floor drains, garbage rooms and locker rooms should be included in treatment. Treated surfaces should not be washed or cleaned for 36 hours after application.

CRACK AND CREVICE TREATMENT: should be made by applying INSECTA as a coarse, low pressure (20 PSI or less) spray with equipment capable of delivering a pin stream of insecticide directly into openings leading to voids and hollow spaces in walls, equipment legs and bases or at points that occur between different elements of construction or especially where equipment joins floors and walls. An applicator fitted with needle injector or equipment capable of delivering a pinstream of insecticide should be used. Use equipment with plastic rather than rubber hose since the solvents in the insecticide may cause collapse of the rubber. Prior to application de-energize equipment and allow time for solvent to evaporate before starting motors or placing in "ON" position. Do not apply INSECTA on or near flames or heated surfaces.

Caution: INSECTA covers approximately 425 sq. ft. per gallon. Dries quickly and rinses easily with water. Allow to dry for several days before washing. Wash brush, roller or spraying equipment thoroughly with soap and water after use. As contact between the insect and the coated surface is necessary, any time that the latter becomes covered with dust or dirt, the coated surface should be washed with water in order to re-establish maximum possible contact. INSECTA applied on exposed glass, glazed tile, metal, or other non-porous surfaces may dry leaving a light film.
