**"FOR SWIMMING POOL CHLORINATION
AND SANITIZING."**

ACTIVE INGREDIENT
SODIUM HYPOCHLORITE 9.25%
INERT INGREDIENTS 90.8%

**KEEP OUT OF REACH OF CHILDREN
DANGER**

FIRST AID: If on skin, wash with plenty of soap and water. If in eyes, flush with water for at least 15 minutes. Get medical attention if swallowed. drink large quantities of milk, or gelatin solution or, if these are not available, drink large quantities of water. Do NOT give vinegar or other acids. Do NOT induce vomiting. Get prompt medical attention.

See additional precautions on side panel

**DIRECTIONS FOR USE
GENERAL CLASSIFICATION**

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT
IN A MANNER INCONSISTENT WITH ITS LABELING

DIRECTIONS FOR SWIMMING POOL CHLORINATION
For a new pool or for starting up a superchlorinator in one (1) part (16 fl. oz.)
this sodium hypochlorite solution for each 2500 gallons of water. This dosage is equivalent to 5 ppm available chlorine by weight.

For pool Maintenance:
A. Adjust pool water pH to 7.2 to 7.4 and maintain.
B. Add chlorine by either a feed line or drop a sodium hypochlorite solution at a rate maintained at a rate of 1/2 to 1/4 ppm. One half pint (8 fl. oz.) of this sodium hypochlorite solution for each 6000 gallons of water will provide approximately 1/2 ppm available chlorine. Frequency of addition to maintain 0.6 to 0.8 ppm available chlorine will depend upon temperature and number of swimmers. Use test strips to take care. The游and chlorine residues must be in the proper ratio.

**DIRECTIONS FOR DISINFECTION OF POTABLE WATER
FOR HOME WELL WATER SYSTEMS**

Discharge sodium hypochlorite solution in the ratio of one part sodium hypochlorite to nine parts of treated water. Mix sodium hypochlorite solution and water thoroughly and begin treating disinfection in a hypochlorinator (metering pump). Meter a free available chlorine residual of at least 0.2 ppm and no more than 0.6 ppm throughout the distribution system as determined by a DPD chlorine test kit. Back-up chlorine sample must be conducted at a frequency no less than that prescribed in the National Interim Primary Drinking Water Regulations. Check water frequent with a DPD chlorine test kit.

Contact your local Health Department for further details.

DIRECTIONS FOR SANITIZING FOOD PROCESSING OR DAIRY EQUIPMENT
Clean equipment in the normal manner. Just before using, rinse surfaces thoroughly with 1/2 sodium hypochlorite solution containing 200 ppm available chlorine. Maintain contact with disinfectant for a minimum of two minutes. Do not rinse with water after treatment with sodium hypochlorite solution. Do not soak overnight. Add one fluid oz (12 to 16 g) this sodium hypochlorite solution per 4 gallons of water to provide approximately 200 ppm available chlorine by weight.

NOTE: This product degrades with age. Use a chlorine test kit and increase dosage as necessary to obtain the required level of available chlorine.

STORAGE AND DISPOSAL
Store in cool dry area away from direct sunlight. In case of split flood area with large quantities of water, mix empty container thoroughly with water and either return to manufacturer or dilute by placing in fresh collection or burying in an approved tank. If product or packaging cannot be used, should be diluted with water and disposed of in a sanitary sewer. Do not contaminate food or feed by storage, disposal or cleaning of equipment.
