GENERAL INFORMATION:

Jobe's Spikes with Subdue Fungicide are an effective way to control Phythium and Phytophthora fungi on nursery, greenhouse, interiorscape, and landscape plants while providing continuous feeding. Jobe's unique patented slow-release formulation provides systemic disease control and nutrition for up to sixty days. Soil moisture gradually dissolves the spike, releasing a powerful systemic fungicide as well as a special balance of primary nutrients. The fungicide and nutrients enter the plant through the roots, and are translocated to all parts of the plant to feed and protect.
