FINE SPRING BACTEROIOSTATIC WATER FILTER
Under Sink Unit, Model US-1

ACTIVE INGREDIENT:
Metallic Silver: .................................................... 1.05
INERT INGREDIENT: ................................................ 99.95

KEEP OUT OF REACH OF CHILDREN
CAUTION

EPA REG. NO. 46777-N-7
EPA EST. NO. 46777-N-7.1

DISPOSAL: Wrap spent filter in newspaper and discard with trash.

In addition to seeing the enclosed circular and information and installation instructions.

This filter is only to be used in conjunction with municipally treated tap water in the home.

INFORMATION AND INSTALLATION INSTRUCTIONS ON FINE SPRING BACTERIOSTATIC WATER FILTER, Under Sink Unit, Model US-1

DIRECTIONS FOR USE

General Classification

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Once a unit has been installed as per instructions, it should be maintenance free and no filter cartridges to replace. This unit has a capacity of up to 3,000 gallons. It is capable of treating 3.0 gallons of cold tap water daily for a period of 36 months. Towards the end of the 36 months (3 years), you will notice a diminishing water flow. This will indicate the filter is nearing the end of its useful life.

Installation

Remove arator from faucet. Screw on diverter attachment. If the adapter supplied does not fit, different sizes are available at hardware stores. The diverter valve button allows you to select filtered water or regular tap water. Run water through the filter for 20 minutes after installation, to acclimate. Every six months, remove bottom plug and run water through filter to flush.

Instructions for Under-the-Sink Model Installation

Follow these simple instructions to install permanent Fine Spring water filtering system:

1. Locate a convenient position on the back of the sink for permanent faucet location. Before you drill, check under the sink to make sure the hoses will reach all connections.

2. After determining the position is okay, drill a 1/2 inch hole through the sink. Use a hard tipped glass bit for porcelain and a regular metal bit for stainless steel.

3. Set the FAUCET ASSEMBLY in the hole as shown in ILLUSTRATION 1, then tighten NUT A on the threaded extension to secure faucet assembly to sink.

4. Place ADAPTOR B on the threaded extension and tighten. Make sure the small copper flange is located inside the adaptor. If not, the connection will leak.

5. Place ADAPTOR C on the end of Adaptor B. Make sure the copper eylet is positioned inside Adaptor C. Insert one end of OUTLET HOSE into the adaptor and tighten. Be careful not to overtighten. The hose will fit into the adaptor approximately 1 inch.

6. Mount FINE SPRING FILTER CARTRIDGE to wall or wood framing under the sink within reach of the faucet and the cold water line. Install other end of OUTLET HOSE to the Cartridge and tighten fitting, making sure plastic eylet is properly positioned. Make sure the hose is attached to the outlet side of the filter cartridge.

7. Place CLAMP-VALVE on the cold water copper line as shown in FIGURE 2 and tighten the clamp nut. Do not turn T Handle yet. Make sure INLET HOSE D will reach the inlet side of the filter.

8. Install INLET HOSE D on the Filter/Cartridge and secure with fitting as in step 6 above.

9. Tighten VALVE-CLAMP ADAPTOR E on the Valve Clamp. Make sure the plastic washer is positioned inside to prevent leaks. Insert Inlet Hose into ADAPTOR F and tighten on Valve Clamp Adapter E. Make sure copper flange is properly located inside the adaptor. Check to see that all connections are correct.

10. Now turn T Handle on the Clamp-Valve all the way in. A small metal pin will penetrate the copper water line. The Clamp Value is self-sealing - there should be no leaks, since a rubber gasket located inside the clamp will automatically seal the puncture. Back off T Handle until water begins to flow through faucet. Hold faucet lever down while adjusting T Handle to obtain natural, smooth water flow. Don't allow water to gush through filter, as this is not desirable for maximum filtration. Check for leaks, and enjoy Fine Spring pure water.

This unit should be used with cold water only. The flow rate has been preset at the factory not to exceed 1/2 gallon per minute.
