**For Use In Mink Feed
To Prevent The Development Of Fly Larvae
In The Droppings Of Treated Mink**

General Description

When fed to mink, Rabon passes through the digestive system into the droppings where fly larvae are killed on contact shortly after the fly eggs hatch. Rabon helps to control the development of house flies and blow flies but should not be used as the sole method of fly control.

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product will mix uniformly in mink feeds when standard mixing procedures are followed. It is recommended that appropriate preblending techniques be employed to assure adequate distribution of this product throughout the feed mix. It should be preblended with soybean meal, alfalfa meal, mineral mix, etc. before being added to other ingredients. Common feed mixing equipment (i.e. vertical mixers, horizontal blenders) may be used to prepare formulated feeds.

This product should be added to the total feed at a rate that will ensure that each animal will consume 3 mg/kg of body weight (1-2 mg/pound) per day. Use the following table as a guide.

Mixing Directions

Pounds of Food Consumed per Animal per day	Pounds of Rabon 7.76 Oral Larvicide Premix in Food		
	500 Lb.	1000 Lb.	2000 Lb.
0.10	0.8	1.6	3.2
0.25	0.3	0.6	1.2
0.33	0.25	0.5	1.0
0.5	0.2	0.4	0.8
0.75	0.1	0.2	0.4
1.00	36 gram	72 gram	140 gram

Start feeding this larvicidal feed early in the spring before flies begin to appear and continue to feed throughout the summer until cold weather restricts fly activity. In some cases supplemental fly control measures may be needed in and around the animal facilities and feed building to control adult flies, especially house flies that can breed in many kinds of organic matter. Blow flies breed on dead animal or meat from dead animals.

In order to achieve optimum fly control this product should be used in conjunction with other fly management and sanitation practices.

Note: It is important to read and observe the cautionary statements and all other information appearing on the Rabon 7.76 Oral Larvicide Premix label. Use only as directed.

Note: This labeling must be in the possession of the user at the time of pesticide application.

- b. Upper and lower limits must also be stated for each intentionally added inert ingredient. In addition, please include a brief discussion as to how these limits and those for the active ingredients were established. Ideally, active ingredient limits anticipate that most limits for intentionally added inert ingredients will be based on the precision of your weighing procedures rather than analyses.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA sec. 6(e). Your release for shipment of the product constitutes acceptance of these conditions.

A stamped copy of the label is enclosed for your records.
