TREATMENT

Spray the animals until the mixture runs off, paying particular attention to treat the jaw, legs, inside the ears and underside of the body. Apply treatments as stated below, making sure to treat each animal.

CONTROL PROGRAM

Mix one QUART CAN (760 ml) of TAKTIC in 50 gallons water or one PINT CAN (380 ml) in 25 gallons water. For smaller quantities of spray, mix 2 fl. ounces with 3 gallons water. A sprayer with a coarse nozzle, delivering the solution at a minimum of 200 psi, is recommended. Spray the walls, floor, and any fittings in the pen. Spray animals (at the same time) whether visibly affected or not. Repeat the treatment 7-10 days after the first treatment has been made.

MAINTENANCE PROGRAM

Begin the maintenance program only after the double treatments have been made. Mix as described above. Apply with a conventional type sprayer and treat animals as recommended below.

1. Spray sows in their stalls before being transferred to farrowing pens.
2. Dip (see below) or spray young pigs at weaning or before moving to fattening houses.
3. Spray sows in their farrowing pens before being transferred back to sow stalls.
4. Isolate and spray any new or additional animals with the two initial treatments before mixing with the other animals.
5. Spray boars every 2 or 3 months.

FOR DIPPING PIGLETS

Dip piglets (weaners) in a suitable size container. Dip 30 animals and then replace dip wash. Use dip wash to treat premises.
