DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Stir well before using.

A-3390 SAVANNAH VINYL COPPER ANTI-FOULING PAINT is suitable for application to properly prepared and primed wood, steel, aluminum and fiberglass vessels subject to attack by barnacles, algae, tube worms and other fouling organisms. It should be used on bottoms which will receive constant immersion in medium to high salinity sea water.

The surface must be clean and dry prior to paint application. Where priming of steel or aluminum is needed, use Savannah P-111MR Viking Yellow Epoxy Primer. Where priming of wood or fiberglass is needed use Savannah A-553 Viking Epoxy Primer Surfacer. Topcoat epoxy primers within 72 hours. Surfaces in good condition do not need to be primed. Roughen the existing surface sufficiently with abrasive paper to insure a good bond. 120 grit paper is normally used. Before applying to old paint, apply a small test patch to insure adhesion.

Application can be by spraying, brushing or rolling. Airless spray is strongly recommended if spraying is chosen. A minimum total dry film thickness of 5 mils is recommended. Two coats are generally required. Four hour drying time should be allowed between coats. At 5 mils dry film thickness a gallon of paint will cover approximately 177 square feet. Clean up with Savannah Vinyl Solvent.

Allow a minimum of 2 hours dry time prior to launching. Longer exposure to air will not decrease effectiveness of the coating.
