DIRECTIONS FOR USE: Before using, adjust stabilizer to 40-60 ppm with RAM STABILIZER. Maintain one (1) 3" TABLET per 10,000 gallons by placing either into your swimming pool floating dispenser or directly into skimmer basket. Use more or less TABLETS in order to maintain a free chlorine residual of 1.0 to 1.5 ppm. This product can be used in any dispenser or automatic chlorinator that uses chlorine concentrate 1" TABLETS, 3" Tablets or sticks. DO NOT MIX with any other kind of chlorine as an explosion may occur. DO NOT THROW TABLETS directly into or on a vinyl or fiberglass pool as bleaching may result. See below for superchlorination.

START UP: When starting up a reopened or freshly filled pool or spa make sure the filtration system is clean and operating properly. Then adjust and maintain the pH in the range of 7.4-7.6 using RAM pH MINUS or RAM pH PLUS as indicated by a reliable test kit. Adjust and maintain total alkalinity 80-125 ppm (spas 140-180 ppm). Next day stabilize between 40-60 ppm using RAM STABILIZER at about 1 lb. per 5,000 gallons (Not required for spas). Bring chlorine reading up to 3.5 to 5 ppm by superchlorination. Next day apply this concentrate chlorine as directed. Do not use pool (or spa) until the chlorine residual has dropped below 3.0 ppm.

SUPERCHLORINATION: Use 1 lb. SHOCK per 10,000 gallons, every 10 to 14 days by broadcasting in pool (Gunite only). DO NOT put into skimmers as other chemicals may be present. This procedure may be necessary more often if algae appears, eye burns, chlorine odors, heavy rains, higher bather loads or hotter pool water are present.

Reentry into treated swimming pool/spas is prohibited above levels of 3 ppm of chlorine.
