is used to control algae and bacteria in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime, and other deposits. An initial slug addition of 3.3 to 6.6 fluid ounces of CT-261 per 1000 gallons of water is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 1.1 to 6.6 fluid ounces of CT-261 per 1000 gallons of water should be employed every 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
