USE ON PEARS: MITAC WP is an insecticide for use on pears. When applied as directed, MITAC WP will control pear psylla. MITAC WP can be applied by air or ground equipment, as dilute or concentrate sprays. The rate of MITAC WP per acre is based on thorough coverage with a dilute spray of 400 gallons from a conventional sprayer.

When using concentrate sprayers, the amount of water is reduced but the amount of MITAC WP per acre should remain the same as when using dilute sprays.

COMPATIBILITY: MITAC WP is compatible with most commonly used pear insecticides, miticides and fungicides; however, do not combine MITAC WP with detergents, sulfur, Bordeaux mixture, NAA or other highly alkaline materials as a tank-mix.

CAUTION: DO NOT GRAZE TREATED AREAS

PEAR PSYLLA: Apply 1½ to 3 pounds MITAC WP per acre. Where full dilute coverage requires less than 400 gallons per acre, use 6 to 12 ounces per 100 gallons.

For postbloom control, apply MITAC WP as needed. Best control will be obtained when the majority of pear psylla are in the adult or young nymphal stages of development.

Rate should not exceed 3 pounds of MITAC WP per acre per application. Do not apply within 7 days of harvest. Do not apply more than 6 pounds per acre of MITAC WP during the use season.
